

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. TO

MY DEAR AND HONORED FRIEND,

SIR JOHN GOSS, Mus. D.,

WITHOUT WHOSE NAME

NO HISTORY OF MODERN MUSIC CAN BE COMPLETE,

This little Book

IS,

WITH EVERY FEELING OF RESPECT AND AFFECTION,

INSCRIBED.

December, 1877

PREFACE TO THE SECOND EDITION.

THAT a new edition of this little work should be called for within three months of its first appearance affords gratifying evidence that it has met—to some extent, at least—an acknowledged want among students of music.

In response to the general invitation with which I concluded my “Introductory” Chapter, several correspondents have favoured me with corrections and suggestions of which I have thankfully availed myself. Accordingly, a few minor names and matters have been added or substituted for others. The general plan and the bulk of the work, however, remain the same as before.

I cannot let this occasion pass without expressing my sincere obligations to those gentlemen, the majority of them musicians of acknowledged learning and eminence in the art, who have assisted me in the careful preparation of this Second Edition for the press.

H. G. B. H.

March, 1878.

INTRODUCTORY.

THE plan of this little History is so distinct—as far as I am aware—from that of any other work upon the same subject, that a careful perusal of these prefatory explanations will greatly help the reader in his study of the book. It would be more correct to say that all previous Histories of Music are distinguished from the present effort in the respect that they have no plan at all, beyond the two very general features of chronological order (rarely adhered to) and a grouping of composers and events into a number of “schools.” The voluminous works of Burney and Hawkins each form a mass of promiscuous and ill-digested matter, which requires much sifting and collating on the part of the student before he can arrive at the information he requires; while, as both works are now a century old, they stop short of the most productive as well as the most interesting period of musical history. The smaller histories of Hogarth, Schlüter, Ritter, and others, though admirably adapted for the purpose for which they were originally compiled, are still no more than courses of popular lectures, in which much that is naturally

required for a student at a musical examination, is necessarily omitted.

The classification adopted in the following pages is the result of many trying experiences as a student, whose chief difficulty has been the separation of the subjective from the objective divisions of the study. To a certain extent the one is necessarily wedded to the other, and I have recognized this where necessary,—yet without disturbing the general plan, which I will now proceed to describe.

The book is divided into Three Sections.

The First Section contains a general review of musical epochs and events, including short biographical sketches of the principal characters concerned, with an enumeration of their most important works. The principle of chronological order has been observed, yet not slavishly, as sometimes it would have seriously interfered with the general plan, without yielding an equivalent advantage. A palpable difficulty has been the classification of the "schools." The term "school" is so ambiguous, and has been employed in so many senses, that the student is frequently at a loss when asked to define any one of them. There are the "Belgian" or "Flemish," the "Roman," the "Venetian," the "Neapolitan," the "Spanish," the "German," the "French," the "English" schools; and these terms have respectively been variously and indiscriminately used to denote either a group of composers of the same nationality, or a distinguishing style of musical composition. Again, as to the latter interpretation of the term, the student, in the course of his reading, is liable

to a new bewilderment with every succeeding work he is led to peruse. Some writers adopt the above classification; others speak broadly of two great contrasting schools—the Italian and the German; others, again, add to these two the French and the English schools; while a fourth section will deny or ignore the existence of the English school *in toto*. In order to disencumber the mind of such perplexities as these, I have generally adopted the method of classification by nationality; and have included the Roman, Venetian, and Neapolitan groups under the common head of “Italian.” On an examination of the text of the first section, the reader will notice that beyond paragraph 18, every paragraph, with a few exceptions, is headed with an initial letter enclosed in brackets. Each initial letter denotes the division to which the matter that follows it belongs; viz., B., Belgian; I., Italian; G., German; E., English; F., French. These paragraphs are so worded that the reader, according to his requirements, may trace the course of any particular “school” without interruption. Thus, if at any time he wish to confine his attention to the succession of English composers, he will look for the first paragraph headed by the initial E., after which his eye will easily and rapidly guide him to the second and further paragraphs bearing the same initial letter. And as far as the succeeding paragraphs of each denomination are concerned, the chronological order will be found intact.

The Second Section comprises a series of Chronometrical Tables or Charts, the first Chart containing 1000 years, the succeeding Charts 100 years. Each

Chart is duplicated, and the duplicates are placed on opposite pages. The right hand duplicate contains the names of musicians and historians, while that on the left hand is devoted to the corresponding epochs and events. As in a geographical map the relative positions of towns or counties may be seen at a glance, so in this Chronological map the student may see pictured before him, upon a very simple plan, the time-relationship of persons and events,—persons with persons, events with events, and events with persons. For this admirable scheme I am indebted to my able and learned friend, Mr. David Nasmith, LL.B., whose Chronometrical Chart of English History has formed the model for these tables. The study of History, with its legion of miscellaneous facts and disjunct dates, has by this invention been rendered far less irksome and more definite, and it is a matter for regret that Mr. Nasmith's valuable Chart is not to be found on the walls of every school-room in England, notwithstanding the earnest recommendations of Brougham, Thiers, Carlyle, and other eminent historians.

The Third Section summarizes the history of the art itself, unencumbered by the necessity of tracing the career of any composer referred to in the course of the text. It deals (1) with the birth and development of the modern scales, counterpoint and harmony ; (2) with the history of choral music, ecclesiastical and secular ; (3) with instrumental music, and the development of the now classical forms of composition ; (4) with musical instruments, ancient and modern ; and enumerates (5) some of the principal works of each important

class, together with the names of composers, arranged in approximate chronological order.

The student is warned that he is not to expect in this what is called a "readable" book ; it has been written with a view to systematic study, and not for mere entertainment,— in short, it is a text-book, not a discourse. To this end I have endeavoured throughout to restrict myself to matters of fact, every digression being an attempt to throw light upon facts disputed or uncertain. These pages, then, are not intended for consecutive perusal, but for sectional study ; each division, while maintaining a relation with the whole, being complete as to its own subject. I would therefore recommend, first, a cursory perusal of the work from beginning to end, in order to master the plan and gain a general idea of the contents ; secondly, to select any school or period treated of in the General Summary ; thirdly, to refer, as occasion may require, to the corresponding text of the Art Summary ; and lastly, to consult the Chronometrical Tables for the period in question—or, better still, to copy out such Tables upon a separate sheet, and upon a larger scale, that they may lie immediately in front of the student while he is reading. Each of the sections may be studied as a principal text, and compared with the other sections in the same way. For example, if the student take for his subject the growth and development of the Sonata form, he will read Section III., paragraphs 26—28 ; if he wish for particulars respecting the principal composers mentioned in par. 28, he will refer to Section I. ; who were contemporary writers of Sonatas he will ascertain

at a glance from the Tables in Section II. ; and so on, *mutatis mutandis*, according to the nature of the subject in hand. The student is thus enabled to take a more or less comprehensive view of any subject in proportion to his individual requirements. The miscellaneous questions at the end of the book have been added as an assistance to students preparing for examinations.

Having, by a systematic study of these pages, possessed himself of the principal facts of Musical History, the student will be the better able to understand and appreciate the more critical writings of other historians, and to every advanced student such reading is recommended as an after course.

Lastly, in a work containing an enormous number of facts and dates, some of them controverted or otherwise uncertain, it is to be feared that occasional discrepancies, real or apparent, may be found. I shall be grateful to any reader who will communicate to me any such errors or discrepancies, with a view to correction upon the first opportunity. As to omissions, the necessary limits of the work have precluded the insertion of many names and particulars of secondary importance, but I hope and believe that the information supplied is amply sufficient for the needs of the ordinary student of music.

Trinity College,
London, W.

HISTORY OF MUSIC.

SECTION I.

GENERAL SUMMARY.

1. WHILE in the works of many of the ancient writers the subject of Music has been dwelt upon at more or less length, it is impossible for us to form upon their statements or passing allusions an exact idea of the character or extent of the art as practised in the days of the Egyptian, Grecian, and Roman empires.*

2. With regard to the musical scales of the Greeks, all that we really know is :—That they were built on a system of *tetrachords*—or groups of four notes ascending in diatonic succession ; that, familiarly speaking, two of these tetrachords put together formed a “scale ;” that there were various kinds of scales, differing in nature from each other in respect of the relative positions occupied by the semitones ; and that, therefore, the effect of the music, whether melody or harmony produced from such scales, was entirely different from that of the present day.

3. It is generally believed that the Greeks originally derived the rudiments of their musical knowledge from the Egyptians, who were great proficient in the art, as

* “In short, there can be no history of music as an art, where no musical works of art exist.”—SOHLÜTER.

may be seen from the monumental remains of that splendid nation. Upon a number of these monuments are representations of harps, lutes (or guitars), and other instruments; bands of musicians performing concerted music; but in the nature of things there is no source from which we may gain any notion as to the effect or character of the music produced.

4. There has been much discussion on the question whether harmony was known to, or employed by, the ancients. On the one side it is asserted that the Greek writers make no mention of harmony * (as we understand the term) in any of their works upon music, and that the construction of the old scales—the discordant nature of their “thirds,” for instance—effectually precluded the use of polyphonic music. On the other side, the existence of the stringed instruments, such as the lyre, the harp, and the lute; the structure of the double pipes blown by a single mouthpiece; have been adduced as strong evidence in favour of some sort of harmony, however crude it might sound to modern ears.

5. The most noted among Greek theorists were **Pythagoras** (*circ.* B.C. 600) and **Lasos**; amongst practical musicians were **Terpander** of Lesbos (B.C. 670), who invented or introduced the seven-stringed kithara; **Olympos** the Phrygian, who brought into Greece the art of flute-playing, which thenceforward formed an important element in Greek instrumental art; and **Tyrtæus**, a soldier, musician, and poet,—who in fact was a “troubadour,” or minstrel.

6. Although it is tolerably conclusive that instrumental music, pure and simple, was a favourite recreation of the Egyptians, the Greeks for many ages employed their instruments only as an accompaniment to the voice, whether for monologue or chorus. It is

* The term *ἁρμονία* (*harmonia*), as employed by Greek writers, is applied only to their octave system, or conjunction of two successive tetrachords (*v. par.* 10).

characteristic of the race that the later development of flute-playing as a separate art was accompanied by the institution of competitive trials of skill, by which the real vocation of the musician was lost amid the petty technicalities of mere mechanical display. And upon this began the decline of Grecian music, which indeed practically died out with the fall of the Grecian empire.

✓7. The Romans had no distinctive music of their own. They were pre-eminently a martial race, and probably the music they most appreciated was the trumpet-call. In their earlier days they were too busy, and in later times too lazy, to cultivate the art among themselves. In the era of luxury and dilettanteism which preceded their decay, they employed Greek slaves as singers and players. In the reign of Nero, who affected a devotion to music, the pursuit of the art became fashionable for a time, but the Romans were not in earnest, and consequently left behind them no marks of musical culture.

8. It is not until the fourth century after Christ that the actual history of music as a separate art begins. About the year A.D. 330, Pope **Sylvester**, we are informed, instituted a singing school in Rome, but there is no statement upon which we may form an accurate idea of the kind of music practised. By the light, however, of subsequent events we know that the singing must have been unisonal, and that the melodies were built upon the old Greek scales or modes, or possibly were ancient Hebrew airs, though some good authorities consider this doubtful. We also infer that **St. Sylvester** was acquainted with the method of antiphonal chanting, as Pliny, who lived in the second century, incidentally mentions this as the custom amongst the Christians of his day.

9. A few years later (374—397) **St. Ambrose**, Archbishop of Milan (not the Ambrose to whom is attributed the authorship of the *Te Deum*), took an especial interest in the culture of Church music, and arranged

the four diatonic scales known as "The Authentic Modes." He decreed that upon one or other of these scales all Church melodies should be constructed, and during his time many new hymns or chants were composed, some of them by himself. St. Ambrose also greatly improved the style of antiphonal singing, and organized a fine choir in his own church at Milan.

10. St. Ambrose had no immediate successor to continue the excellent work he had begun. By degrees the music of the Church deteriorated; and it was not until two centuries had elapsed that a reform was effected. Gregory the Great (590—604) during his pontificate devoted himself to the work of reformation and improvement, and restored to Church song that solemnity of character which it had gradually lost. He also added to the Ambrosian scales four others, which he called "the *plagal* modes." Both the authentic and plagal modes have for their foundation the old Greek system of "tetrachords." We annex a complete table of the eight scales:—

TONE	AUTHENTIC.	TONE	PLAGAL.
1. Dorian.	DEFGABCD	2. Hypo-Dorian (or <i>Æolian</i>).	AB CDEFGA.
3. Phrygian.	EFGAB CDE	4. Hypo-Phrygian.	BCDEFGAB
5. Lydian.	FGAB CDEF	6. Hypo-Lydian (or <i>Ionian</i>).	CDEFGAB C
7. Mixo- Lydian.	GAB CDEFG	8. Hypo-mixo- Lydian.	DEFGAB C D

On comparison it will be seen that the plagal modes commence at a fourth below the authentic. The above are known as the eight "Gregorian modes."

11. St. Gregory established a music school at which these modes and the order of the Church Service were systematically taught. The liturgy was noted entirely, it is said, by himself, and the whole was entitled the "Antiphonar," the chant or plain-song (*cantus-planus* or *cantus-firmus*) being sung alternately or antiphonally

between priest and choir. A very crude description of notation was used, consisting of dots and scratches of various shapes, and the "stave" was then unknown.

12. The system founded by Gregory the Great quickly spread throughout the Christian countries. Trained teachers and singers were sent from Rome to France and Germany (604—752), and schools of Church music were established in most of the principal dioceses in those countries. It is, however, affirmed that the improvement effected was but transient, owing to the barbarous and untutored condition of the people, who in those times were little more than savages.

13. The Emperor **Charlemagne** (768—814) proved himself a zealous apostle of the musical system of St. Gregory. He founded music schools at Metz and other towns, and placed them under Italian singers of note. In this work the emperor employed one **Alcuin**, a British ecclesiastic, as his principal assistant, and Charlemagne himself paid periodical visits of inspection to these schools, both in France and Germany. It was not until this period that "Gregorians" became the universal use throughout western Christendom.

14. There is documentary evidence that at this period musicians had a crude conception of harmony. Isidore of Seville, a contemporary of Gregory, alludes in his "Treatise on Music" to Symphony and Diaphony, concerning which Professor Ritter observes—"By the first word he meant probably a combination of consonant, and by the latter of dissonant, intervals." Some little time after the death of Charlemagne, **Hucbald** (840—930), a Fleming, accompanied his melodies by a *discantus*, or added part, consisting of a series (when combined with the melody) of consecutive fourths or fifths; a "diaphony" which would be simply horrible in our ears. *Organum* was another term for this weird accompaniment. The organ was now in use at some churches, and in Winchester Cathedral there was an

instrument having 400 pipes, a magnificent one for those days.

15. **Guido of Arezzo** (990—1050) effected many important improvements in the system of notation, or rather founded the system upon which our present method is based. The somewhat comprehensive term, *inventor musicae*, was applied to him by the musicians of his time. Hitherto two lines only had been employed as a staff; to these he added two others. Each of these additional lines had its distinctive colour—the one red, the other green or yellow. The yellow line indicated the place of the note C ; the red

line the place of the note F ; and from these our C and F clefs are respectively derived. Guido may also be regarded as the father of solmization, for he invented the terms *ut, re, mi, fa, sol, la*, which are used by students even now. (*Si* was not used till the 17th century, when Lemaire introduced it as a name for the seventh of the scale, or leading note.) The terms used by Guido were derived from the following Latin lines, which he taught his students to sing to a melody so arranged that each line began with the note it was employed to indicate:—

UT queant laxis,
REsonare fibris,
MIRA gestorum,

FAMuli tuorum,
SOLVE polluti
LABii reatum,
Sancte Johannes.

16. **Franco of Cologne** (c. 1200)* formulated a system of musical measure and time by means of varying the shape of a note to denote its comparative length. They were named and figured as follows:—*maxima*, 

* Forkel assigns to Franco a much earlier date than this, maintaining that he flourished during the latter half of the 11th century.

(or *duplex longa*); *longa*, ; *brevis*, ; and *semi-brevis*, . He likewise invented "rests" of the same relative values, and the signs he used are practically identical with those of the present day. He divided time into "triple," or perfect, and "duple," or imperfect. The bar , which gives a more perfect rhythm and accent to music, was not introduced till a much later date. In Franco's time, counterpoint of even five parts was employed in the accompaniment of melodies, but, although no longer restricted to progressions of fourths, fifths, and octaves, the harmony was of the most rigid kind, imperfect concords being at that period classed as discords.

17. **Adam de la Hale**, who also lived in the 13th century,* was a famous troubadour or wandering minstrel, and wrote songs in three-part harmony, the melodies of which would be accounted agreeable even in the present day. In character the songs of De la Hale are not unlike the popular "folk-songs" of Southern France and Northern Spain, as still sung by the rural population in those provinces. As in those early times Church music was exclusively in the hands of ecclesiastics, so these troubadours were the chief composers of secular music. As a rule they also wrote their own "words." Amongst the most notable troubadours were DE LA HALE, CHATELAIN DE COURCY, (King) THIBAUT of Navarre, and FAIDIT.

18. **Marchettus of Padua** (c. 13—), is credited with having "established the first correct principles in the use of consonances and dissonances;" while to **Jean de Meurs** (c. 1330), who was probably a contemporary of Marchettus, is ascribed the introduction of florid counterpoint. It is supposed by some, that notwithstanding the character of the name, Jean de Meurs (or de Muris) was an Englishman.

* Czerny fixes the date at about 1280.

19. (B.) We now come to the rise of the Belgian School. About this time (14th century) Belgian musicians began to devote themselves in a special degree to the elaboration of counterpoint (harmony as a distinct branch of study was not known till long afterwards), and so distinguished themselves in the art that they won the best appointments in France and Germany.

20. (B.) The first important name in the Belgian series is that of **Guillaume Dufay** (1380—1430), chapel-master (*maestro di cappella*) at Rome. He harmonized many existing melodies, both sacred and secular, in fairly good style, for four voices. He also wrote masses, in which appear some excellent specimens of canon. Dufay was followed by **Johannes Ockenheim** [or Ockeghem] (1430—1513), who has been called "the Sebastian Bach of the 15th century," and of whom some say that he founded the canonic or fugal style.* This latter assertion, as we have already seen, is scarcely true. As to canon we have positive evidence that Dufay was familiar with that form of writing, while in those days a "fugue" was scarcely more than a free style of canon. There is no doubt, however, that Ockenheim's work was more polished, and had more breadth and design; but he fell, with his contemporaries, into the error of exhibiting his contrapuntal skill at the expense of the feeling of the music.

21. (B.) But both as a scholar and as a composer, Ockenheim was outdone by his brilliant contemporary and pupil, **Jusquin des Prés** (1440—1521), of whom Luther was wont to say that he was "master of notes, while others were mastered by notes." Various amusing anecdotes are told of Des Prés, who is accused of making musical puns in his compositions "to gain his private ends." It is more to our present purpose to record his originality as a composer; for he was one of the first to discard the old *cantus firmus* and secular *motif*, and to

* '*Sumus in a common in*,' an English composition (c. 1250), is, however, an earlier instance of canonic writing.

invent his own musical subjects. Des Prés wrote several masses and motetts, in four and in five parts. He began his public career as a singer in the pope's chapel, but subsequently became chapel-master to Louis XII. of France. Des Prés numbered among his pupils ARCADELDT, MOUTON, WILLAERT, GOUDIMEL, CLEMENS non PAPA, and other excellent musicians.

22. (B.) **Adrian Willaert** (1490—1563) is frequently spoken of as "the founder of the Venetian School." As, however, Willaert was a Belgian both by birth and by training, it is confusing, if not altogether misleading, to disconnect him from the Belgian School. Indeed, we doubt if the existence of "the Venetian School" is sufficiently distinct and apart from the Belgian and Roman Schools to merit a separate page in the annals of musical history. It is better, therefore, to class the Venetian and Roman Schools (after the time of Willaert) under the common head of "Italian." Willaert received his training from Des Prés,—some say from Mouton also,—and after many wanderings finally settled at Venice, where eventually he obtained the post of chapel-master at St. Mark's. Willaert was a voluminous composer of songs and motetts, some of which he arranged for two, even three, separate choirs; and to him is ascribed the introduction of a new feature—the *madrigal*. He was succeeded at St. Mark's by **Cyprian de Rore**, a pupil and fellow-countryman, who became so popular with the Italians that they styled him "Il divino." De Rore excelled in the madrigal. Another contemporary of Willaert was **J. Mouton**, master of the chapel to Francis I. of France.

23. (B.) The most distinguished contemporary of Willaert was **Orlando Lassus**, or **LATTRE** (1520—1595), who attempted nearly every then-known form of composition, but devoted himself chiefly to Church music, such as psalms, hymns, litanies, magnificats, motetts, &c., &c. His settings of the Seven Penitential Psalms, for five voices, are amongst his best works.

Lassus introduced the *chromatic* element into musical composition, as well as such musical terms as *Allegro* and *Adagio*. He was greatly eulogized in his day, was spoken of as "the prince of music" (*musicæ princeps*), and received the order of the Golden Spur.

24. (B.) With Lassus, the famous Belgian School is brought to a close. To the Belgians we owe a considerable development of the great first principles of the art; but they carried their scholasticisms too far, and burdened their music with painful elaborations and curious conceits. The spirit was lost in the letter. For material on which to build their numerous contrapuntal devices they indiscriminately selected Gregorian plain-chants and secular melodies, even to love ditties and comic songs, which gave their titles to the masses and motetts that were built upon them; e. g. "The Noses Red," "Adieu, my loves," were well-known titles of sacred compositions. During this period the canonic or imitative form of counterpoint was developed; the madrigal, too, was introduced. It is said that BERNHARDT, a German, invented the organ pedal about the year 1490.* PETRUCCI, an Italian, was the inventor of movable music-types, 1502. For some time prior to this date music had been printed from large wooden blocks on which the characters were engraved.

25. (E.) We have now to speak of the Early English School, which, so far as we have any record, was inaugurated by Dunstable, who died in 1458. He has been called "the father of English contrapuntists," and was reputed as excellent a musician as his contemporary, Dufay. Another early writer was John Taverner (c. 1530), organist of Christ Church, Oxford. Christopher Tye (c. 1500—1560) in the year 1545 received the degree of Doctor in Music from the University of Cambridge. Tye was afterwards appointed organist of the Chapel Royal, and was the

* As organ pedals were in existence before this date, the truth probably is that Bernhardt introduced them about this time at Venice.

music-master of Queen Elizabeth, who prided herself on her playing of the Virginals,—a kind of primitive pianoforte, and the precursor of the latter instrument. Tye wrote a number of works, the best known amongst them in the present day being the anthem *I will exalt Thee, O Lord*.

26. (E.) The reign of Queen Elizabeth was prolific in musicians, as it was in authors, soldiers, and statesmen. **John Merbecke** (1523—1585), first a singer, afterwards organist, of the Chapel Royal at Windsor, suffered many trials during the reign of **Mary**, on account of his profession of the reformed faith. It is even said that he narrowly escaped martyrdom. Merbecke's principal work was the setting of the English Liturgy to a plain-song, which survives and is commonly used to this day. It was **THOMAS TALLIS** (1529—1585) who harmonized (and slightly altered) Merbecke's *cantus*. The skill of Tallis as a contrapuntist was unsurpassed by any of his contemporaries at home or abroad. He wrote a motett in no less than forty parts: of the art of canon he was a consummate master. His well-known "Evening Hymn," in which occurs an infinite canon at the octave between the treble and the tenor, is an extract from a larger work. A notable pupil of Tallis was **William Byrde** (1543—1623), composer of the famous canon *Non Nobis Domine*, and one of the chief contributors to Queen Elizabeth's "Virginal Book"—a celebrated collection of studies for the Queen's favourite musical instrument. Other Church composers of this period were: **Richard Farrant** (d. 1580—1), whose reputed anthem, *Lord, for Thy tender mercies' sake*,* is still a familiar composition; **Robert White** (d. 1580); and **Dr. John Bull** (d. 1622), the first professor of music at Gresham College. It will be noticed that two

* Recently proved to be by Hilton. A service in G minor, however, still remains the undisputed work of Farrant.

great composers of this period died within the same year (1585), namely, Merbecke and Tallis.

27. (E.) During the latter half of the 16th century the "madrigal" became exceedingly popular in this, as in other countries, and a number of English composers devoted their especial efforts to this form of composition. The madrigal may be briefly described as a part-song, of a light and generally a pastoral character (iii. 22). The principal madrigalists of this time were, **Thomas Morley, Kirbye, Dowland, Weelkes, Wilbye, and Benet**. The renowned collection entitled "*The Triumphs of Oriana*," to which, with Morley at their head, a number of composers contributed, was published in 1601. The book was dedicated to Queen Elizabeth.

28. (I.) We turn now to the rise of the purely Italian School, which is generally admitted to have been inaugurated by the compositions of **Constanzo Festa** (d. 1545), who, although trained in the school of the Belgians, rose above the mere scholasticisms and narrowing traditions of his predecessors. Festa was a member of the Sistine choir at Rome, and wrote a number of Church compositions, of which a *Te Deum* has survived to this day. He also wrote madrigals.

29. (I.) But the chief glory of that period was **G. PALESTRINA** (1514—1594) who lived to effect a complete revolution in the style of musical composition for the Church. A pupil of **GOUDIMEL** (1510—1572), himself a musician of no ordinary attainments, Palestrina is said to have "grasped the essential doctrines of Goudimel's school without adopting its mannerism." In 1562 occurred an event which brought Palestrina into noble prominence, as the leader, if not the originator, of a more exalted tone in sacred music, because more religious and devotional. In that year (1562) the famous Council of Trent expressed its condemnation of the frivolities that had so long crept into compositions of the most solemn character—such as the wholesale introduction of secular airs associated in the popular

mind with amorous or humorous words—and demanded the restoration in their place of the old Gregorian plainchant. This sweeping edict was strongly resisted, however, by Pope Pius IV., who prevailed upon the Council to rest their decision upon a new work to be composed for that purpose by Palestrina. Palestrina undertook the commission, and in 1565 had completed three masses, which, on their being performed before a Commission of Cardinals, won for their composer the distinction of having rescued Church music from a threatened relapse into comparative barbarism. The best of these three works was dedicated to the memory of a former pope, who had been an early patron of Palestrina, and was called after his name (*Missa Papæ Marcelli*). During his long and brilliant career, Palestrina composed numberless works, including several masses—some of them in six parts,—a *Stabat Mater* for two choirs, Lamentations, *Improperia*, and many motetts. To Palestrina is attributed the transposition of the *cantus firmus* or principal melody of a composition, from the tenor part, where hitherto it had invariably been placed, to the soprano or highest voice. Palestrina was succeeded at Rome by FELICE ANERIO, who worthily continued the work of reformation which Palestrina had so well begun. We must not, however, omit to mention Nanini (d. 1607) a contemporary and collaborateur of Palestrina, and moreover a gifted and thoughtful writer. Nanini and Palestrina together instituted a school in Rome in which the *nuova musica*, as it was called, was carefully taught and faithfully continued.

30. (I.) Other notable contemporaries of Palestrina were: **Christoforo Morales** (b. 1510), a Spaniard, who in 1540 was admitted into the Sistine choir at Rome, and wrote many compositions for the Church. His motett for six voices, *Lamentabatur Jacobus*, is still performed in the Sistine Chapel. **Luca Marenzio** (1550—1594), called “the sweet swan,” composed a number of Church works, but especially distinguished

himself as a madrigalist. **Giuseppe Zarlino** (1519—1590), besides writing many elaborate Church compositions, published several works on Musical Theory. **Giovanni Gabrieli** (1540—1612), a nephew and pupil of A. GABRIELI (a great contrapuntist in his day), directed his chief attention to the improvement of compositions for combined choirs. He also made some crude attempts at orchestration; amongst his works may be mentioned *In Ecclesiis Benedicite Domine* for two choirs, with accompaniments for one violin, three cornets, and two trombones; also *Surrexit Christus*, for three voices, two violins, two cornets, and four trombones. **Tomaso Ludovico Vittoria** (1560—1608), a Spaniard, was another distinguished Church composer of this period. It will be seen that we have classed these Spanish musicians with the Italian School, as Spain never had, properly speaking, a distinctive school of her own.

31. (B.) The latest lights of the old Belgian School, which was now fast dying out, or rather was merging into the Italian School, were: **Jacques Arcadeldt** (1500—1570); **Jacques Clement** ("non Papa") (1500—1566); **Hubert Waelrant** (1517—1595), who made certain improvements in the art of solmization; **Claude Lejeune** (1540—1600); all prolific and scholarly writers. Some of Arcadeldt's compositions are in use at the present day, and are highly esteemed by Church musicians.

32. (I.) ORIGIN OF THE OPERA. About the year 1580, we find a society of *litterati* established in Florence with the object of instituting a revival of the ancient Greek art of musical and dramatic declamation. The *recitative* was thus introduced, in imitation of the intoned recitations of the old Greek tragedies. In 1594 was produced the first opera, entitled *Dafne*, the words by the poet Rinuccini, the music by Peri. In this work the *musica parlante*, or recitative, in a somewhat crude style, was first represented. The success of *Dafne*

called forth the opera *Euridice*, of which Peri and his friend Caccini were the joint composers. *Euridice* was produced on the occasion of the marriage of Mary de Medicis with Henri IV. of France, at Florence, in the year 1600. But it was reserved for Claudio Monteverde (1566—1650) to give a pronounced form to the opera, and to impart to the recitative a more decided character. Monteverde was strongly condemned by his contemporaries for the unprecedented licence of his harmonies, as well as for the freedom of his melody. It is said that Monteverde was the first to employ the chord of the dominant seventh without preparation. His principal operas were *Orfeo*, *Arianna*, *Il Ballo delle Ingrate*, and *Tancred and Clorinde*. The orchestras of this period were of the most primitive kind, consisting of one or two flutes, lutes, viols, and a harpsichord or spinet, the players generally being placed behind the scenes. The further progress of opera will be traced in subsequent pages of this work.

33. (I.) THE RISE OF ORATORIO. The development of the oratorio progressed side by side with that of the opera. For ages it had been the custom on important ecclesiastical occasions to perform "miracle-plays," or rude—we might say profane—dramas on sacred subjects. About the middle of the 16th century, St. Philip de Neri, a priest of Florence, devoted himself to the improvement of these performances, and introduced historical scenes or sacred allegories in the course of the services he held in his *oratory*. (Hence the term *oratorio*, which is the Italian for "oratory.") The first oratorio worthy the name was not produced till the year 1600, when *L'Anima e corpo*, by EMILIO DEL CAVALIERE, was performed at a church in Rome. The composer arranged his accompaniments for the following instruments: a double lyre, a harpsichord, a double guitar (or *theorbo*) and two flutes. What Monteverde did, however, for the opera, was effected for oratorio by Giacomo Carissimi (1580—1673), who made many

improvements in the existing form of the recitative, and invented the *Arioso*, from which sprang the more elaborated *Aria*. His best known works are *Jephtha* and *Jonah*; the latter oratorio was revived a few years ago by Mr. Henry Leslie, whose celebrated choir has given some excellent performances of the work.

34. (I.) The most noted Italian composers of this period were: **Ludovico Viadana** (1560—1625), who is said to have composed "the first Church concertos and solo songs for the Church." He was also the first to write harmony as distinguished from pure counterpoint, and accompanied his voices (generally on the organ) from a *basso continuo*, or figured bass. Whether he actually invented the "figured bass" is, however, a matter of some doubt: it is said to have been employed in the first instance by **CATALANO** (b. 1595), a Sicilian. Viadana's tenor solo *Bone Jesu*, had an accompaniment of two trombones—an odd combination, truly, as it would seem to our more sensitive ears. **Gregorio Allegri** (1580—1652) was another active writer for the Church: his best known composition is a *Miserere*, which is still performed at the "Sistine," and at other Roman Churches. In 1877 this composition was sung (for the first time, we believe, in an Anglican Church) at All Saints', Margaret Street, under the direction of Mr. W. Stevenson Hoyte, the organist. **Orazio Benevoli** (d. 1672) wrote several famous motetts, some of which are scored for as many as 24 voices with brass accompaniments. **Geronimo Frescobaldi** (1587—1654) wrote a number of fugues, madrigals, and Church compositions, and was regarded in his day as a very accomplished organist.

35. (G.) The German, as a distinctive school, sprang from, and grew up with, the great Protestant movement under **Luther** (1483—1546), which began about 1524. Luther introduced the *Chorale*, from which our modern hymn-tune is undoubtedly derived, and to Luther himself are attributed several fine compositions of this

order. In 1524 a collection of chorales by **J. Walther** (1490—1555), a friend of Luther, was published at Wittenberg, under the immediate supervision of Luther himself. Luther obtained compositions of the same kind from Goudimel and Clemens non Papa, already mentioned. **Johann Eccard** (b. circa 1545), **Ludwig Senfl** (1490—1560), **Lucas Lossius** (1508—1582), **Jacobus Gallus**, or **Händl** (1550—1591), amongst whose works is a motett in twenty-four parts, for four choirs. **Melchior Vulpus** (1560—1616), **Leo Hassler** (1564—1618), **M. Praetorius** (1571—1621), were all eminent musicians of this school and period. But especial mention must be made of **Heinrich Schütz** (1585—1672) who has been called the “Father of German Oratorio.” He wrote *The Passion* according to the four Evangelists, the *Story of the Resurrection of our Lord*, and *Seven Last Words*. Schütz also composed the first German opera, *Daphne* (set to a German translation of Rinuccini’s words), which was performed at Dresden, 1627.

36. (E.) Reverting to the English School, the next important name is that of **Orlando Gibbons** (1583—1625), who was born at Cambridge, and received his musical training at the Chapel Royal, of which he was appointed organist at the age of 21. Gibbons attained to a leading position amongst his contemporaries, was a great favourite with Charles I., and was admitted a Doctor of Music at the University of Oxford. Many of his Church compositions are in use at this day—notably the anthem *Hosanna to the Son of David*, and the well-known Church Service in F. **Henry Lawes** (1600—1662) was a prolific and highly-favoured writer—chiefly of secular compositions—and set to music several “masques” (the private theatricals of those times), the best known among which is *Milton’s Comus*. **William Child** (1608—1696) is another composer of this period whose music may even now be heard in our churches. **Matthew Lock** (1620—1677)

is chiefly remembered through the famous "Macbeth music," which, however, is more probably a work of Purcell's. But he wrote a number of works, sacred as well as secular. His opera *Psyche*, produced in 1673, was the first English opera, properly so called, and was also, as we believe, the first opera presented on an English stage. Another opera composer of this period was JOHN ECCLES (*b. circa 1620*), but his works have not survived him. John Blow (1648—1708) wrote some excellent anthems, of which *I was in the Spirit*, *I beheld*, and *lo*, are the best known. Michael Wise (*d. 1687*) has also given some lasting contributions to Church music.

37. (E.) HENRY PURCELL (1658—1695) has with justice been styled "the greatest English musical genius." A pupil of Dr. Blow, and chorister in the King's Chapel, Purcell had the inestimable advantage of a sound and early training. At the early age of 18 he was appointed organist of Westminster Abbey, and in 1677, a year later, he composed his first opera, *Dido and Æneas*. This work made at once a foremost place for him among the composers of his time, and in 1690 another opera, *The Tempest*, set to words by Dryden, added still further to Purcell's reputation as a dramatic composer. Amongst other operas by Purcell may be mentioned *King Arthur*, *Diocletian*, *Fairy Queen*, *Timon of Athens*, *Don Quixote*, and *The Libertine*. His music to the masque in the Tragedy of *Œdipus* must not be forgotten. The celebrated 12 sonatas for the violin, including the one called "The Golden Sonata," were composed in 1683. Almost the last work of Purcell was the *Te Deum* and *Jubilate* in D, with instrumental accompaniments, recently performed in St. Paul's Cathedral, at a festival of the College of Organists. Purcell was also an accomplished writer for the harpsichord, and indeed scarcely any then-known form of composition was left by him untried. He died at the early age of 37, and was honoured with a tomb in

Westminster Abbey. **Jer. Clark** (d. 1707), another pupil of Dr. Blow, and a contemporary of Purcell, wrote cathedral music which is still performed. The well-known anthem, *I will love Thee, O Lord*, is perhaps one of his best works. **Dr. Aldrich** (1647—1710), Dean of Christ Church, Oxford, did much to encourage musical art in his day, and was himself a prolific composer of Church Services and anthems. With his name we close the record of English musicians of the 17th century.

38. (E.) **William Croft** (1677—1727) has given the Church some noble anthems, exceedingly popular even now, amongst which may be mentioned *God is gone up*; *O Lord, Thou hast searched me out*,—for three voices;—*O Lord, rebuke me not*, in which there is a fugue in six parts; and *Put me not to rebuke*. In 1715 Croft was made a Doctor of Music at Oxford. **Maurice Greene** (1698—1755) wrote some English operas, now quite forgotten, and many Church compositions. **James Kent** (1700—1736) was a pupil and great admirer and imitator of Croft. His anthems *Hear my Prayer*, and *O Lord our Governor*, are among the most popular at the present day. **J. Weldon** (1708—1736), whose anthem *Hear my Crying* gives evidence of the writer's skill and originality as a harmonist, has left behind him work only sufficient to cause lasting regret at his untimely death. **William Boyce** (1710—1779) was eminent as an organist, and wrote many organ pieces that were much admired in his day, but he is now known chiefly by his numerous vocal compositions. He wrote one opera, *The Chaplet*, and one oratorio, *Solomon* (which by the way he terms a *serenata*). His best known anthems are, *By the waters of Babylon*, *The Lord is King*, and *O where shall Wisdom*. He took the degree of Mus.D. at Cambridge in 1749. **Thomas Arne** (1710—1778) wrote as many as 23 operas, three oratorios, and a great number of anthems and songs. **John Travers** (d. 1758) is

another Church writer of this period; his anthem *Ascribe unto the Lord*, for two voices, is a favourite composition in our cathedral choirs. He also wrote some canzonets, or short songs, for one and two voices. **James Nares** (1715—1783) is the author of some 26 anthems. His Service in F is frequently sung in our churches, and is likely to continue popular for many years, as it is at once simple and melodious. **Jonathan Battishill** (1738—1801) wrote several operas, and many anthems, the latter including the celebrated composition for seven voices, *Call to Remembrance*. **Samuel Arnold** (1739—1802) wrote 40 English operas and seven oratorios, besides many Church compositions. Perhaps his continuation of Boyce's Church Service in A is the best known of all his works.

39. (G.) There would seem to exist, in the German School, the want of a definite link between Schütz and Bach; but Professor Ritter mentions one **JOHN SEBASTIANI** (*circa* 1660), who appears to fill the gap. Sebastiani wrote a version of the *Passion* which was produced in 1672, the year in which Schütz died. This work contains, we are told, a number of chorales arranged in good counterpoint, interspersed with tenor recitatives, all accompanied by strings. From this description there is little doubt that Bach based the form of his own *Passion-music* upon that of Sebastiani. **Reinhard Keiser** (1673—1739), a native of Leipsic, besides composing more than 100 operas, wrote "*The Bleeding and Dying Jesus*," an oratorio which he produced at Hamburg in 1704. In this work, however, the usual recitations and chorales were omitted.

40. (G.) **JOHANN SEBASTIAN BACH** (1685—1750), born of a race of musicians, was the son of J. A. Bach, organist of Eisenach. At an early age, and close upon the death of his father, he began his musical training under the care of his elder brother, J. Christopher Bach, who also died when Sebastian was but fourteen, leaving him without friends or means.

Bach, having a fine treble voice, entered a choir in Lüneberg, where he remained—long after he had lost his voice—until his eighteenth year, when he managed to obtain a place amongst the violinists in the Court band of the Duke of Saxe-Weimar. Shortly afterwards he was appointed organist at Arnstadt, and during the five years he held this position gave much time to self-improvement both in composition and in playing. In 1708 Bach removed to Weimar as Court organist, and his reputation both as organist and harpsichord player now rapidly spread through the surrounding States. In 1723 he was appointed to the directorship of the Thomas-Schule at Leipsic, a post which he held until his death. In 1725, Bach had completed the first volume of his *Wohltemperirte Klavier* (well-tempered Clavier)—the well-known forty-eight preludes and fugues. This work was not completed till the year 1740. His greatest works, the *Passion* according to St. John, and that of St. Matthew, were produced in 1729. A third *Passion*-oratorio, St. Luke, has also been attributed to Bach, but the authorship is held to be somewhat apocryphal. The *Matthew-Passion* is undoubtedly Bach's finest work: the dramatic double choruses, the expressive solos with their occasional obligato accompaniments for instruments, the exquisitely harmonized chorales, proclaim alike his scholarship, his genius, and his unfeigned piety. The *Christmas Oratorio*, a smaller work, but containing many characteristic beauties, was produced in 1734. It is said that the *Christmas Oratorio* was originally intended for performance in six portions on six separate occasions during Christmastide. Bach's writings are numerous and varied in character. His mass in B minor (for although a zealous Protestant he wrote several masses), composed in 1733, has recently been performed in this country. His *suites des pièces* for the harpsichord will always form valuable studies for pianoforte-players. The *Suites Anglaises*, composed at the request of an

English amateur, rank among the best of Bach's efforts in this style of composition. The celebrated *Art of Fugue* (1749) was among the last of Bach's works, and was written shortly before his blindness. Two of Bach's sons, FRIEDEMANN BACH (1710—1784) and C. PHILIPP EMANUEL BACH (1713—1788), were well-esteemed musicians in their time. The latter in his *Instruction Book* for playing the clavichord (1753) introduced a new system of "fingering," which was soon generally adopted. (iii 37.).

41. (G.) **GEORGE FREDERICK HANDEL** (1685—1759) was originally intended for the legal profession, but evinced, at a very early age, a strong predilection for music, and practised upon the harpsichord for some time in secret. When he was about seven years old he accompanied his father on a visit to the Court of the Duke of Saxe-Weissenfels, and there accidentally found an opportunity of playing upon the organ in the ducal chapel. The duke was struck by the child's performance, and at length persuaded the father to devote his son to the art as a profession. Handel was at once placed under the care of Frederick Zachau, cathedral organist at Halle, Handel's native town. Four years afterwards he went to Berlin, where he first met his future rival, Bononcini. Very shortly, however, his father recalled him to Halle, having declined an offer to send the youth to Italy for the purpose of completing his studies. On the death of his father, Handel went to Hamburg as a violinist in the opera house. Here he composed and produced his first opera, *Almira*, 1705. This was rapidly followed by other successful operas—*Nero*, *Florinda*, and *Daphne*—all in the same year. In 1706 Handel went to Florence, and at once established his reputation there by the production of *Roderigo*. He removed thence to Venice, and the opera *Agrippina* made him very popular with the Venetians. At Rome, Handel's first oratorio, *The Resurrection*, was written and performed; and at Naples, the pastoral,

Acis Galatea e Polifemo, from which latter work his later cantata, *Acis and Galatea*, was in part derived. On his return to Germany, in 1710, Handel was appointed chapel-master to the Elector of Hanover. The same year he visited England; and in 1711 *Rinaldo* was produced at the Haymarket with extraordinary success. After a short absence in Hanover, Handel returned to England, and composed (1713) the well-known *Utrecht Te Deum* and *Jubilate*, which was sung in St. Paul's cathedral, the queen (Anne) being present. On the succession of the Elector of Hanover to the throne of England (1714) Handel had cause to be apprehensive of the consequences of his neglect of the chapel-mastership at Hanover, and, it is said, composed the *Water Music* with a view to appeasing the wrath of his sovereign. However, he regained the favour of George I., and retained it as long as that monarch lived. Handel's oratorio on the *Passion* was written in Hanover in the year 1717, but was first performed at Hamburg. In the same year he was appointed director of the music at the chapel of the Duke of Chandos, who resided at Cannons. The celebrated *Chandos Te Deums* and *Anthems* were composed here. In 1720, an attempt was made to revive Italian Opera in London, and an association of persons, under the title of the Royal Academy of Music (not to be confounded with the existing institution of that name), was formed to promote the scheme, with Handel as musical director and composer. The first opera was *Radamistus*, and its success was complete. Handel's first English oratorio, *Ether*, was composed in the same year, and produced at Cannons; and in 1721 the new *Acis and Galatea* was performed. About this time there was a serious division amongst the directors of the Haymarket opera, and Bononcini and Attilio were brought over from Germany in opposition to Handel. These circumstances ultimately led to the dissolution of the society, in 1728. For this opera, Handel wrote *Musio Scavola*,

Floridante, *Otho*, *Giulio Cesare*, *Flavius* (where occurs the *Doni pace*) *Rodelinda*, *Scipio*, *Alexander*, *Admetus*, and *Ptolemy*. In 1729, he organized a new opera company, and wrote *Lotharic*, *Parthenope*, *Porus*, *Ætius*, *Sosarme*, and *Orlando*; but the enterprise proved a failure. Upon this Handel had recourse to oratorio, and in 1732 revived *Esther*, the success of which led to the performance of *Acis and Galatea*. This was followed by *Deborah* (1733). In this year Handel visited Oxford, where he produced *Athaliah*, and in consequence of its success was offered the degree of Doctor in Music, which, however, he declined. For the next two or three years Handel again busied himself with opera, and was again unsuccessful: during this period *Semiramis*, *Arbaces*, *Ariadne*, *Pastor Fido*, *Dido*, *Berenice*, and *Xerxes* were produced, as well as *Alexander's Feast*, the only successful work of this series. For a time Handel now gave his attention to the renowned organ-concertos, which give abundant proof of his exceptional skill as an organist. In 1738 the oratorio *Saul* was written, and in 1739 it was produced and most favourably received, at the Haymarket. *Israel in Egypt* was commenced immediately after the completion of *Saul*, which it followed at the Haymarket; then came *The Ode on St. Cecilia's Day*. The 12 grand concertos for harpsichord and strings appeared the same year, while shortly afterwards (in 1740), *L'Allegro ed Il Penseroso* was produced; these failed at the first performance. Handel's great masterpiece, *The Messiah*, composed in 1741, and rejected in London, was performed at Dublin in 1742 and received with the greatest enthusiasm. *The Messiah* was followed by *Samson*, 1743; * *Belshazzar*, 1744; *Hercules*, 1744; *Joseph*, 1744; *Judas Maccabæus*, 1747; *Joshua*, 1747; *Solomon*, 1748; *Theodora*, 1749; *Susanna*, 1749; *Jephtha*, 1751. The *Dettingen Te Deum* dates

* In *Samson* the *Dead March* in *Saul* reappears.

1743. During the last seven or eight years of his life Handel was afflicted with total blindness. He died on Good Friday, 1759, and was buried in Westminster Abbey. Many of his smaller works have not been mentioned, but an exception must be made in the case of the *Suites*, in which *The Harmonious Blacksmith* is included.

42. (G.) Among the more conspicuous German contemporaries of Bach and Handel, Hasse and Graun deserve especial mention. **J. A. Hasse** (1699—1783), whom the Italians honoured as “the divine Saxon,” excelled both in oratorio and in opera. But (I.) the writings of Hasse were all more or less formed upon Italian models, and therefore should properly be classed as belonging to the Italian School. Schlüter tells us that “of Hasse, a grand and noble *Te Deum*, as well as a *Requiem* (according to Krause, superior even to Mozart’s), are still annually performed in the Catholic Court Church at Dresden. On the other hand, the light Italian style and opera air appear without disguise or reticence in his masses and oratorios.” **C. H. Graun** (1701—1759) is now chiefly remembered through his great “passion” work, *Der Tod Jesu* (The Death of Jesus), which has recently been revived in Germany, and also in this country. **J. A. Hiller** (1728—1804) composed a number of light operas or operettas, including the celebrated *Liederspiele*. **Georg Benda** (1722—1795) was another prolific writer of opera; *Ariadne auf Naxos* and *Medea* are his principal works. Mozart was greatly impressed with the beauty of *Medea*, which he heard during his visit to Mannheim in 1778. In the course of his observations on this melodrama, Mozart writes:—“It is not sung, but declaimed, and the music is like a recitative *obbligato*; sometimes there is talking amid the music, which has a splendid effect.” **J. G. Nau-
mann** (1741—1801) principally devoted himself to Church music: his *Das Vater Unser*, a setting of Klopstock’s paraphrase of the Lord’s Prayer, is his

chief composition. **F. H. Himmel** (1765—1814) was a popular composer of opera, his *Fanchon* being among the most successful of his works.

43. (I.) **Alessandro Scarlatti** (1659—1725) gave to the oratorio a more decided form than it had at the hands of Carissimi and his contemporaries. He introduced independent movements (*intermezzi*) for the orchestra, which he greatly improved, and divided the aria into three distinct portions. He wrote masses, oratorios, operas, and other compositions; and his celebrated fugue for two choirs *Tu es Petrus*, is still occasionally performed at St. Peter's in Rome. His son, **DOMENICO SCARLATTI**, was a popular harpsichord player and composer for that instrument. **F. Durante** (1684—1755) wrote exclusively for the Church, in which branch of the art he did good service, but his claim to a place in musical history rests chiefly upon his having been the master of several musicians of eminence, including **F. Feo**, who composed, *inter alia*, a grand mass for two choirs (**A. Stradella**, composer of several fine oratorios, among them *St. John the Baptist*, is also accounted one of Durante's pupils, though there is apparently some evidence to the contrary); **Duni**, **Terradellas**, **Jomelli** (1714—1774), and **Piccini**, hereafter mentioned. An important contemporary of Durante was **Leonardo Leo** (1694—1746), whose oratorio, *The Death of Abel*, is highly spoken of by historians. Other Italian or Neapolitan musicians of this period were **G. P. Pergolesi** (1710—1736), composer of a *Stabat Mater* and several operas; **G. Sacchini** (1735—1786); **Guglielmi**, **Galuppi**, **Lotti** (1660—1740), who adopted the then modern style in his operas; **A. Caldara** (1674—1763), one of the greatest masters of fugue; **Marcello** (1680—1739), author of the *Paraphrases on the 50 Psalms of David*.

44. (FRENCH OPERA.) Originally an offshoot of the early Italian Opera, which was introduced into France by Cardinal Mazarin, about the year 1645, the French

School of Opera boasts a numerous array of composers. The first genuine French work was *La Pastorale*, composed (in 1659) by **B. Cambert**. But the actual founder of the French school was **J. B. Lully** (1633—1687), who, though by birth an Italian, was brought up in the household of the French monarch (Louis XIV.) and was placed in the king's private band as a violinist. His *Tragédies lyriques* consisted mainly of recitatives and choruses; here he generally ignored the aria and the duet, both so highly characteristic of the Italian School. Lully is regarded as the originator of the overture, which he generally composed in two parts—the first an adagio, or slow movement, the second a sprightly minuet, or a fugue. Lully was succeeded by **J. P. Rameau** (1683—1764), the renowned mathematician and writer on musical theory, who greatly improved upon Lully's style, by introducing a greater variety in the melody and harmony of his vocal writings. His principal opera, *Castor and Pollux*, was a popular work with the French for many years, despite the strictures of Rousseau, who complained that Rameau's harmonies were far-fetched, and destructive of tune. An attempt was made recently—in Paris—to effect a revival of *Castor and Pollux*, but the writer is not aware whether it was successful. During the lifetime of Rameau (1752), a rival opera company, imported from Italy, caused no small stir amongst French musicians. This company, whom the French styled "*Les Bouffons*," introduced a species of comic operetta, or *opera-bouffe*, on the French stage: but in a short time *Les Bouffons* were compelled to leave the country, through the persistent opposition of the French or "National" party. But they had left behind them the taste for *opera-bouffe*, and several French composers produced, almost immediately upon the departure of the Italians, a number of comic operettas—amongst them, *Les Troqueurs*, by D'AUVERGNE (1713—1797). Among other contemporaries of Rameau, were DUM:

(1709—1775), PHILIDOR, and MONSIGNY (1729—1817), the composer of *Le Déserteur*, and *Rose et Colas*. These paved the way for GRETRY (1741—1813), in whose reign the French operetta reached its zenith. Despite the example of his great predecessor Rameau, Gretry had recourse to the developed *aria* form, which he frequently introduced in connection with the recitatives. Gretry's *Richard Cœur-de-Lion* and *Zémire et Azor* achieved for their writer an immense popularity in his own day, and they have both been performed in Paris in recent years. Among the most favoured contemporaries of Gretry were: D'ALAYRAC (1753—1809), composer of *Nina* and *Les deux Savoyards*—both lately revived; BERTON (1766—1844), composer of *Montano et Stephanie*, *Ponce de Léon*, *Le Délire*, *Aline*, and other works of a similar character; SIMON CATÉL (1773—1830), whose opera *Sémiramis* has been placed on the French boards very lately; and lastly, NICOLÒ ISOUARD (1777—1818), a native of Malta, composer of the much-admired *Cendrillon*. These names, with those of BOIELDIEU, GOSSEC, and MEHUL, the celebrated author of *Joseph*, bring us down almost to the present generation of French composers.

45. (I.) CH. W. GLUCK (1714—1787), a native of Bohemia, received his training at Prague and Vienna; and subsequently at Milan, where he studied Italian opera under Samartini. In 1741, his first opera *Artaxerxes* was produced at Milan, and its success encouraged him to write *Clytemnestra* and *Demetrio*, which were produced at the same theatre. In 1745, Gluck visited England, and his *Cuduta del Giganti* and *Artamene* were produced at the Haymarket, with, however, but doubtful success. After a few years' stay in this country, Gluck returned to Vienna, and thence went to Rome, where, in 1754, *La Clemenza di Tito* and *Antigone* were well received. He afterwards went to Florence, and the real importance of this visit consists in the valuable friendship which Gluck then formed

with the poet Calzabigi, whose schemes for the improvement of opera were cordially entered into by the composer. The result was the production in 1764* of *Orfeo*, at Vienna, on the occasion of the marriage of the Emperor Joseph II. In *Orfeo*, the drama is released from the old restraints and conceits with which Italian opera had too long been burdened, and the music was written with a view to heightening the dramatic effect of the work. The opera met with an unqualified success, and fully established Gluck in the front rank of composers. This work was followed, in 1767, by *Alceste*, which was a further development of the same art principles. This work, however, was not so well received as the composer had reason to expect, and in his disappointment he turned to Paris. (46.)

46. (F.) GLUCK arrived in Paris in 1773, and early in 1774 *Iphigénie en Aulide* was performed, and ultimately gained him his footing in the French capital. He subsequently adapted to the French stage his *Orfeo* and *Alceste*. The advent in Paris of a formidable rival, **Piccini** (1728—1800), who sought to establish in France the old and exploded form of Italian opera, created some sensation, and aroused considerable party feeling. This occurred in 1776. The musical world in Paris was split into two powerful parties, the "Gluckists" and the "Piccinists," and the controversy was carried on with a good deal of unnecessary acrimony. In 1777 Gluck produced *Armide* which, however, suffered a temporary eclipse by the production in the following year of Piccini's *Roland*. Gluck's *Iphigénie en Tauride*, however, in 1779, practically asserted his triumph, although the rivalry continued until his death in 1787.

47. (G.) **JOSEPH HAYDN** (1732—1809) was born

* Some writers give 1762 as the date of *Orfeo*, while *Alceste* has been assigned to the years 1766, 1767, and 1769 respectively.

of poor parents, in the village of Rohrau, on the Austrian frontier. His first step in a long musical career was in the capacity of a chorister in the Cathedral of St. Stephen, at Vienna, not many miles from his native place. Here he remained eight years, and during this period received lessons on the violin and harpsichord from the cathedral choir-master, Reuter. It is said that Haydn practised at least sixteen hours a day. His first lessons in composition were obtained, not from Reuter, but from Fux's *Gradus ad Parnassum*, which he studied without the help of a master. On quitting, when his voice had broken, the cathedral choir, Haydn suffered a good deal of privation, and scraped together a scanty living by means of harpsichord lessons. After some rebuffs, he obtained the position of personal attendant upon Nicolo Porpora, a popular singing-master of that day, who allowed Haydn the privilege of playing the accompaniments during the singing lessons, and eventually gave him a good deal of valuable instruction in singing and composition. While thus engaged, Haydn contrived to secure one or two poorly paid appointments, such as the choir-mastership of a church in Vienna, the organistship of a private chapel, and the position of tenor singer in the Cathedral of St. Stephen. About the year 1750, when he was 18 or 19, Haydn obtained his first introduction to the public through the instrumentality, it is said, of one Curtz, a comic actor, who commissioned him to compose an opera, *The Devil on Two Sticks*. This was represented at one of the Vienna theatres, and had a short-lived success. Haydn next devoted himself to the composition of instrumental trios and other chamber music, which at once made him popular, notwithstanding the opposition he met with from certain quarters on account of supposed musical heresies. His reputation as a youthful composer of promise brought him to the notice of Prince Esterhazy, an enthusiastic amateur, who, struck with the merit and originality of

a new symphony of Haydn's, retained the composer in his private service; subsequently (1760) giving him the appointment of chapel-master—a post which he continued to hold till the death of the prince, in 1790. During his tenure of office, Haydn composed a large number of symphonies, operas, masses, concertos, trios, quartets, and other vocal and instrumental works. In 1790 he was induced, on the earnest representations of Salomon, to visit London, where Salomon acted as director of the "Professional Concerts," the scheme of which was very similar to that of the present "Philharmonic Concerts." Under agreement, Haydn produced either a symphony or a smaller composition at each concert given by Salomon. The success of this professional campaign induced Haydn to revisit London (in 1794), where he remained until the May of the following year. During his two visits he composed the group known as the *London Symphonies*, twelve in number, which rank amongst the finest of his orchestral works. On his return to Vienna, he retired from professional and public life, but still busied himself in composition, and in 1798—at the age of 66—produced his great oratorio, *The Creation*. This work, the words for which, it is said, were originally written (by Lidley) for Handel, produced a profound impression at the first performance, which took place in the Schwartzberg Palace, Vienna. The fame of *The Creation* soon spread through Europe; in England it has long been second only to *The Messiah* in popular favour. Thomson's well-known poem furnished the subject for Haydn's next oratorio, *The Seasons*, which was completed in 1801. This was Haydn's last important work. A complete list of his compositions would fill two or three pages of this book; they have, however, been summarized as follows:—"Symphonies, 118; quartets, 83; concertos, 24; trios, 24; sonatas, 44; operas, 19; masses, 15; dances, about 400; pieces for the baryton (a species of *viol-da-gamba*), 163;" but this summary is by no means

exhaustive. In oratorio, besides *The Creation* and *The Seasons*, must be mentioned *The Return of Tobias*; and lastly, *The Seven Last Words*—a beautiful but little-known work, lately revived. (*The Seven Last Words* was performed in the church of St. Peter, Bayswater, on Good Friday, 1876, and again in 1877, under the direction of Mr. Edwin Lott, organist of the church.) Haydn is generally regarded as the founder of the modern symphony, and the sonata-form; but he himself has acknowledged his indebtedness in these respects to Philipp Emanuel Bach, "who first prepared the way for the brilliant epoch of instrumental music which began with Haydn." The latter may, nevertheless, be regarded as the father of modern orchestration.

48. (G.) **WOLFGANG AMADEUS MOZART** (1756—1791), the son of Leopold Mozart,—himself an excellent musician, and author of a treatise on the violin—was born at Salzburg, Germany. At a very early age Mozart gave surprising tokens of his musical genius, which the father fostered and encouraged in every possible way. At the age of four years he received his first lessons on the harpsichord, and two or three years afterwards on the violin. It is narrated that when he was only six years old he made his first crude attempt at musical composition—a concerto for the clavier—which was not devoid of distinct musical idea and expression. About this time his father took the boy and his sister Maria—the latter eleven years old—on a professional tour to Vienna, where they were received with much favour, and were invited to perform before the Emperor and Empress. The following year they visited Munich, Mayence, and other cities of Southern Germany, and thence proceeded to Paris and London. In London they performed before the King and Queen (George III. and Charlotte) at St. James's. Everywhere the little musicians—more, probably, by reason of their youth than for their actual performances—were petted and caressed. In 1765 they went to Holland, where

young Mozart wrote the six sonatas, for violin with piano-forte or harpsichord accompaniment, for the Princess of Orange. Early in 1767 Mozart went again to Vienna, where he spent two or three years in study and composition. Here, besides writing two or three small operas and a *Stabat Mater*, he produced his first mass, on a commission from the Emperor, in 1768. In 1770 he commenced a lengthy and eventful tour through Italy, receiving much praise and many honours and keepsakes, but very little pecuniary reward. His opera, *Mitridate*, was performed at Milan during this tour; but although it had a temporary success, this opera does not deserve a legitimate place in any catalogue of Mozart's compositions. His next opera, *La Finta Giardiniera*, produced at Munich in 1775, in many respects shows a sensible advance upon previous work, but contains no features worthy of special comment. His first really important opera is *Idomeneo*, which was produced at Munich in 1781. This work, although to a great extent built upon the old Italian model, especially with respect to the elaborated *aria*, abounds in characteristic beauties, both in the choruses and in the instrumental scoring. Owing to the weakness of the libretto, and its want of dramatic interest, it is ineligible for the modern opera-stage. Occasional excerpts, however, are still to be heard in the concert-room. *Die Entführung aus dem Serail*, produced the following year, exhibits a growing independence of style, and more varied resources in the illustration of the several contrasting characters. *Le Nozze di Figaro* (1786) is too well known to be commented upon here; we may, however, note that this is Mozart's finest work from the purely dramatic point of view; while *Don Giovanni* (1787) excels in the elucidation of individual character. Respecting the latter work, a German critic writes: "Mozart's *Don Giovanni* is, by its marvellous delineation of both the lights and shadows of life, its combined seriousness and playfulness, tragedy and comedy

a universal, unique, and deeply significant work ; one to which, in the sister art of drama, Goethe's *Faust* can alone be worthily compared." The succeeding opera, *Così fan tutte* (1790), though containing many incidental beauties, is marred by the childish and essentially inartistic character of the libretto. In 1791 appeared *La Clemenza di Tito*,—the libretto of which is identical with that previously employed by Gluck and others—which was performed at Prague for the coronation of the Emperor Leopold II. In this opera Mozart introduced (to the aria, *Non piu di fiori*) an *obbligato* for a new instrument, the Corno de bassetto, or basset-horn, a kind of low clarionet, now practically obsolete. Two of these "basset-horns" are also employed in the *Requiem*, of which we shall have to speak later on. In many of the details of *La Clemenza di Tito* Mozart had recourse to the assistance of his pupil, Süßmaier, who, it is said, wrote most of the recitatives for this opera. Within a few weeks of the production of *Tito*, the *Zauberflöte* (*Il Flauto Magico*) was completed, and performed at Vienna, and was repeated one hundred times during the same and the following year. This was his last opera. Mozart had also been active in the production of other works. He had written many masses, and several symphonies, of which the finest are the G minor, the E flat, and the *Jupiter* Symphony in C, besides numerous quartets, and other chamber music. He had also written a number of pianoforte concertos and sonatas (which latter are seldom performed in public). His last work was the *Requiem* (1791), the greater portion of which he composed on his death-bed. There has been much discussion among critics regarding the authenticity of three important numbers in this beautiful work. It is asserted by some that the pupil, Süßmaier, who had already given Mozart much assistance in the preparation of *La Clemenza di Tito* and other contemporaneous or later works, actually composed the greater part of

the *Requiem*. If this be the case, it is surprising how Süssmaier sustained the individuality of Mozart throughout the remainder of the work, and it is still more astonishing that, apart from his connection with Mozart, so accomplished a writer should have left behind him no other abiding memorial of his own powers. The numbers claimed by Süssmaier as having been entirely composed by himself are the three last—*Sanctus*, *Benedictus*, and *Agnus Dei*. Mozart's wonderful skill in orchestration has been exemplified to us not only in his own works. The originally thin scoring of *The Messiah* was expanded by him in 1789, and since then Mozart's "additional accompaniments" have invariably been adopted at the performances of this oratorio. Other works of Handel were similarly rescored by Mozart. As a contrapuntist, also, Mozart takes high rank. The fugal movement (finale) in the *Jupiter Symphony*, and that in the overture to *Zauberflöte*, are standard examples of the highest form of contrapuntal development.

49. (G.) The German contemporaries of Haydn and Mozart are very numerous; but we cannot do more than catalogue the principal amongst them, giving their names, as far as possible, in chronological order. **J. G. Albrechtsberger** (1736—1809) is chiefly known to us through the medium of his elaborate work on harmony, counterpoint, and composition; but he wrote as many as twenty-six masses, and numerous other smaller works, chiefly ecclesiastical. **Michael Haydn** (1737—1806), a younger brother of the great Haydn, was greatly esteemed by the latter for his sacred compositions, which included masses, motets, canticles, and other liturgical music. **C. D. Dittersdorf** (1739—1799) produced thirty-seven operas, over forty symphonies, and a number of other forgotten works. **J. André** (1741—1799) wrote German operas. **J. G. Naumann** (1741—1801), composer of oratorios, masses, operas, and symphonies, still survives in occasional ex-

tracts from his larger works. **J. P. Martini** (1741—1816) wrote masses, a *Requiem*, and several French operas. **J. P. Schulz** (1747—1800) and **Ch. Neefe** (1748—1798)—the latter a master of Beethoven—were both writers of opera. The Abbé **Stadler** (1748—1833) and **Vogler** (1749—1814) were composers principally of Church music: Vogler, however, wrote five operas, and, moreover, was the author of several treatises on the theory of music. **J. P. Reichardt** (1752—1817) wrote thirty operas and some oratorios. **J. Playel** (1757—1831) is a familiar name with the pianoforte student. Besides his sonatas and other pianoforte compositions, he wrote a number of larger instrumental works, including symphonies and quartets. **J. L. Dussek** (1761—1812) takes a still higher position in the classical pianoforte school. His sonatas, occasionally heard in the concert-rooms of the present day, abound in originality and artistic power. **D. Steibelt** (1764—1823) was another prolific composer for the pianoforte, and among his works are to be found many excellent studies. **C. F. Zelter** (1758—1832) wrote part-songs and other vocal compositions, and organized the *Liedertafel*, a choir of male voices, said to be the first society of the kind formed in Germany. **Andreas Romberg** (1767—1821) is best known in this country in connection with the popular *Lay of the Bell*, a favourite work with local choral societies. He wrote seven operas and several symphonies. Other German composers and teachers of the same period are: **SCHOBERT**, **J. H. KNECHT**, **D. G. TÜRK**, **PETER VON WINTER**, **J. PREINDL**, **J. WEIGL**, **B. A. WEBER**, **WENZEL MÜLLER**, and **B. ROMBERG**, brother of the Andreas Romberg mentioned above.

50. (I.) The leading Italian composers of the latter half of the 18th and the commencement of the 19th centuries were not so numerous as those of Germany. **L. Boccherini** (1740—1806) stands almost alone in the domain of purely orchestral music. **G. B.**

Viotti (1753—1824), the celebrated violinist, and founder of a new school of violin-playing, wrote a number of concertos, chiefly for his own instrument, and with an especial view to the display of his own marvellous powers of execution. The only notable composer of pianoforte music was **Muzio Clementi** (1752—1832), whose *Gradus ad Parnassum* and twelve *Sonatinas* are likely to remain familiar subjects of study for years to come. Clementi was a prince among teachers, and during his lengthy stay in England exercised a remarkable influence upon the art of pianoforte-playing in this country. His grave lies within the precincts of Westminster Abbey, and a small tablet marks the spot. **A. Salieri** (1750—1825), **N. Zingarelli** (1752—1837), **D. Cimarosa** (1754—1801), **S. Mayer** (1763—1845), and **F. Paer** (1771—1839), were all composers of oratorios, masses, or operas, but their works are now nearly forgotten, save by a few musical antiquaries.

51. (F.) **M. L. Cherubini** (1760—1842) was a native of Florence, but having at the age of 26 settled in Paris, where he took up his permanent abode, he is properly classed by some historians as belonging rather to France than to Italy. A pupil of **SARTI**, an able teacher of that time, Cherubini made rapid progress in the art, and at the age of 22 produced his first opera, *Il Quinto Fabio*. To the Paris public he introduced himself by *Demophon*, but this work failed to command a positive success. In 1791, however, he completely won the popular favour by the production of *Lodoiska*. Undoubtedly his best opera is *Les Deux Journées*, which he brought out in the year 1800; this work is not unknown to the stage of the present day. Other operas were *Medea*, *Eliza*, *Anacréon*, *Faniska*, *Les Abencérages*, and *Ali Baba*. But Cherubini's fame rests not so much on his work for the stage as that for the Church. His masses, notably the one in D minor, are grand and impressive compositions, and for their

scholarly treatment alone are worthy of especial study. The same may be said of the *Requiem* in C minor, written in 1810. In 1835, Cherubini wrote a *Requiem* for male voices only, for the commemorative service in honour of BOIELDIEU (1775—1834), one of his own pupils, himself a popular writer of opera. Cherubini's well-known treatise on Counterpoint, Canon, and Fugue establishes his position as a master in the art. The work was written in the French language, and has been translated into English by Mr. Cowden Clarke. As a composer, Cherubini was highly esteemed by Beethoven, who pronounced him "the most estimable of living musicians." An important contemporary of Cherubini was E. H. MEHUL (1763—1817), whose operas were at one time very popular. The principal of these were *Joseph*, *Euphrosyne*, *Stratonice*, and *L'Irato*. Excerpts from *Joseph* are still occasionally published in France and England, but the work is not now performed, except in Germany. A single overture (*Le Jeune Henri*) seems to be the only composition by Mehul which has really survived this once popular composer. Among other French contemporaries of Cherubini we may note J. F. LESUEUR (1764—1837), O. F. LANGLE (1741—1807), and PIERRE RODE (1774—1830).

52. (G.) **LUDWIG VAN BEETHOVEN**, the greatest among German composers, and the most universal musical genius the world has ever produced, was born at Bonn, 1770, and was the son of a tenor in the Electoral chapel. The father, a man given to intemperate habits, was, while he lived, a source of misery to his son, as well as to the whole family, who were kept in a state of poverty approaching to destitution. Ludwig, who showed early signs of musical talent, was regarded by his father as a possible source of enrichment, and on this account was forced to practise upon the pianoforte so many hours at a stretch that his studies became a positive slavery to him. He received his first lessons from Van den Eeden, the Court organist, but the suc-

ceeding organist, Neefe, gave him more methodical instruction. Such was the progress he made, that at the age of 12 he occasionally took Neefe's place at the chapel organ; and at the age of 13 (1783) was entrusted with the post of cembalist (pianist)—then an important position, in the orchestra attached to the Court Theatre. His great ambition, however, was to go to Vienna for the completion of his studies, and in 1785 he was enabled to carry out this project. Arrived in Vienna he sought out Mozart, who at first, it is said, received him somewhat coldly, but on hearing him play an improvisation on a given theme, was so astounded that he said to his friends, "Pay heed to this youth; he will one day astonish the world." The opinion of Mozart, then in the zenith of his popularity, did not, however, have an immediate effect on the fortunes of the young musician. Beethoven had already published (1783), when in his 13th year, some small compositions, including three sonatas, which were dedicated to the Elector of Cologne, his patron at Bonn. During this first sojourn in Vienna, which lasted about two years, he appears to have given himself up entirely to study. In 1787 he was recalled to Bonn, by the death of his mother, his affection for whom was heightened by the fact that she was as affectionate and watchful as his father was harsh and neglectful. He had now virtually to provide for the maintenance of his family, and was obliged to have recourse to teaching, an occupation which he always disliked. The only bright spot in his life at this period was the intimate and lasting friendship he formed with the Breuning family—Madame Breuning (a widow), her three sons, and a daughter. In their society Beethoven spent many happy hours of relaxation, and in their company made his acquaintance with the classic literature of the world, and especially of his own language. Here, too (at Bonn), he gained the friendship and assistance of the Count Waldstein, to whom he dedicated the well-known

sonata which is now identified with the Count's name. To the influence of Waldstein is attributed the appointment of Beethoven, about this time, as Court pianist. In 1792, having been granted a pension by the Elector, Beethoven was enabled to revisit Vienna, and so left Bonn, never to return. Again settled at Vienna, and this time under more favourable circumstances, Beethoven placed himself under the tuition of Haydn. But, unhappily, there was no real friendship between them. Men of temperaments more opposite in character it would be hard to conceive: Haydn was mild and equable, Beethoven was enthusiastic and eccentric. Beethoven thought he had reason to complain of the indifference and actual negligence of his master, but notwithstanding these misgivings, he continued to receive lessons from Haydn until 1784, when the latter left Vienna on a visit to London. Beethoven availed himself of this departure to attach himself to Albrechtsberger, then organist of the cathedral, under whom he remained about fifteen months, and with whom he got on little better than with Haydn. Nevertheless, there is ample evidence that he worked unceasingly all this time. (The result of his studies is supposed to be shown in the work entitled *Studien im Generalbass*, published under Beethoven's name, but it has been pretty clearly proved that only a small proportion of this book is Beethoven's sole and actual work.) It was in the year 1795 that Beethoven commenced his public career as a composer and performer. At the annual concert, for this year, in aid of the widows and orphans of musicians, Beethoven produced the piano-forte concerto in C major, himself being the pianist. This performance was a sudden revelation to the Viennese public, and from this time engagements crowded upon him. During the seven years that followed, he published the thirty-two sonatas, three concertos, two symphonies, nine trios, and numerous other smaller works. But in 1800 the greatest calamity that could befall a

musician overtook Beethoven—deafness. It is remarkable that nearly all, if not all, his nine symphonies were composed under this affliction. The following are their dates : *First Symphony*, in C major, 1800 ; Second, in D major, dedicated to his patron, Prince Lichnowsky, 1802 ; Third (the *Eroica*), 1803—4 ; Fourth, in B flat major, 1806 ; Fifth, in C minor, about 1808 ; Sixth (*Pastorale*), in F major, about 1808 ; Seventh, in A major, 1812 ; Eighth, in F major, 1812 ; Ninth (the great *Choral Symphony*), in D minor, 1822—3. The only opera Beethoven wrote was *Leonora*, produced in 1805, and condemned by the critics. He wrote new overtures, making four in all, to the work ; and under the new title of *Fidelio*, it was once more presented. This was in the year 1814. In Church music Beethoven was not prolific. His first Mass, in C major, composed in 1807 ; the *Missa Solemnis*, in D major, 1818—22 ; *The Mount of Olives*, a short oratorio (in which occurs the well-known *Hallelujah*), about 1800 ; appear to be his only sacred compositions. His works have been thus roughly summarized by Czerny :—One opera, two dramas with music, a melodrama, several single dramatic choruses and songs, one oratorio, two masses, nine symphonies, eleven overtures, one septet, seven pianoforte concertos, one violin concerto, two violin quintets, seventeen violin quartets, five violin trios, thirty-five solo sonatas for pianoforte, ten sonatas for pianoforte and violin, six sonatas for pianoforte and violoncello, seven trios for pianoforte, violin, and violoncello, a pianoforte quintet, a great many other pianoforte compositions, cantatas, songs with pianoforte accompaniments, &c. As a *virtuoso* on the pianoforte, Beethoven out-distanced all his rivals, including the celebrated Hummel, who was studying under Mozart at the period of Beethoven's first visit to Vienna. Beethoven owed much of his command of orchestral resources to his practical acquaintance with the stringed instruments, any of which he was able to play

and to this cause in a special degree the beauty and finish of his string trios, quartets, and quintets, are due. It has been asserted that Beethoven's horn parts are often weak; some saying that his want of familiarity with that instrument made him timid in its employment; others, that he was apt to give it impossible passages. To both these accusations the horn part in the *Septet* alone ought to be a sufficient answer, and the *Septet* was a comparatively early production (1800). Notwithstanding incessant hard work, and a career of almost uninterrupted artistic triumph, Beethoven's last years were haunted by a dread of approaching poverty, for which, however, there was no real cause. He died at Vienna (1827), and was publicly buried with great pomp.

53. (G.) J. N. Hummel (1778—1837) received his early lessons from Mozart, and even while a boy is said to have been a wonderful performer on the pianoforte. In after years he was considered a worthy rival of Beethoven in the art of extemporization. He principally devoted himself to the pianoforte, both as player and composer. Schlüter says of him: "After the three great masters, Hummel is the best pianoforte (not sonata) composer; and, as such, is the founder of a school which has cast into the shade Dussek, Steibelt, Pleyel, Wölfl, and others." In Church music his masses take high rank even now, and the one in B flat is frequently performed. Hummel also very successfully adapted the symphonies of Haydn and Mozart, and some of Beethoven's also, for pianoforte, flute, violin, and violoncello. A *Septet*, written for pianoforte, string and wind instruments, is Hummel's *chef d'œuvre*. His operas—and he wrote several—are now forgotten. S. NEUKOMM (1778—1858), who wrote in all departments of composition; A. REICHA (1770—1836) author of the well-known work on fugue; A. DIABELLI (1781—1858); C. KREUTZER (1782—1849), who composed twenty-four operas and a number of masses, were among the most esteemed German musicians of this time.

54. (G.) Ludwig Spohr (1784—1859), a native of Brunswick, developed at a very early age that remarkable talent for the violin which placed him amongst the most brilliant violinists of his time. At the age of 14 he obtained the patronage of the Duke of Brunswick, who placed him in his orchestra, and subsequently employed Franz Eck, an excellent player, to give him lessons. Of his long and successful career as a performer we shall not now speak: the D minor and E minor concertos, both composed at an early period, bear sufficient testimony to his executive powers, as well as to his skill as a composer of violin music. As a writer, with the exception of a few lessons received in his youth, it is said that Spohr was entirely self-taught. This accounts for much of the freedom, some would say lawlessness, which characterizes all Spohr's work. His first opera, *Alruna*, had a considerable local success, but it is now entirely forgotten. However, the reception accorded to this work encouraged Spohr to further efforts in opera, and in 1816 *Faust* was produced at Prague. Spohr's *Faust*, since eclipsed by Gounod's immortal work, contains many fine points, and should not have been allowed to fall into unmerited neglect. Seven years later *Jessonda* was produced at the Court Theatre of Cassel, to which Spohr had been appointed as director. These are his two great operas; *Zemire und Azor* had but a fleeting popularity, and other operas were even more short-lived. Of his oratorios, *The Last Judgment* is the best known in this country; *Calvary* (1835) deserves a more frequent hearing. In 1820 Spohr came over to England to conduct one of the Philharmonic Concerts, and under his own bâton was produced, for the first time and in manuscript, the *Symphony in D minor*. The symphony entitled *Die Weihe der Töne* (The Consecration of Sound), an ever-present feature in our orchestral programmes, was produced in 1832. *The Fall of Babylon* was composed for and produced at the Norwich Musical Festival of

1842; in 1843 Spohr himself conducted a performance of the work at Exeter Hall, by the Sacred Harmonic Society. Besides the works already mentioned, Spohr composed eight symphonies, including the *Historical* and the *Seasons*, a double quartet for strings, and a number of works in which the violin figures as the principal instrument. As an example of his skill in part writing may be mentioned his Mass for ten voices, composed for the Leipsic Choral Society, but relinquished by that body as impracticable. Spohr, however, successfully produced it at Cassel, in 1827. Spohr's choral music, although highly esteemed amongst us, is yet so difficult by reason of the "chromatic" progressions in which he freely indulges, that few vocal societies find the courage to attempt it in public. His instrumental works are in constant use and request, while his two great violin concertos are frequently selected by modern *virtuosi* as admirable vehicles for the display of their skill on the most difficult of all instruments.

55. (G.) **Karl Maria von Weber** (1786—1826), the son of a travelling actor—once a man of wealth and good social position—had the good fortune to be placed under the tuition of Michael Haydn (par. 49). Of his juvenile productions—including two comic operas—it is needless to speak: Weber's actual career as a composer did not commence until he had visited Vienna (in 1803), where he studied for some months under the Abbé Vogler (par. 49). The following year Weber was appointed to the directorship of the opera-house at Breslau. Here he had a narrow escape of being accidentally poisoned. A succession of worldly reverses subsequently induced him to accept the post of private secretary to Prince Ludwig of Wurtemberg. In the year 1811 he obtained the countenance of the Grand Duke of Wurtemberg to a new opera, *Abu Hassan*, the success of which enabled Weber to make a professional tour amongst the principal cities of Germany. In 1813

he obtained the appointment—a comparatively important one—of musical director of the theatre at Prague; for which he composed several new works. Thence he removed to Dresden (1816) in the capacity of Kapellmeister to the King of Saxony. We cannot stay to enumerate the many compositions (among them the *Jubilee Cantata* and the Mass in E flat) which emanated from Weber's pen at this period. A new, and the most brilliant, era of his life was commenced with the opera *Der Freischütz*, originally intended for the Berlin Theatre. The same year, 1820, he completed *Preciosa*, and this work was produced before its predecessor. The success of *Preciosa*, marked as it was, was as nothing compared with that of *Der Freischütz*, the fame of which quickly spread to this country, and occasioned an invitation of the composer to London, as well as the commission to write *Oberon* for the English stage. In 1823 *Euryanthe* was produced, at Vienna, but the success of the opera was very transient, and gave Weber considerable disappointment. Acting on the advice of Beethoven, Weber subsequently curtailed the work, and thus obtained for it a wider hearing. Weber paid his promised visit to London in the year 1826, bringing with him his opera *Oberon*, which was produced at Covent Garden under his own bâton. An internal disorder of long standing, aggravated no doubt by hard work and continuous anxiety, prematurely terminated his life. He died suddenly, at the close of his engagement at Covent Garden, and was buried in London. Some years afterwards his remains were removed to Germany, and were re-interred at Dresden. The great work of Weber's life was the development of a distinct school of German opera. His *Der Freischütz* and *Euryanthe* must always be regarded—the period of their production duly considered—as among the most important contributions to the rising school. Schlüter regards Wagner's *Lohengrin* as the offspring of *Euryanthe* by "direct descent." *Euryanthe*, however, has

long been shelved, owing, no doubt, to the weakness of its libretto; but *Der Freischütz* enjoys an undiminished popularity. It is affirmed by some that it was Weber who originated the plan of including in the opera overture the leading airs from the body of the work. It is, however, to be noticed that the same feature exists in the overture to *Don Giovanni* (1787), a work which dates many years before Weber's operas.

56. (G.) **Franz Schubert** (1797—1828) began his career as a chorister in the Imperial Chapel at Vienna, where he remained until his 16th year. Of his juvenile efforts at this period we shall not speak; we should, however, make an exception of the celebrated song *Hagar's Lament*, which shows how early his wonderful powers as a song-composer were developed. When the loss of his treble voice brought an end to his chorister's duties, he returned to his native town in the capacity of schoolmaster's assistant in his father's school. Here he composed a number of works, including the *Mass in F*, which, slight as it is in construction, is a charming composition; and well deserves the increased attention which has of late years been accorded to it in this country. The Masses in C and G were composed about 1815; the same year were produced an enormous number of songs, including *The Erl King*, highly prized by Goethe. At the age of 20 Schubert left his home to reside in Vienna, and subsequently entered the service of Count Esterhazy as music-master to his children, where he remained about two years. After this Schubert never held any definite appointment, but lived an erratic kind of life, although he was seldom out of Vienna. He once applied for a post in the Imperial Chapel, but failed. He formed but few permanent friendships, and did not succeed in winning the regard of Beethoven until the latter was on his death-bed. As a composer for the opera, Schubert was exceedingly active and uniformly unsuccessful. The

music to *Rosamunde*, originally produced at the "An der Wien" Theatre, in 1823, appears to be the best example of his efforts in this class of composition. A few years ago the music of *Rosamunde* was brought before a London audience at the Crystal Palace, Sydenham, but we do not know of any further attempt to keep it alive. Next to his marvellous songs, Schubert's pianoforte works are the most popular amongst his compositions. His sonatas are, as a rule, somewhat erratic in point of musical form, but they are all full of strong connected interest, and exhibit in a remarkable degree the inexhaustible fertility of Schubert's mind. The same may be said of the pianoforte *fantasies*. In the domain of chamber music, his most important composition is, perhaps, the octet for stringed and wind instruments, occasionally performed in this country. Of Schubert's nine symphonies undoubtedly the finest is the symphony in C, composed in 1828, the year of his death. The score of his unfinished symphony in B minor presents so many characteristic beauties that it is a matter for regret that he did not complete the work. Of his Church music, to the works already mentioned must be added the *Mass in E flat* (composed in 1828), which is frequently performed in this country. Schubert also wrote several cantatas—including *Miriam's Battle Song*—melodramas, marches, and other occasional compositions, but all these save the marches are now nearly forgotten.

57. (G.) The name of **Jacob Meyerbeer** (1794—1864) is indissolubly associated with French Opera, but he was a German not only by birth but by training, and was a fellow-disciple with Weber under the Abbé Vogler at Vienna, at which city Meyerbeer was known as a brilliant pianist. His early operas—*Jephtha's Daughter* and *The Two Caliphs*, produced in Germany, and *Romilda*, *Semiramide riconosciuta*, *Margherita d'Anjou*, and others, for the Italian stage,—were by no means so successful as his later works in Paris. *Robert*

le Diable, produced at the Paris Grand Opera in 1831, at once established the fame of its composer. *Robert* was followed by *Les Huguenots* (1836); *L'Etoile du Nord* (originally in German), 1854; *Le Prophète* (1849); *Le Pardon de Ploermel*—better known as *Dinorah* (1859); and *L'Africaine* (1864). The greater part of Meyerbeer's life was spent in Paris, and Rossini was the only composer who rivalled him in popularity. Among the lesser German contemporaries of Meyerbeer we should give the first mention to **J. Moscheles** (1794—1870), so celebrated for his pianoforte playing that Mendelssohn, who was in a position to command the best masters, availed himself of Moscheles' tuition. Moscheles held for some time the position of professor of the pianoforte at the Leipsic conservatorium. He composed, besides some symphonies, a number of concertos, sonatas, and variations for his especial instrument, and his works still occupy occasional places in our concert-programmes. **FERDINAND RIES** (1784—1838) was a pupil of Beethoven, and excelled as a pianist. He composed several pianoforte concertos and sonatas; also two operas, besides quartets and other chamber music. **F. KALKBRENNER** (1784—1849) was another accomplished pianoforte player, and has left behind him many studies which are highly prized by pianoforte teachers. With one or two notable exceptions the names of **F. E. FESCA** (1789—1826); **J. C. F. SCHNEIDER** (1786—1858); **P. J. LINDPAINTEUR** (1791—1856); **J. MAYSEDER** (1789—1863); **B. KLEIN** (1794—1832); **C. CZERNY** (1791—1857), whose pianoforte studies are familiar to the students of the present day; **M. HAUPTMANN** (1794—1868) well remembered as the teacher of many living musicians; **A. B. MARK** (1799—1866); **C. REISSIGER** (1789—1859) bring the catalogue of German composers down to our own day.

58. (G.) **FELIX MENDELSSOHN-BARTHOLODY** (1809—1847), born in Hamburg, was the son of a wealthy banker, who on discovering his child's precocious talent for

music spared no pains in fostering and developing it both by direct tuition of celebrated professors and by the refining influence of the highest musical society. Brought up in an atmosphere of musical culture from infancy, Mendelssohn had opportunities which seldom fall to the lot of a musical student, and availed himself of them to the fullest extent. On the removal of the family to Berlin, Mendelssohn received his pianoforte instruction from Berger, the principal pianist there, and for composition was placed under Zelter, a pupil of Sebastian Bach: this combined course began when Mendelssohn was but eight years old. Under Zelter he continued some years; but at this time his parents had no thought of his devoting himself entirely to music as a profession. This was not decided until the year 1825, when, on visiting and playing before Cherubini, in Paris, he obtained the enthusiastic approbation of that great master. The first composition of any importance was the *Symphony in C minor*, written in 1824, when Mendelssohn was but 15. In 1825, the opera, *The Wedding of Camacho*, was produced at Berlin, but while it had a hearty reception at the hands of the public, the Berlin press was hostile to the work. Two years afterwards (1827) came the overture to the *Midsummer Night's Dream*; and, in the following year, the descriptive overture *A Calm Sea and Prosperous Voyage*. To about the same period is attributed the *Reformation Symphony*, introduced into England a few years back by Mr. Manns at the Crystal Palace. The year 1829 was marked by Mendelssohn's first visit to England,* he having just completed his studies at the University of Berlin. He appeared at several London concerts, and was warmly received on all sides. A short trip to Scotland occasioned the overture entitled *Kingal's Cave, or The Hebrides*, produced on his return

* Professor Ritter (*History of Music*, p. 394) gives 1827 as the date of this visit. The invitation (from Moscheles) came in that year, but the journey was deferred until 1829.

to Berlin, in the same year. In 1830 Mendelssohn proceeded on a tour through Italy and Switzerland, and while at Rome composed the music to *The First Walpurgis Night* of Goethe. In 1833, after having failed to obtain the principal professorship at the Berlin *Sing-Academie*, he was appointed "Municipal Music Director" at Düsseldorf, where he commenced the oratorio, *St. Paul*. From Düsseldorf he was summoned to the directorship of the Gewandhaus concerts at Leipsic, and while there completed his *St. Paul*, the first performance of which took place at the Düsseldorf festival of 1836. In the autumn of the following year *St. Paul* was produced at the Birmingham festival, under the composer's direction. The public celebration, at Leipsic, in 1840, of the fourth centenary of the invention of the art of printing, occasioned the production of the *Festgesang* and the *sinfonia cantata, Lobgesang, (Hymn of Praise)*. The former cantata was sung in the public square at Leipsic, on the unveiling of the statue of Gutenberg; the Hymn of Praise was performed in St. Thomas's Church. (The recent Carlton Commemoration Festival, 1877, was similarly marked by a performance of this work in Westminster Abbey, under the direction of Dr. Bridge, the organist.) In 1841 Mendelssohn accepted the appointment of Kapellmeister to the King of Prussia, for whom he composed, as his inaugural work, the music to the *Antigone*. The year 1843 witnessed the accomplishment of a long-cherished project of Mendelssohn's—the Leipsic Conservatorium of Music—of which he was the founder and first director. Among the original professors were Schumann and Hauptmann. Mendelssohn's last great work was the *Elijah*, which was expressly composed for, and produced at, the Birmingham Festival of 1846. An opera, *Lorelei*, and an oratorio, *Christus*, were both left unfinished. His death, in 1847, took place at Leipsic, and his remains were conveyed for interment to Berlin. It is needless to give a

full list of his works, which are well known in this country. The disciples of a new school have protested against the general idolization of Mendelssohn which would place him on a par with Handel and Beethoven; but, in spite of all that can be adduced against him, Mendelssohn continues to maintain a high position in the popular esteem. Rarely, if ever, is any scheme of "Classical Concerts," whether of orchestral or of chamber-music, marked by an utter exclusion of works from the comprehensive repertory which Mendelssohn has left behind him. All his compositions—from his symphonies to the charming *Lieder ohne worte*—from the *Elijah* to the *Anthems for two Choirs*—breathe a life and freshness, a sublimity and devoutness, which more than compensate for an occasional absence of detailed and formal construction.

59. (G.) **Robert Schumann** (1810—1856), a native of Zwickau, Saxony, was educated at Leipsic for the legal profession, but eventually abandoned his studies in favour of music. Under the care of WIECK his remarkable powers as a pianist were rapidly developed, while his theory studies were directed by Heinrich Dorn. In the year 1834 Schumann brought out the *Neue Zeitschrift für Musik*, a journal which still exists, and in it he published a number of essays and sketches on musical subjects—all full of literary power and keen critical perception. So far, Schumann had confined himself principally to compositions for the pianoforte, among which we should mention the *Sonata in F sharp minor*, that in G minor, and the *Fantasias*; and it was not until 1841 that he attempted his first symphony, in B flat. In 1843, the Cantata, *Paradise and the Peri*, a setting of the story from Moore's *Lalla Rookh*, was produced at Leipsic, but did not create any very decided impression. An opera, *Geneviève*, produced in 1848, also proved unsuccessful. The same year the music to *Manfred*, excerpts from which are occasionally performed in this country, was written. Schumann's finest work

of this class, however, is his music to *Faust*, a work full of beauty and power, which deserves to be better known and more widely appreciated. This was produced in 1850. In the same year Schumann was appointed to the Directorship of Music at Düsseldorf, but his confirmed ill-health, and the increasing symptoms of mental disorder, prevented him from undertaking much active duty, although as a writer he was still very prolific, producing his *Symphony in E flat* (1851), and several fine works, including *The Minstrel's Curse*, *Hermann and Dorothea*, and *The Pilgrimage of the Rose*. But, in 1854, insanity took complete possession of him, and after an ineffectual attempt to drown himself in the Rhine, he was conveyed to a private asylum in the neighbourhood of Bonn, where, in 1856, he died. The claims of Schumann as a composer were almost unknown in this country until his widow, the gifted pianist Clara Schumann, by her wonderful playing of his works for the pianoforte, brought to light her husband's exalted genius, which was too far in advance of his own time to obtain the immediate recognition which his illustrious contemporary, Mendelssohn, received.

60. **Frederic Chopin** (1810—1849), a native of Warsaw, spent by far the greater portion of his artistic life in Paris, and his works are strongly tinged with the style of the French School. His dance-music, especially his *Polonaises*, based on the form of an old national dance in Poland, is remarkable for the underlying melancholy which in fact more or less characterizes all Chopin's works. His *Mazourkas*, *Studies*, *Nocturnes*, *Waltzes*, *Galops*, and *Impromptus*, as well as the *Polonaises*, are all familiar compositions in the drawing-room, as well as in our concert-rooms. Chopin introduced several new features in pianoforte scoring. "It is to him," says Liszt in his well-known *Life of Chopin*, "that we owe the extension of chords, struck together in arpeggio, or *en batterie*; in the chromatic

sinuosities of which his pages offer such striking examples; the little groups of superadded notes falling like light drops of pearly dew upon the melodic figure." His sonatas, the first of which contains *The Funeral March*, and his concertos serve to exhibit every variety of sentiment and passion, in which, however, pathos strongly predominates. Chopin died of decline at an early age (39), and the March to which we have alluded was performed at his funeral.

61. (F.) The list of celebrated French composers of the period succeeding our last summary of this school is a brief one. **Daniel Auber** (1782*—1871) for many years director of the Paris Conservatoire, devoted himself principally to opera. His best known works are *Fra Diavolo*, *Le Domino Noir*, and *Masaniello* (*La Muette de Portici*). **L. HEROLD** (1791—1833) lives through his famous opera, *Zampa* (1830); other operas were *Marie* and *Le Pré aux Clercs*. **Hector Berlioz** (1803—1869), whose intimate acquaintance with every possible resource of the orchestra led him into the composition of works which require the employment of large and abnormally constituted bands to produce them, was originally a medical student, but afterwards went through the music course at the Conservatoire of Paris. He produced a large number of works, chiefly orchestral, of which his symphonies, *Episode de la vie d'un artiste*, *Harold en Italie*, *Romeo et Juliette*, and the *Fantastique*, are the principal. His opera *Benvenuto Cellini* is still, we believe, occasionally performed in France. **HALEVY** (1799—1862), besides his greatest opera, *La Juive*, so popular in Paris, wrote several operas, among them *L'Eclair*, and *Les Mousquetaires de la Reine*. **FÉLICIEN DAVID** (1810—1876), whose symphony-ode, *The Desert*, was revived, after long neglect, at Paris shortly after his death, brings us to the end of the list of completed careers.

* Schlüter and some others mention 1784 as the date of Auber's birth.

62. (I.) G. Spontini (1784—1851) effected considerable improvements on the style of Gluck, to whom also he, more nearly than any other composer, approaches in classic dignity. Like Gluck, Spontini, after a brief Italian career, settled in Paris (1803), and for the Paris Opera wrote his master-piece, *La Vestale*, as well as the operas, *Ferdinand*, *Cortez*, and *Olympie*. Professor Ritter, who, as we think, mistakenly fixes the date of Spontini's birth ten years earlier, thus writes of him: "Animated by a sense of heroic grandeur, full of pathos and passionate expression, he necessarily gave to his forms an adequate amplitude and vigour of style. But not this quality alone characterizes his works: tenderness of feeling, and sympathy for the softer chords of human passion, are also familiar to his pen. Amidst all the brilliancy of scenic representations, he seldom becomes trivial, or degenerates into mere superficial effect. His effects are always sustained by noble dramatic meaning. His orchestral accompaniments and illustrations are vigorous, sonorous, and brilliant, according to the requirements of the scenic situation." All this is amply proved on a mere glance at the score of his *Vestale*, which ought to find an English publisher, and a place in every musician's library.

63. (I.) Gioachino Rossini (1792—1868), a native of Pesaro, in Italy, early distinguished himself at the school of music at Bologna, where he studied composition under Johann Martini. While yet a boy, he wrote several operas for the provincial theatres, and at the age of 21 produced *Tancredi* at Venice. In 1816 Rossini went to Rome, and produced, at the Carnival of that year, the *Barbiere di Siviglia* and another opera. *Otello* was performed at Naples shortly afterwards, and at Rome *La Cenerentola*, while at Milan *La Gazza Ladra* found immediate favour. All these works were written in the same year—1816. *Mosè in Egitto* (in which the celebrated prayer, *To Thee, great Lord—Dal tuo stellato Soglio*—was inserted as an afterthought), was

produced in 1818, and *La Donna del Lago* in the year following. In 1823 took place the first performance of *Semiramide*, at Venice. After a short and successful visit to London, Rossini went to Paris, where he remained for the rest of his life. The only opera of note composed for the Parisians was the fine work *Guglielmo Tell*, which appeared in 1829. After this date no other compositions, except the *Stabat Mater* and the posthumous *Messe Solennelle*, appeared from his pen. The most prominent among Rossini's Italian contemporaries were: V. Bellini (1802—1835), whose *Norma*, *La Sonnambula*, and *I Puritani*, are his only lasting operas; G. Donizetti (1797—1848), the composer of *Lucrezia Borgia*, *Lucia di Lammermoor*, *La Favorita*, *Don Pasquale*, *L'Elisir d'Amore*, *La Fille du Regiment*, and other favourite operas; S. MERCADANTE (1797—1870), and M. CARAFÀ (1785—1872) both truthfully described as "weak imitators of Rossini."

64. (E.) Samuel Wesley (1766—1837) was a son of the Rev. Charles Wesley, the great hymn-writer. Samuel Wesley is said to have attempted composition even in childhood; at the age of six years he wrote an oratorio, *Ruth*—a mere childish production, as might have been expected, but still showing signs of unusual musical taste and ability. Wesley's anthems are among the finest of his time. They must not, however, be confounded with those of Samuel Sebastian Wesley (1810—1876), his son, whose *Blessed be the God and Father*, and *The Wilderness*, and other anthems and Church Music, stamp him as one of the greatest Church writers of the age. William Crotch (1775—1847) was another in whom genius was early discovered and developed. He has left behind him the oratorios, *The Captivity*, and *Palestine*, and a number of anthems, services, glees, and a work on Harmony. His grand motett, *Methinks I hear the full Celestial Choir*, is frequently performed, and may be cited as an exquisite specimen of vocal writing in five parts. Fo:

some years Dr. Crotch filled the Chair of Music at the University of Oxford. **Thomas Attwood** (1767—1838) was a pupil of Mozart, under whose careful training he acquired that sweetness of style and clearness of diction for which his writings are noted. He composed a number of anthems—of which *Come, Holy Ghost* is the most popular—and several operas, now unknown. **J. B. Cramer** (1771—1858) was a leading pianist and teacher, and composed upwards of 100 pianoforte sonatas, seven concertos, numerous studies, and the well-known instruction book. **John Field** (1782—1837), a pupil of Clementi, was another accomplished pianoforte player and composer, whose *nocturnes* are ever favourite compositions. **Sir H. R. Bishop** (1782—1855) was a prolific composer of almost every kind of music, but excelled in the part-song and glee. He wrote many popular operas in English, and from these many of his best-known songs and choruses are taken. **V. Wallace** (1814—1865) survives in his operas, *Maritana*, *Lurline*, &c. **M. W. Balfe** (1808—1870), an Irishman by birth, but an Italian by training, composed principally for the stage. His operas, *The Bohemian Girl*, and *The Talisman*, a posthumous work, are at the present moment the most prominent of Balfe's productions. **Sir William Sterndale Bennett** (1816—1875), one of the most gifted of English composers, was not a prolific writer, but everything he has left us is of the highest merit. His two cantatas, *The May-Queen* and *The Woman of Samaria*, are beautiful works of their kind. Of his orchestral works, the *Symphony in G minor*, the concert overtures, *The Wood Nymph*, *Paradise and the Peri*, and the pianoforte concertos, are among the best. **Cipriani Potter**, a former principal of the Royal Academy of Music, is still remembered as a skilful teacher and an accomplished writer.

65. (E.) The more prominent among the composers of our own day shall now be briefly noticed. **Sir John Goss** (b. 1810), sometime organist of St. Paul's Cathed-

dral, was in boyhood a chorister of the Chapel Royal, and afterwards became a pupil of Attwood, at St. Paul's. He has composed a large number of works, chiefly sacred. Among his anthems the best known are, *If we believe that Jesus died* (composed for the funeral of the Duke of Wellington), *Praise the Lord, O give thanks, O Saviour of the World, Stand up and bless the Lord your God*, and *O taste and see how gracious the Lord is*. His secular works include *Ossian's Hymn to the Sun, There is beauty on the Mountain, The Sycamore Shade*, &c. Sir John Goss was formerly a Professor in the Royal Academy of Music, and his work on *Harmony and Thorough-bass* is a well-known and widely popular text-book. Sir Julius Benedict (b. 1804), composer of *The Lily of Killarney* and other operas, and of the oratorio, *St. Peter*, is a native of Stuttgart, Germany, but has been resident in England for many years. Sir Michael Costa (b. 1810) composer of the popular oratorio, *Eli*, and of *Naaman*, has also written several operas, among which may be mentioned *Malvina* and *Don Carlos*. He is the conductor of Her Majesty's Opera, and of the Sacred Harmonic Society. G. A. Macfarren (b. 1813), Professor of Music in the University of Cambridge, and Principal of the Royal Academy of Music, has written an immense number of works, chiefly vocal, among them the two oratorios, *St. John the Baptist* and *The Resurrection*. Edward J. Hopkins (b. 1818), organist of the Temple Church, London, ranks with the best Church writers of the present day. His *Services* in F and A, his anthems and hymn-tunes, are deservedly esteemed, and will have a permanent place in the music-literature of the Church. The Rev. Sir F. A. Gore Ouseley, Bart. (b. 1825), Professor of Music in the University of Oxford, is the composer of the oratorios *St. Polycarp* and *Hagar*, and of several fine anthems, of which *It came even to pass* is perhaps one of the best. Sir Frederick Ouseley has written treatises on *Harmony*, on *Counterpoint*,

Canon, and *Fugue*, and on *Musical Form*. Other eminent English musicians are: **Sir R. P. Stewart**, Professor of Music in the University of Dublin, composer of Church music, cantatas, and instrumental works; **Dr. Steggall**, organist of Lincoln's Inn, whose anthems and services are justly esteemed as among the best of the day; **F. H. Cowen**, composer of the *Rose Maiden*, the *Corsair*, dramatic cantatas; also of *Pauline*, an opera, and *The Deluge*, an oratorio; **A. Sullivan**, composer of *The Prodigal Son*, *The Light of the World*, &c.; **Berthold Tours**, who has written some fine anthems and Church Services, besides numerous songs; **Joseph Barnby**, author of many popular anthems and services; **John Barnett**, whose *Mountain Sylph* is a favourite composition; **J. F. Barnett**, composer of *The Ancient Mariner*, &c.; **J. L. Hatton**, author of *Hezekiah*, (an oratorio), and several anthems, songs, and part-songs, &c., &c.

66. (F.) **CHARLES GOUNOD** (b. 1818) stands at the head of French composers at the present day. He has written some fine sacred works (*Messe Solennelle*, *Messe du Sacré Cœur*, &c.), but his fame will rest chiefly upon his operas, of which *Faust* is his *chef-d'œuvre*. Amongst other leading French composers are **Ambroise Thomas**, director of the Paris Conservatoire, author of *Mignon*, *Hamlet*, and other operas; **Flotow** (author of *Marta*); **Jacques Offenbach**, composer of many comic operas, including *La Grande Duchesse*, *Barbe Bleu*, &c.; and **HERVÉ**, another writer of *Opera Comique*, whose *Chilperic* has had a world-wide but ephemeral popularity. Among other living French musicians may be mentioned **MASSÉ**, **MASSENET**, **C. SAINT-SAËNS**, **LECOQC**, and **GUILMANT**.

67. (I.) **GIUSEPPE VERDI** (b. 1814) now stands almost without a contemporary of any importance among Italians. His operas are very numerous, the most popular among them being *Ernani*, *Rigoletto*, *Il Trouv*

tore, La Traviata, Un Ballo in Maschera, and Aida. His Requiem, notwithstanding a frequent disregard of many important canons of contrapuntal writing, is a grand and impressive work.

68. **Niels W. Gade** (b. 1817), a native of Copenhagen, one of the most distinguished of living composers, is chiefly known through his *Erlking's Daughter* and other cantatas, but he has also written some splendid symphonies and other orchestral works, as well as chamber-music and songs. **Anton Rubinstein**, a native of Russia, better known as a pianist of the first rank, has also written concertos and other orchestral pieces, of which latter his recent *Ocean Symphony* is the most remarkable.

69. (G.) **RICHARD WAGNER** (b. 1813), whose art-theories have for many years been the subject of a great deal of bitter controversy amongst musicians, has endeavoured to revolutionize the whole system of opera, and to overturn all previous notions of musical form. His earlier operas, *Rienzi*, and *Das Liebesverbot*, are framed upon the old models; but he forsook these in his *Fliegende Holländer* and *Tannhäuser*, and even these he considers as far beneath the ideal form of opera. *Lohengrin* may be regarded as a more decided advance upon *Tannhäuser*; but *Tristan and Isolde* and the *Meistersinger* are the first works which embody the full realization of Wagner's views. His greatest contribution to the "music of the future" is the well-known opera-series, *Der Ring der Nibelungen*. This fourfold work consists of *Das Rheingold*, *Die Walküre*, *Siegfried*, and *Götterdämmerung*, and the whole series was performed at a great public festival, in 1876, at Bayreuth, Germany, in a theatre especially constructed for that purpose. A selection from this tetralogy was performed in London, at the Royal Albert Hall, 1877, under the composer's personal direction. **Franz Liszt** (b. 1811), a native of Hungary, is one of the greatest

of living *virtuosi* on the pianoforte, for which he has written concertos, and numberless smaller studies and transcriptions, besides cantatas and symphonies. Liszt is a strong advocate of the Wagner theories, to which we shall refer more particularly in a later section of this work. Johannes Brahms (b. 1833), whose *Song of Destiny* and *Requiem* are becoming familiar works in this country, has also proved his remarkable genius in the symphony and other important forms of composition. J. Raff, J. JOACHIM (b. 1831), ERNST PAUER, are all distinguished composers, amongst many others, in their respective styles.

70. We have now come to the conclusion of our general summary, which from the nature of our subject can be little more than biographical. Our succeeding section will consist of a series of tables of musicians and events; after which we shall proceed to trace, with the help afforded by the present section, the history of the art itself.

SECTION II. — CHRONOMETRICAL TABLES OF MUSICIANS AND MUSICAL EVENTS.

EXPLANATION.

1. EACH page contains a "square," divided into *ten* parts. The squares on opposite pages are duplicates, *i.e.* they represent the same period of time; the *left* hand page indicating events, discoveries, &c., the *right* hand page containing the names of musicians. From the time of Alfred the Great (870) and onward, the reigns of the English Sovereigns are given in the respective intervals of their accession, in order the more clearly to localize the musical events in the mind of the student.

2. The *first* square (right and left) includes the dates A.D. to A.D. 999. Each succeeding square represents 100 years.

3. Table No. I. contains *ten* spaces of 100 years each; these again are subdivided into *ten* spaces of *ten* years each. Table No. II. (and each succeeding table) contains *ten* spaces of *ten* years each, each space of *ten* years being afterwards subdivided into *ten* spaces of *one* year each. These spaces are so arranged that each terminal number of a date has a fixed position in the squares: thus, the date "*xxxx0*" is always assigned to the "*band*" at the top of the square; the date "*xxxx5*" is always to be found in the centre square, and so on.

4. The sign * prefixed to a name or event denotes that the date is uncertain or approximate.

5. It will be well for the student to exercise himself in the identification of dates and squares, by the use of the figures, 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, before systematically employing the tables in conjunction with the text.

Example. To find the year 1555:—5 is invariably the *centre* figure. Turning to Table VII. (1500—99) we see that 1550 is the *centre* square of ten years, and 1555 the *centre* of that square. A few experiments of this kind will easily familiarize the student with the plan of these tables.

TABLE I.—A.D. TO 999.

MUSICAL EPOCHS AND EVENTS.

A.D. — to A.D. 99.		
100	200	300
		Pope Silverius's Music School in Rome, 830. St. Ambrose arranged Authentic Modes, 390.
400	500	600
	* Gregory added Plagal Modes, 590—600.	Pope Vitalianus introduces the organ into churches, 667—672.
700	800	900
* Charlemagne spreads Gregory's system through France and Germany, 768—814.	Appearance of troubadours in Provence. Church organs in use.	* Discantus (organum, or <i>Diaphony</i>) employed by Huchald.

TABLE I.—A.D. 70 999.

SECTION III.—ART SUMMARY.

1. For the reasons adduced at the commencement of the first section of this work, we shall not lead our readers into the labyrinths of Greek scales, or the fanciful dissertations of mediæval writers on musical theory, but will proceed at once with the actual history of music as an art (and science), which practically dates from the fourth century after Christ.

2. The plain-song of the early Christian Church was, as we have seen, formed upon the old Greek scales or modes, the use of which was carried into Italy by the Greek slaves who acted as minstrels to the rich *dilletanti* of Rome. The voice was generally accompanied with the lyre (*λύρα*), an instrument which had from seven to fifteen or sixteen strings. Whether the lyre supplied harmony or merely "doubled" the voice is, however, an open question. There is no record of this instrument being employed in the Church; and in all probability it was judged as of too secular a character to admit of its use in Divine worship. The modes or scales of Gregory the Great have already been tabulated (*v. sect. i. par. 10*); we shall now present our readers with a view of the eight chants or "tones" formed upon those modes. The following are quoted by Sir John Hawkins from a work by Gaffurius (1502). For the convenience of the student we have translated them into the modern notation:—

EX. 1. TABLE OF GREGORIAN TONES.

TONE I.

* "The first Tone thus commenceth, thus proceedeth (or mediates), and thus endeth."

These chants were ordered to be used in all the Christian churches of Europe, and to be used in their integrity. It must not be supposed, however, that strict uniformity in the manner of singing the tones

could be preserved throughout Christendom ; the Gallie singers took great liberties with the *Cantus firmus*, and were frequently rebuked for their many unpardonable licences. Besides the above, there were the more ancient "Ambrosian Chants," so called after St. Ambrose, who either composed them, or more probably directed their use in the Church. The following examples we take from Dr. Crotch's valuable work, "Specimens of Various Styles of Music":—

EX. 2. AMBROSIAN CHANTS. (Circa A.D. 384—397.)

3. The general method of singing the chants was alternate or antiphonal: either between priest or choir, or from "side to side," as the Psalms are now sung in our cathedrals. Cathedral choirs, and those of most churches, have for ages been divided into two portions facing each other, and respectively termed *Decani*, or the side of the Dean or other principal priest, and *Cantoris*, or the side of the Cantor, Precentor, or "chief singer." Hawkins mentions yet other modes of antiphonal singing:—"With respect to the music of the primitive church, though it consisted of psalms and hymns, yet was it performed in sundry different manners; that is to say, sometimes the psalms were sung by one person alone, the rest hearing with attention, sometimes they were sung by the whole assembly; sometimes alternately, the congregation being for that purpose divided into separate choirs; and, lastly, by one person, who repeated the first part of the verse, the rest joining in the close thereof. Of the four different methods of singing above enumerated, the second and third were very properly distinguished by the names of

symphony and antiphony, and the latter was sometimes called *responsaria*; and in this, it seems, women were allowed to join, notwithstanding the apostle's injunction on them to keep silence."

4. The ancient chants and hymn-melodies of the Church were all built, as we have seen, upon the Greek scales or modes—Dorian, Lydian, Phrygian, &c. The origin of the modern major scale, now common to the whole of the civilized world, has never, to our knowledge, been actually traced or satisfactorily accounted for. The native airs of Western Europe, where the modern scale took its rise, are built upon totally different tonalities—the Scotch and Irish, for instance; while in England itself, the primitive melodies sung by rustics, from Yorkshire to Somerset, denote a mode similar to, if not identical with, the Dorian.* In the absence of direct evidence to the contrary, we are inclined to the belief that our present scale was gradually evolved in obedience to the requirements of counterpoint. With most of the old modes the use of imperfect concords (thirds or sixths), especially if syncopated or suspended, would be less tolerable even than sequences of consecutive fourths or fifths. An experiment upon a complete scalar passage in most of the modes will exemplify this. The absence of the "leading-note"—the 7th of the scale a semitone distant from the octave—for a long time deprived musicians of the perfect cadence. For one or two centuries after the introduction of added parts to a melody, the subject was invariably taken from the Gregorian plain-song; but gradually it became the custom to raise or lower by a semitone various notes in order to avoid awkward intervals. In the Dorian mode, for example, the sixth

* Many readers will doubtless recognize the following fragment as a familiar "pastoral" strain:—

note, B \natural , was altered to B \flat , on account of the dissonance existing between the former note and F, the third degree of the scale. If, to create a "leading-note," we raise the seventh degree (C \natural) to C \sharp , we have at once the complete modern scale of D minor. That of D was the usual minor key with the early contrapuntists; next to it came the key of A minor, possibly founded upon the related plagal mode, the Hypodorian (*v. sec. i. par. 10*), which required only the raising of the seventh degree by a semitone to constitute it a perfect modern minor scale.

5. The first attempt (on record) to clothe the bare unisonal or octave-singing of the appointed plain chants of the Church, was that of the Fleming, Hucbald. His *diaphony*, or two-part accompaniment upon the rude pipe-organ which at that time was being introduced into the principal cathedrals of Europe, consisted of an unvarying succession of fourths, fifths, or octaves, which would give the *cantus firmus* a certain grimness and stiffness not wholly out of character with the native severity of the Gregorian tones. Some writers state that the *organum* was not played but sung, others that it was intended to be sung at a certain time-distance after the *cantus*, as a kind of canonic imitation. But if we look at the following specimen of the *organum* or diaphony by Guido (*circa 1022*) we shall at once see that the latter hypothesis is utterly untenable:—

EX. 3. ORGANUM OF DIAPHONY.

(a) *Cantus.*

(b)

At whatever point we may commence the *discantus* or under-part we shall be met, sooner or later, by in-

superable difficulties. We must, therefore, accept the above crude accompaniment as it stands. We can, however, imagine the birth of a more euphonious counterpoint by the—perhaps at first—accidental combination of a portion of the *cantus firmus* with a new commencement of the octave *organum*, as below :—

At the point* the imitation would be interrupted, when the performer would either resume his octave accompaniment or proceed to the invention of further imitations at other intervals. This suggestion is offered with considerable diffidence and only in the absence of any other rational proposition.

6. Into the various musical methods invented by, or attributed to, Guido d'Arezzo, it would be impossible to enter at length, in the present little work ; and many of the descriptions, as given by Hawkins and others, would only be confusing to the student. The chief innovation appears to have been the extension of the old tetrachordal system, introduced by Ambrose and Gregory, to that of the hexachord, or six-note series. This hexachord system is illustrated by the employment of the UT, RE, MI, &c., which form the commencing syllables of the lines we have already quoted (*sec. i. 15*) ; the melody to which they are supposed to have been set by Guido runs as follows :—

It will be observed that the tonality of this chant in no way coincides with that of our modern scale. The invention of the stave, or staff, for the purposes of notation, is popularly ascribed to Guido, though some writers affirm that a seven-lined stave* was in use before his time. For several centuries the size of the stave varied considerably, some employing three, some four, some seven, some eight, others ten, and others, again, as many as eleven lines. From the last mentioned it is stated that our modern five-lined staves are derived, the fixed F and C lines being variously supplemented above and below to suit the respective requirements of the various voices :—

Ex. 6. Divisions of the Great Stave of Eleven lines.

In the ancient missals the C and F lines were either painted in distinctive colours or were written as dotted or thickened lines, with a view to the more readily distinguishing them. They thus served, in a rude fashion, the purpose of the modern clefs, which, in their turn, are a development of the rudimentary forms to be seen in the staves still employed for "Gregorian" music :—

* Of this stave the lines only, not the spaces, were used for the notes.

Ex. 7.

This staff of four lines was the one generally adopted in, and for some time after, the thirteenth century.

7. It would appear that Guido and his contemporaries used notes which were all of the same character and relative time duration, for the first indication of long and short notes we have is from the writings of Franco of Cologne, who gives the *maxima, longa, brevis* and *semibrevis* (sec. i. 16), and thus creates the *cantus mensurabilis*, or measured song. These characters and terms were employed for several centuries, and our modern system of notation is founded upon the invention of Franco. For a long period the system was ascribed to Jean de Meurs (or Muris), but the claim of Franco has since been thoroughly established. Dr. Crotch furnishes the following specimen of Franco's counterpoint, rendered into modern notation:—

Ex. 8.

FRANCO.

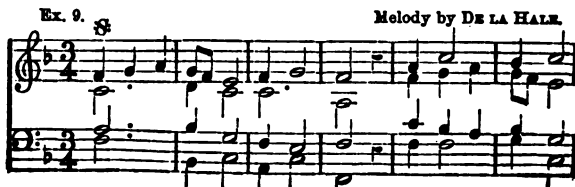

8. We advance a step in the history of counterpoint, when we find Marchettus of Padua, who flourished about the early part of the fourteenth century, giving rules for the alternate employment of consonances and

dissonances. But if we are to place any faith in the authenticity of the preceding example—i. e. if it has not received some “finishing touches” from a later hand—we may be sure that nearly every rule necessary to the production of good counterpoint was known in the time of Franco.

9. The early theorists and historians generally were ecclesiastics, and devoted their attention mainly, if not exclusively, to Church music; consequently there is but little record of the progress of secular music during the first twelve centuries after Christ. There are, however, various allusions to the existence of a race of itinerant minstrels, who visited the houses of the great, and sang to them ballads of which famous exploits or weird legends formed the principal themes. The story of King Alfred assuming the character of one of these wandering musicians, as a safe disguise and passport for admission into the enemy's camp, is a familiar passage in every history of England. There seems little doubt that Alfred was as accomplished a musician as he was a poet, and that he did much to further the progress of musical art in England. By some he is even credited with being the founder of the Chair of Music at Oxford, but there is scarcely sufficient evidence at hand to prove this. These “bards,” or “troubadours,” as they came to be called, led a romantic and adventurous life, and it was no uncommon freak for a man of gentle birth to take up the rôle for a time. Very frequently it so happened that two or more of these poet-minstrels were visiting the same house or hostelry at the same time, and as a natural consequence they entered into friendly competition for the first place in the esteem of their listeners. There is no doubt that this practice developed into the more public “tournaments of song” which formed a strong feature in the musical enterprise of the twelfth and thirteenth centuries. The *Minnesinger* were a famous confraternity of German troubadours who held public competitions for the post of

honour, or laureateship, of the country. A notable contest of the Minnesänger took place about the year 1207, in a town in Saxony. It is affirmed that "the original home of the troubadours was Provence, in the south of France, where they originated about the eighth century. Subsequently, at the time of the German Minnesänger, there were also troubadours in Italy, Spain, and England." The *Eisteddfod*, or annual musical competition in Wales, is a remnant of the old bardic contests of this country. The Meistersänger of Germany were a subsequent race of musicians, who in the fourteenth century sought to revive the ancient exploits of the Minnesänger, and for that purpose formed themselves into bands or guilds for the regulation of contests; but these had a very ephemeral existence. Wagner's opera the *Meistersinger* is founded upon the popular traditions regarding these later troubadours, who were, as a rule, ignorant of the true art of poesy or of musical composition.

10. In the first section of this work (*par.* 17) we have alluded to two or three of the principal troubadours of the thirteenth and fourteenth centuries, and have given the first mention to Adam de la Hale, of Provence. In his "History of Music," Professor Ritter gives two of De la Hale's melodies. The second of these two we shall quote here, with, however, a considerable alteration of Professor Ritter's added harmonies:—

Ex. 9.  Melody by DE LA HALE.

The above is taken from a little musical play, or masque, entitled *Robin and Marion*. De la Hèle composed several of these dramatic pieces, which were a kind of secular counterpart of the ancient miracle-plays or "mysteries"—of which more hereafter.

11. The art of counterpoint received its full development at the hands of the Belgian or Flemish masters, of whom Dufay was the first of any note. It was believed that to this master we owe the invention of the canon, or imitation at regular intervals of one voice by another. Here is a short canon in two parts, "at the octave above," by Dufay:—

EX. 10.

DUFAY.

This specimen exhibits comparatively few crudities. The canon by Jusquin des Prés, of which the following is the commencement, is, however, a striking advance upon the work of Dufay :—

EX. 11.

JUSQUIN DES PRÉS.

The musicians of this (and a later) period gloried in the production of canons, some of which were purposely so enigmatical that it taxed the ingenuity of their contemporaries to discover where they commenced, and at what intervals the various parts were to be employed. As in the poems of George Herbert we find him indulging in quaint metrical devices by which his lines are sometimes made to represent the shape of an altar or of wings, so we find the old contrapuntists moulding their canons into circles or triangles, or so contriving them that they may be sung any way—upside down, or backwards, making equally “good counterpoint” in either case. Most of these caprices must have cost their authors many months of labour and thought; but from a musical point of view they are worthless. As technical studies, however, they were not without a certain value, for they led to the discovery of the furthest resources at the musician’s command, and familiarized him with every form of melodic combination.

12. The Belgian writers carried, as we have seen, the art of counterpoint* to great perfection, and formulated most of the rules which, with a few modifications, are observed by strict contrapuntists at the present day. They divided counterpoint into five principal methods or "species;" the first being note against note (the simplest and at the same time the most severe form); the second, two notes of counterpoint to one of the plain-song; the third, four notes to one; the fourth, syncopated counterpoint; and the fifth, figurate or florid counterpoint. For the benefit of the general reader a short illustration of each species of counterpoint is appended:—

Ex. 12. COUNTERPOINT (*first species*).

PLAIN-SONG, or CANTUS FIRMUS.

Ex. 13. COUNTERPOINT (*second species*).

PLAIN-SONG.

Ex. 14. COUNTERPOINT (*third species*).

PLAIN-SONG.

* *Contra*, against; *punctum*, point, or note.

EX. 15. COUNTERPOINT (*fourth species*).

PLAIN-SONG.

EX. 16. COUNTERPOINT (*fifth species*).

PLAIN-SONG.

13. DESCANT was an art by which the singer was able to add to a plain-song at sight a kind of rough counterpoint consisting entirely of concords—the unison, third, fifth, sixth, and eighth. The early writers laid down a number of rules as to the employment of these intervals by the singer. The counterpoint in Ex. 12 would serve as an illustration of the allowed progression and intervals in descant. FABURDEN (or *falso bordone*) was a yet simpler form of counterpoint, and was originally, as the term indicates, nothing but a drone bass, or “tonic pedal.” The term was used afterwards to signify a simplified species of descant, moving, for the most part, in thirds or sixths. The following fragment of an example given by Morley will best show the nature of the faburden:—

EX. 17. PLAIN-SONG.

The faburden, when written, was always placed *under* the plain-song.

14. In an earlier portion of this work (i. 24) we have alluded to the practice by the Belgian composers of employing the plain-song of the Church or the secular melody as the "given subject" on which to build their counterpoint. The first (so far as we know) to break through this established custom was Des Prés, who frequently invented his own subjects, and may be regarded as the first COMPOSER of modern music.*

15. It was not, however, until after the time of Palestrina that the ecclesiastical modes were entirely set aside for the modern major and minor scales. But Palestrina and his contemporaries had learnt to discard the circumscribed plain-song and the frivolous air, and—the former in an especial degree—gave to Church-music not only dignity but sweetness and expression.

16. The date of the introduction into the Church of music other than the liturgical (by liturgical music is understood the Mass, the setting of the Psalms and Canticles, &c.) is not precisely known. The *miracle-play*, which was the precursor of the *Oratorio*, was a very ancient institution, originally introduced by the ecclesiastical authorities as a means of popular instruction in sacred doctrine and history, but afterwards corrupted by the gradual introduction of absurd and monstrous traditions respecting our Saviour and his apostles, and by the interpolation of ludicrous soliloquies and dialogues. The reader may gain a very fair idea of these miracle-plays, or "mysteries," from the example which Longfellow gives in his well-known poem "The Golden Legend." *L'Anima e Corpo* (i. 33), produced as a specimen of the reform which St. Philip de Neri initiated in the sixteenth century, is little more than a "mystery" play, although it formed the immediate inau-

* The term "modern music" is used in contradistinction to that which existed in the ancient or ante-Christian periods.

guration of the oratorio. The stage-directions of Cavaliere, the composer of the music of *L'Anima e Corpo*, are cited by Dr. Burney as follows :—"It is recommended to place the instruments of accompaniment behind the scenes,* which, in this first oratorio, were the following : A double lyre, a harpsichord, a large or double guitar, and two flutes.—1. The words should be printed, with the verses correctly arranged, the scenes numbered, and characters of interlocutors specified.—2. Instead of the overture, or symphony, to modern musical drama, a madrigal is recommended, as a full piece, with all the voice parts doubled, and a great number of instruments.—3. When the curtain rises, two youths, who recite the prologue, appear on the stage ; and when they have done, *Time*, one of the characters in the Morality, comes on, and has the note with which he is to begin given him by the instrumental performers behind the scenes.—4. The *Chorus* are to have a place allotted them on the stage, part sitting and part standing, in sight of the principal characters ; and when they sing they are to rise and be in motion, with proper gestures.—5. *Pleasure*, another imaginary character, with two companions, are to have instruments in their hands, on which they are to play while they sing and perform the ritornels.—6. *Il Corpo*, the Body, when these words are uttered, '*Si che hormia alma mia*,' &c., may throw away some of his ornaments, as his gold collar, feather from his hat, &c.—7. The *World*, and *Human Life* in particular, are to be gaily and richly dressed ; and, when they are divested of their trappings, to appear very poor and wretched, and at length dead carcases.—8. The symphonies and ritornels may be played by a great number of instruments ; and, if a violin should play the principal part, it would have a good effect.—9. The performance may be finished with

* It is noticeable that Wagner has reverted to this old practice of concealing the orchestra.

or without a dance. If without, the last chorus is to be doubled in all its parts, vocal and instrumental; but if a dance is preferred, a verse beginning thus: '*Chiostrì altissimi, e stellati*,' is to be sung, accompanied sedately and reverentially by the dance. Then shall succeed other grave steps, and figures of the solemn kind. During the ritornels the four principal dancers are to perform a ballet, '*saltato con capriole*,' enlivened by capers or *entrechats*, without singing, and thus, after each stanza, always varying the steps of the dance; and the four principal dancers may sometimes use the *galiard*, sometimes the *canary*, and sometimes the *courant* step, which will do very well in the ritornels.* —10. The stanzas of the ballet are to be sung and played by all the performers within and without." This description, which presents to the mind a thing totally foreign to the modern idea of an oratorio performance, is valuable as showing that the original intention of the promoters was to establish a sacred drama, not a lengthy religious cantata, under the title "oratorio." But very few of the oratorios which are popular at the present day are literally dramatic. The *Messiah* or the *Creation* could not possibly be adapted to the stage without mutilation. On the other hand Bach's *Passion* (that of *St. Matthew* in particular) would seem to approach very nearly to the old idea of the oratorio, a sacred musical drama, with its narrator, and the responsive double choirs.

17. It will be seen that the early oratorio was constituted of the recitative, the chorus, and the *ritornello* or instrumental interlude. The recitative, or *musica parlante*, introduced as a revival of the old Greek form of musical declamation, was employed chiefly as a vehicle for the narrative portions of the sacred play. It was usually sung to the accompaniment of the theorbo (arch lute) or of the spinnet or harpsichord. Cavaliere in oratorio, and Monteverde in opera, effected some

* *Ritornello*,—an interlude or *entr' acte*.

improvements upon the original crude *recitativo*, but Carissimi gave it an established form; and the *Arioso* sprang out of these continued elaborations. The *Aria*, with its "binary" construction, was a still later development. The following example of recitative is taken from Mr. Leslie's edition of Carissimi's oratorio, *Jonah*:—

EX. 18. RECITATIVE from *Jonah*.

CARISSIMI.

The musical score is written for a voice and keyboard. The vocal line is in G major, 4/4 time, and features a recitative style with a mix of eighth and quarter notes. The keyboard accompaniment is in G major, 4/4 time, and features a mix of eighth and quarter notes. The score is divided into three systems, each with a vocal line and a keyboard line. The first system includes the lyrics "And there-up - on they cast lots, and be-hold the". The second system includes the lyrics "lot did fall up-on Jo - nah. So all the men who were". The third system includes the lyrics "in the ship said un - to him." The tempo marking "a tempo moderato." is placed below the second system. The score is written in G major, with one sharp (F#) and a common time signature (C).

And there-up - on they cast lots, and be-hold the

lot did fall up-on Jo - nah. So all the men who were

a tempo moderato.

in the ship said un - to him.

A short extract from the same oratorio will serve as a fair illustration of the dramatic chorus-music of the seventeenth century :—

Ex. 19. CHORUS from *Jonah*.

CARISSIMI.

So they did take up Jo-nah, and did cast him forth in - to the

sea, and the sea did then cease from the fu-ry of its rag-ing.

What has been said of the art-development of the oratorio will apply also to the opera. There is indeed but little distinction to be made between "sacred" and "secular" choral music of those days. The following chorus from an opera by Caccini will show this :—

Ex. 20.

CACCINI.

So they did take up Jo-nah, and did cast him forth in - to the

sea, and the sea did then cease from the fu-ry of its rag-ing.

Until about the middle of the eighteenth century, oratorio took its place as Church music, i. e. it was regarded as an adjunct to, if not indeed an important feature of, Divine worship. Hence the introduction, by Bach, into his Passion Music, of familiar chorales in which the congregation were allowed to take part. Mendelssohn, who was an ardent admirer of Bach, and was mainly instrumental in reviving the popularity of that great master, himself introduces old chorales in his oratorio, *St. Paul*, and also in the *Lobgesang*, which was first performed in the Church of St. Thomas, Leipsic. It was Handel who established the oratorio upon the secular stage, and since his time performances of oratorio have been almost universally confined to the concert-room. Very recently, however, there has been a movement in favour of reinstating this class of music in its original place, and the *Passions* of Bach, and other oratorios, or lengthy selections from them, are now frequently performed in our cathedrals and larger churches. In design and construction, the development of the oratorio progressed side by side with that of other departments of musical art; and save in the matter of orchestration, this species of composition is pretty much where Bach left it. It only remains, therefore, to append a list, chronologically arranged as far as possible, of the principal composers of oratorio, to whose names, occurring in the first section of this work, the reader is referred for further information:—

<i>Name.</i>	<i>Principal Works.</i>
Cavallere (1600),	<i>L' Anima e Corpo.</i>
Carissimi (1580—1673),	<i>Jonah ; Jephtha, &c.</i>
Schütz (1585—1672),	<i>Passion ; Resurrection, &c.</i>
Keiser (1673—1739),	<i>Bleeding and Dying Jesus.</i>
J. S. Bach (1685—1750),	<i>Passion (S. Matthew & S. John).</i>
Handel (1685—1759),	<i>Messiah, Israel in Egypt, &c.</i>
Leo (1694—1746),	<i>Death of Abel.</i>
Graun (1701—1759),	<i>Der Tod Jesu.</i>
Stradella (c. 1750),	<i>St. John the Baptist.</i>

<i>Name.</i>	<i>Principal Works.</i>
Haydn (1732—1809),	<i>Creation; Seasons.</i>
Crotch (1775—1847),	<i>Palestine; Captivity.</i>
Beethoven (1770—1827),	<i>Mount of Olives.</i>
Spohr (1784—1859),	<i>Calvary; Last Judgment, &c.</i>
Mendelssohn (1809—1847),	<i>Elijah; St. Paul.</i>

Among the composers of oratorio of our own day may be mentioned: Macfarren (*St. John the Baptist, &c.*); Costa (*Eli; Naaman*); Benedict (*St. Peter*); Ouseley (*St. Polycarp; Hagar*); Sullivan (*Prodigal Son; Light of the World*). The exquisite sacred cantata of the late Sterndale Bennett (*The Woman of Samaria*) may justly be classed with the oratorio.

18. The **Mass**, a species of composition called forth by the requirements of the Roman liturgy, is of very early date, and may be divided into two classes: the first, *Missæ Solemnis*, sung at high celebrations of the Holy Eucharist; the second, *Requiem*, used at Masses for the Dead. The *Missæ Solemnis* generally consists of the following separate movements: *Kyrie Eleison*, *Gloria in Excelsis* (usually subdivided into *Gloria*, *Domine Deus*, *Quoniam Tu Solus, &c.*). *Credo in unum Deum* (again subdivided into *Credo*, *Et Incarnatus, &c.*), *Sanctus*, *Benedictus*, *Agnus Dei*. The Requiem Mass contains, in addition to the liturgical numbers, — the *Gloria*, however, being usually omitted, — the beautiful Latin hymn known as the *Dies Iræ*. It is seldom that the whole of the *Dies Iræ* is included in the *Requiem*, as the performance of an elaborate setting of every verse would be too wearisome. The verses most commonly selected are *Dies Iræ*, *Tuba mirum*, *Recordare*, and *Lachrymosa*. At first the Mass was sung to an authorized plain-song, which, as the art of counterpoint developed, gradually came to be accompanied by other voice-parts, above and below. Then new melodies, many of them being, as we have seen, popular secular tunes of the period, were introduced as subjects upon which the contrapuntist might exercise his ingenuity in constructing canonic imitations, and so

called fugues (i. 24). This abuse of the art having been denounced by the Council of Trent, Palestrina at once effected wonderful reform by means of his noble Masses, of which we have already given some account (i. 29). For a long period Masses were sung without any kind of instrumental accompaniment; a primitive kind of orchestration was, however, introduced towards the close of the sixteenth century. Since the Reformation, English composers have had no opportunity of distinguishing themselves by setting the "Mass." The Communion Office of the English Church is ill-adapted to an elaborated musical treatment. The *Kyrie Eleison* is only a short response repeated after each Commandment; the *Benedictus* and *Agnus Dei*, though still used without authority in some churches, are unusual subjects; while the remainder cannot be split up into detached movements. The single-voice setting known as Merbecke's is an adaptation of a traditional plain-song, with a number of interpolations by Merbecke himself. In Roman Catholic Churches the Mass has always been the principal function; consequently every known resource has at all times been employed to give grandeur and solemnity to this portion of the Roman liturgy. The compositions of Mozart, Haydn, Beethoven, Schubert, and other modern composers were therefore arranged for soli, chorus, and full orchestra.* The principal composers of this form of work are very numerous, and in the following list we do not attempt to include other than the most notable amongst them:—

Dufay (1380—1430).
 Ockenheim (1430—1513).
 Des Prés (1440—1521).
 Palestrina (1514—1594).
 Lassus (1520—1595).
 Byrde (1543—1623).
 Allegri (1580—1652).

* At St. Peter's, Rome, however, no instrumental accompaniment of any sort is permitted.

Scarlatti (1659—1725).
 Fux (1660—1732).
 Caldara (1678—1763).
 Marcello (1680—1739).
 Bach (1685—1750).
 Leo (1694—1746).
 Durante (1693—1755).
 Feo (1699—1750).
 Hasse (1699—1783).
 Pergolesi (1710—1736).
 Graun (1701—1759).
 Haydn (1732—1809).
 Webbe (1740—1816).
 Paesello (1741—1816).
 Naumann (1741—1816).
 Martini (1741—1816).
 Zingarelli (1752—1837).
 Mozart (1756—1791).
 Cherubini (1760—1842).
 Beethoven (1770—1827).
 Hummel (1778—1837).
 Weber (1786—1826).
 Rossini (1792—1868).
 Schubert (1797—1828).
 Berlioz (1803—1869).

19. But while the English School was deprived of so complete a subject—from a musical point of view—as the Mass, the purified liturgy of the Anglican Church still afforded the musician ample scope for the exhibition of his imagination and skill. There yet remained to him the *Te Deum*, *Magnificat*, and other Canticles, the Psalms and Hymns, and that other important item, peculiar to the Church of England, the Anthem.

20. The Anthem was always regarded as the principal feature of the English "Cathedral Service," as it could be elaborated at the will of the composer, and was generally of two or more movements. The words of Anthems are, as a rule, taken from Scripture; but sometimes portions of the Prayer Book (the Collects for instance) have been used. *Verses Anthems* are such as contain

one or more movements assigned to a single voice, or to a duet, trio, or quartet; usually concluding with a chorus. There are many instances, however, of verse Anthems in which the only movements are for solo voices. *Full Anthems* are those in which the whole choir may take part throughout. *Verses* are of very frequent occurrence in Anthems and Service-music, as Church composers were naturally desirous of displaying the leading voices in the Cathedral or other Church choirs under their charge. Some of these "verses" are very elaborate—almost to tediousness; a fair specimen of this kind of anthem is *I was in the Spirit*, by Dr. Blow. The "verse" parts in Cathedral music, with the exception of solos, are generally sung without accompaniment, while the "full" portions, or choruses, are accompanied by an organ-part, sometimes independent, but more usually a mere "doubling" of the voices. Most of the following composers of Anthems have also written Service-music, *i. e.* settings of the Canticles and Communion Office; and what we have said about the Anthem applies also to the Service-music of our Cathedrals.*

<i>Names.</i>	<i>Anthems.</i>
Tye (1500—1560),	† <i>I will exalt Thee, &c.</i>
Tallis (1523—1585),	† <i>I call and cry, &c.</i>
Byrde (1543—1623),	† <i>Bow down Thine ear.</i>
Gibbons (1583—1625),	† <i>Hosanna to the Son of David,</i> <i>&c.</i>
Child (1608—1696),	† <i>Praise the Lord, O my Soul.</i>
Blow (1648—1708),	† <i>I beheld, and lo, &c.</i>

* The student is recommended to procure as many as he can of the Anthems here enumerated; and if he study them in their chronological order he will gain a better insight than any verbal description will give him, into the development of form and style, as well as the individual characteristics of each composer.

† Anthems thus marked have been published (or republished) within a recent date, and are easily procurable.

Names.

Anthems.

Wise (<i>d.</i> 1687),	<i>Prepare ye the way.</i>
Purcell (1658—1695),	† <i>O give thanks.</i>
Clark (<i>d.</i> 1707),	† <i>I will love Thee.</i>
Aldrich (1647—1710),	† <i>O Praise the Lord.</i>
Croft (1677—1727),	† <i>God is gone up, &c.</i>
Greene (1698—1755),	† <i>O Clap your hands.</i>
Kent (1700—1736),	† <i>Hear my prayer.</i>
Handel (1685—1759),	<i>Chandos Anthems.</i>
Weldon (1708—1736),	† <i>Hear my crying.</i>
Boyce (1710—1779),	† <i>By the waters of Babylon.</i>
Travers (<i>d.</i> 1758),	† <i>Ascribe unto the Lord.</i>
Nares (1715—1783),	† <i>Blessed is he that considereth</i>
Battishill (1738—1801),	† <i>Call to Remembrance.</i>
Arnold (1739—1802),	† <i>Who is this that cometh.</i>
S. Wesley (1766—1837),	† <i>Thou, O God, art praised.</i>
Crotch (1775—1847),	† <i>How dear are Thy counsels.</i>
Attwood (1767—1838),	† <i>Come, Holy Ghost.</i>
Clarke-Whitfield,	† <i>Behold, how good and joyful.</i>
Mendelssohn (1809—1847),	† <i>Judge me, O God.</i>
Walmisley,	† <i>Father of Heaven.</i>
Sterndale Bennett (1816—1875),	† <i>O that I knew.</i>
S. S. Wesley (<i>d.</i> 1876),	† <i>The Wilderness.</i>
Dykes (<i>d.</i> 1876),	† <i>These are they.</i>

Among the most prominent writers of Anthems and Service-music in the present day are, Goss, E. J. Hopkins, Macfarren, Ouseley, Elvey, Sullivan, Stainer, Stewart, Steggall, Turle, Barnby, Bridge, Calkin, Garrett, Smart, Thorne, and Tours. Some modern Anthems have been scored for full orchestra, and are more dramatic and descriptive in style than those of the older writers.

21. Many pages might be taken up with the history of the Hymn-tune, or Chorale, a species of composition which, because it is easily learned by ear, becomes the special property of the people, and like an heirloom, is handed from generation to generation. Many "Gregorian" hymn-tunes are in use at the present day, and it is needless to say that they are of the most ancient date; but their presence in the hymnals of our day is

due, not to their having been treasured up by the masses, but to the zeal of a few musical antiquarians. Of these about the best are *Urbs beata*, *Jesu dulci memoria*, and *Corde natus*, named respectively after the first words of the Latin hymns to which they were composed. Ex. 17 (par. 13) will show the commencement of an ancient tune very familiar to those accustomed to the use of a certain Church hymnal.* The scales in which these old melodies are written are ill-suited to the modern process of harmonization, and the vocal harmonies added to many of these "Gregorian" tunes are necessarily forced and disconnected, leaving no impression of a distinct tonality — they are, in short, without beginning and without end. For many of the old tunes which are really and truly the heritage of the English and German nations we are indebted to the great religious movement of the sixteenth century under Luther, who, with the aid of Walther and Goudimel, published the first collection of chorales to words in the vernacular (1524). The two chorales, *Ein' feste burg ist unser Gott* (*a strong tower is our God*), and *Great God, what do I see and hear*, are both ascribed to Luther, but it is doubtful whether he really composed them, though he may have arranged or harmonized them for Walther's book, probably with some help from Goudimel or Clemens non Papa. "The Old Hundredth" has been variously ascribed to Luther, to Goudimel, and to Guillaume Franc; all that is positively known concerning this immortal tune is that it was published about the year 1550. It is by no means improbable, however, that it had actual existence, either "orally" or in manuscript, even before that date. Many of these ancient hymn-tunes were doubtless quotations or adaptations from larger works. Tallis's Canon, well-known in our time in connection with the Evening Hymn, belongs to this class:

* *Hymns Ancient and Modern.*

Ex. 21. TALLER.

The canon, "at the octave below," is between the treble and tenor voices, and these parts are given in larger notes for the sake of distinctness. The other two parts serve to complete the harmony. Moreover, if the experiment be tried, it will be found that the Old Hundredth can be made, with only three alterations (marked *), to form a crude kind of "canon, two in one at the octave below," at the half-bar distant :

Ex. 22. OLD HUNDREDTH.

It will also be observed that this "canon" is infinite

or perpetual, on examining the two points † †. The alterations (* and **) might easily be accounted for. That such a combination, crude as it is, will be regarded in the light of a mere coincidence, we can hardly anticipate. The fact that many of the old masters were accustomed to take fragments of chorales as subjects for fugal writing, would seem to prove that these ancient melodies were often originally composed with a view to canonic imitation, more or less strict, in the accompanying voices. We might multiply instances, but the following fragments will suffice for our present purpose :

Ex. 23. (From the *Württembergischer Gesangbuch*—1583 [?].)

Esslingen.

KRIEGER (c. 1650).

Our modern hymn-tunes are in too many cases characterized by a straining after vivid effects in harmony, to the exclusion of the flowing counterpoint which gives an unmistakable grace and dignity to the old chorale. It is unnecessary to attempt to catalogue the names of composers of hymn-tunes; the best amongst our English writers will be found amongst the composers of anthems mentioned in the preceding paragraph.

22. We now pass into the dominion of secular music. After the "folk-songs" of the troubadours, which had a long and uncontested popularity for many ages, came the **Madrigal**, a kind of part-song, about the precise origin of which there has been a great deal of useless speculation. The term "madrigal" has been variously accounted for, some opining that it comes from *madre di gala*, or "mother of the festival"—in allusion to the Virgin Mary as patron of the month of May, with its olden pastoral festivities; others that the name is derived from that of the Spanish town, Madrigal, where one, Don Jorge, an early writer of "madrigal" poetry, lived, and whence, after the fashion of those days, he derived his surname, "de Madrigal." Other theories have been advanced, but they are not even worth mentioning; the most feasible is that which assigns the term to the above prolific and popular writer of madrigal poetry; for it has been in all ages the custom to associate a thing with the name of a noted producer. The earliest form of madrigal, but for the secular words—generally of a pastoral, or an amorous character—could hardly be distinguished from the sacred motett, or anthem. There is little doubt, moreover, that for a long period the madrigal was written for voices only—it was a chorus, in fact, with-

out instrumental accompaniment. The madrigal composers of the Elizabethan era greatly developed and extended this form of composition, freely employing canonic imitation, and other contrapuntal devices. The ancient "Ballets" and "Fa las" were also a species of madrigal, but were usually of a more light and trifling kind, and bore little resemblance in form to the madrigal proper. Some historians have assigned the introduction of the madrigal to Adrian Willaert, chapel-master of St. Mark, Venice, but this is uncertain; at all events it is known that his successor at St. Mark's, Cyprian de Rore, devoted himself to this form of composition, and gained a high reputation for it. The latter part of the sixteenth century was the golden age of the madrigal, particularly in England, under the reign of Elizabeth, who fostered music no less than the other liberal arts. *The Triumphs of Oriana*, dedicated to Queen Elizabeth, is the finest collection of madrigals extant (i. 27). The best of these are popular even in the present day. Luca Marenzio, a friend of Dowland, was one of the most accomplished among the many Italian madrigalists of the sixteenth century. The madrigal, *Dissi a l'amata*, quoted *in extenso* by both Hawkins and Crotch, opens as follows:—

Ex. 24.

MARENZIO.

The above is a compression of the vocal score; the madrigal pure was not accompanied as a rule, though indeed there are many madrigals extant with *basso continuo*, or bass figured for lute or harpsichord. The modern "madrigal" is hardly distinguishable from the "part-song;" i. e. it contains a continuous melody, and is generally provided with a pianoforte accompaniment. The following is a sufficiently comprehensive list of the chief madrigal composers, and the madrigals mentioned are those of especial note at the present day:—

*Name.**Madrigal.*

Willaert [?] (1490—1563),
Festa (d. 1545),

*Quando ritrovo (Down in a
flowery vale).*

De Rore (c. 1580).
Palestrina (1514—1594).
R. Edwardes (1520—1566),
Marenzio (1550—1594),
Byrde (1543—1623),
Wilbye (1560—1612),
Dowland (1562—1626),
Morley (1563—1604),
Benet (1565—1605),
Gibbons (1583—1625),

*In going to my lonely bed,
Dissi a lamata.
While the bright sun,
Flo-a gave me fairest flowers.
Awake, sweet love.
My bonny lass.
Ye restless thoughts.
Oh that the learned poets.*

After Gibbons the madrigal deteriorated, and though T. Linley, W. Horsley, W. Callcott, and R. L. Pearsall have contributed some excellent models, this species of composition may be regarded as belonging to the past.

23. The Glee was an offshoot, or, more correctly, a later development of the madrigal. While the latter consisted of only one movement, the glee had two, three, and four. The glee was also written for solo voices in each part, and therefore was capable of much greater style and finish than the madrigal, which was designed for the chorus. In the present day the glee is more popular than its precursor, doubtless because the style of the former is in greater accordance with the requirements of modern art. The glee is now frequently sung by modern choral societies, by which means, although some of these bodies are highly trained and capable of putting great expression into the music they sing, the real charm of the glee is lost. At one time Rounds and Catches were the most popular "domestic music" in vogue, and many of these catches were, in fact, glees in which a punning expression was given to the words. To this day glees are divided into two kinds—the serious and the cheerful—though the latter does not necessarily imply a playing upon words. The father of the English glee was Thomas Brewer, whose *Turn Amaryllis* is still a favourite at the glee-clubs. The writers of glees have been so numerous that we cannot give more than the leading glee-composers in the following list:—

<i>Name.</i>	<i>Glees.</i>
T. Brewer (1609—1676),	<i>Turn Amaryllis.</i>
T. Arne (1710—1778),	<i>Which is the properest day, &c.</i>
S. Webbe (1740—1816),	<i>When winds breathe soft.</i>
Stafford Smith (1750—1836),	<i>Blest pair of sirens.</i>
R. J. S. Stevens (1723—1837),	<i>Sigh no more, ladies.</i>
Dr. Callcott (1766—1821),	<i>The Red Cross Knight.</i>
B. Spofforth (1770—1827),	<i>Hail, smiling morn.</i>

Name.	Gloss.
W. Horsley (1774—1858),	<i>By Cella's Arbour.</i>
Sir H. Bishop (1782—1855),	<i>I gave my Harp.</i>
Sir J. Goss (b. 1800),	<i>Ossian's Hymn to the Sun.</i>

24. Our first section contains a brief account of the rise of the Opera (par. 32), and, so far as it goes, there is little to add here. It is to be noticed, however, that many composers of later periods considered the subjects of the primitive operas worthy of further experiment. *Dafne*, *Euridice*, and *Orfeo* have received new interpretations since the times of Peri, Caccini, and Monteverde—the *Daphne*, for instance, of Schütz and of Handel, and the *Orfeo* of Gluck. From the year 1594, the date of the production of Peri's *Dafne*, to the year 1627, the opera appears to have been confined exclusively to Italy, its native home. In 1627, however, Schütz' *Daphne* formed the introduction of opera into Germany, which has since done so much for this branch of the art. In 1645 *Italian* opera was introduced into France under the auspices of Cardinal Mazarin, but the first French opera was that of Cambert (*La Pastorale*), composed in 1659. England follows very closely upon France, for in 1673 was produced the *Psyche* of Lock.

25. A complete, though concise, history of the opera would fill a volume like the present, and an account of Italian opera alone would occupy three-fourths of the space. Our remarks upon Italian opera must therefore be very sparing, and we shall not unnecessarily repeat any statements made in former sections, which may be readily referred to upon occasion by means of the General Index. From the date of its inauguration under Peri and Caccini, the opera in Italy has not ceased, up to the present day, to keep pace with the general progress of the art. The vocal features of the opera are now and have always been,—as in the case of the oratorio,—the recitative, the aria,

the duet (and occasionally the trio, quartet, quintet, &c.), and the chorus.* The instrumental accompaniments, the overture, and the interludes (*entr'actes*) or symphonies, were also in the earlier days of the opera very similar to those of the oratorio. By degrees, however, the similarity to the oratorio as regards both style and treatment became less and less, and at this time the oratorio and the opera have little in common. It is in the works of Monteverde that the first signs of a greater freedom in the treatment of secular subjects are apparent; witness the following extracts—portions of recitative and duet from his *Orfeo*.—

Ex. 25. (*Apollo descends in a cloud, singing.*) MONTEVERDE.

Voice.

Perch' a lo sdegno ed al de-lor in pre-da Co-

BASSO CONTINUO.

BASSO CONTINUO.

Salliam, . . .

* Even the Chorale has been introduced, when suited to the scene or occasion.

The musical score consists of three systems, each with three staves. The top staff of each system is for the voice (Duet), the middle for the lute (Accomp.), and the bottom for the lute (Accomp.). The key signature is one flat (B-flat), and the time signature is common time (C). The lyrics are written below the voice staff.

System 1:
 Duet: Can - tan
 Accompt.:
 Accompt.:

System 2:
 Duet: Can
 Accompt.:
 Accompt.:

System 3:
 Duet: d'al Cie - lo,
 Accompt.:
 Accompt.: tan . . . d'al Cie-lo.

After Monteverde, the next great light of the Italian opera was A. Scarlatti, known as the founder of the so-called Neapolitan School. His operas, *Carlo Re d'Almagna*, *Il Ciro*, and others, were an immense advance upon their predecessors, and obtained for him the first place among the opera-composers of his day. His style would now be considered stilted and conventional, but they have decided form, and mark an epoch in the development of the aria. Lotti and Sacchini were the immediate successors of Scarlatti,

while Piccini was, as we know, the favoured champion of the Italian school in France. Gluck, Hasse, Mozart, and other German composers contributed largely, if not mainly, to Italian opera; while Handel, German as he was by nationality, was essentially Italian in opera. Gluck in his later operas (i. 45, 46), such as *Orfeo* and *Alceste*, was the first to break from the established lines, and the *Zauberflöte* of Mozart is generally looked upon as the pioneer of a distinct German school of musical drama. The little-known *Euryanthe* of Weber is still more decidedly "German," but Richard Wagner has gone beyond all others in the noted "Tetralogy" of 1876. Wagner has initiated a complete revolution in opera, discarding the set airs, and substituting for them a modernized *musica parlante*, or recitative. He declines to write melodies for the purposes of mere vocal display. The old traditions as to the "related keys" are cast aside without compunction. In short he makes music entirely subservient to the dramatic element. With him, the *libretto* is no longer a species of lay figure upon which to hang any kind of musical drapery or embroidery that the composer may fancy or the singer desire. Wagner composes his own libretti, and this fact illustrates the fundamental principle on which he works, and of which he is so strenuous an advocate. This principle is, that the music, the poetry, and the *mise-en-scène* of an opera should each aid, not over-weight the other, and thus unite to produce the desired dramatic effect. The old opera may be regarded, on the other hand, as a collection of vocal and instrumental compositions or numbers, each complete in itself as to form, and strung together by the story of the libretto. In fact, Wagner's dramatic music is so far removed from that which for ages has been known as "opera," that it has been difficult for musicians or the public to connect the former with the latter. They therefore say "this is not opera," and some few add "nor even music." It is,

however, to be remembered that no musician has ever ventured upon a new path without bringing upon himself and his work the doubt, suspicion, or contempt of the majority of his contemporaries, who are naturally satisfied with what their predecessors and themselves have done. In such cases it is posterity which assigns to a musician or thinker (a composer must be both) his rightful place in the realm of art. If we view the subject from Wagner's new standpoint, all previous opera can only be regarded as of the Italian type, whether produced by Italian, German, French, or English composers. Thus, the operas of Purcell, though the words are English, were avowedly constructed upon Italian models, and the same may be said of the works of every English composer of opera, from Lock to Balfe. In short, the success of the English composer has been in proportion to his power of assimilation to the Italian style. To the French composers, from Cambert to Gounod, though many splendid works have been produced, we may apply the same terms. Germany, however, may claim the honour of effecting most of the improvements which are now universally accepted as essentials. Gluck's *Orfeo*, Mozart's *Zauberflöte*, Weber's *Euryanthe*, Wagner's *Lohengrin*, are so many landmarks in the development of opera; and such a view is not inconsistent with the conviction that the works of Purcell or Handel in the past, and of Verdi or Gounod in the present are important contributions to musical art. The following are the most celebrated opera-composers of every school, and further information respecting each may be gained on reference (by means of the General Index) to the name wherever it occurs in our first section :—

Name.
Peri (c. 1600),
Caccini (c. 1600),

Principal Works.
Dafne.
*Euridice.**

* Jointly with *Peri*.

<i>Name.</i>	<i>Principal Works.</i>
Monteverde (1566—1659),	<i>Orfeo, Arianna, &c.</i>
Schütz (1585—1672),	<i>Daphne.</i>
Cambert (c. 1659),	<i>La Pastorale.</i>
Lock (1620—1677),	<i>Psyche.*</i>
Lully (1633—1687),	<i>Tragédies Lyriques.</i>
Henry Purcell (1658—1695)	<i>Dido and Æneas, King Arthur</i> <i>&c.</i>
Lotti (1660—1740),	<i>Various.</i>
A. Scarlatti (1659—1725),	<i>Carlo Re d'Almagna.</i>
Keiser (1678—1739),	<i>More than 100 operas.</i>
Rameau (1683—1764),	<i>Castor and Pollux.</i>
Handel (1685—1759),	<i>Almira, Rinaldo, &c.</i>
Leo (1694—1745),	<i>Olympiade.</i>
Hasse (1699—1783),	<i>Various.</i>
Clayton (c. 1700),	<i>Arsinolè, Rosamund.</i>
Graun (1701—1759),	<i>Various.</i>
Pergolesi (1710—1736),	<i>Various.</i>
Arne (1710—1778),	<i>23 Operas (Artaxerxes, &c.).</i>
Boyce (1710—1779),	<i>The Chaplet.</i>
D'Auvergne (1713—1797),	<i>Les Troqueurs.</i>
Gluck (1714—1787),	<i>Orfeo, Alceste, Armide, &c.</i>
Benda (1722—1795),	<i>Ariadne auf Naxos, Medea.</i>
J. A. Hiller (1728—1804),	<i>Liederspiele.</i>
Piccini (1728—1800),	<i>Roland, &c.</i>
Monsigny (1729—1817),	<i>Rose et Colas, Le Déserteur.</i>
Arnold (1739—1802),	<i>40 English Operas.</i>
Grétry (1741—1813),	<i>Zemire et Azor, &c.</i>
D'Alayrac (1753—1809),	<i>Les Deux Sarcophages.</i>
Mozart (1756—1791),	<i>Don Giovanni, Figaro, Zauber-</i> <i>flöte, &c.</i>
Cherubini (1760—1842),	<i>Les Deux Journées, Medea, &c.</i>
Storace (1763—1796),	<i>14 English Operas.</i>
Mehul (1763—1817),	<i>Joseph, Euphrosyne.</i>
Himmel (1765—1814),	<i>Fanchon.</i>
Berton (1766—1844),	<i>Ponce de Leon, &c.</i>
Beethoven (1770—1827),	<i>Fidelio (Leonora).</i>
Catel (1778—1830),	<i>Sémiramis.</i>
Boieldieu (1775—1834),	<i>La Dame Blanche.</i>
Isouard (1777—1818),	<i>Cendrillon.</i>

* The celebrated "Macbeth Music" has recently been claimed for Purcell.

<i>Name.</i>	<i>Principal Works.</i>
Auber (1782—1871),	<i>Fra Diavolo, Masaniello.</i>
Sir H. Bishop (1782—1855),	<i>Miller and his men, &c.</i>
Spohr (1784—1859),	<i>Faust, Jessonda.</i>
Spontini (1784—1851),	<i>La Vestale.</i>
Weber (1786—1826),	<i>Der Freischütz, Preciosa,</i> <i>Euryanthe.</i>
Herold (1791—1833),	<i>Zampa.</i>
Rossini (1792—1868),	<i>Guglielmo Tell, Semiramide,</i> <i>&c.</i>
Meyerbeer (1794—1864),	<i>Les Huguenots, L'Africain.</i>
Schubert (1797—1828),	<i>Rosamunde</i> (incidental music).
Donizetti (1797—1868),	<i>Lucrezia Borgia, Lucia, &c.</i>
Halevy (1799—1862),	<i>La Juive, Les Mousquetaires.</i>
Bellini (1802—1835),	<i>Norma, La Sonnambula.</i>
Berlioz (1803—1869),	<i>Benvenuto Cellini.</i>
Sir J. Benedict (b. 1804),	<i>Gipsy's Warning, Lily of Kil-</i> <i>larney.</i>
Balfe (1808—1870),	<i>Bohemian Girl, Talisman.</i>
Mendelssohn (1809—1847),	<i>Wedding of Canacho, &c.</i>
Schumann (1810—1856),	<i>Genevieve.</i>
Flotow (b. 1811),	<i>Marta.</i>
Wagner (b. 1813),	<i>Tannhäuser, Lohengrin, Nibe-</i> <i>lungen.</i>
Wallace (1814—1865),	<i>Maritana, Lurline.</i>
Verdi (b. 1814),	<i>Il Trovatore, Rigoletto, Aida.</i>
Gounod (b. 1818),	<i>Faust, Romeo et Juliet.</i>
Ambroise Thomas	<i>Mignon, Hamlet.</i>
Offenbach	<i>Orphée aux Enfers, &c.</i>

26. The following brief chronological summary of the rise and progress of Opera will further assist the student :—

Society of <i>Litterati</i> established in Florence for the purpose of reviewing "the ancient Greek art of musical and dramatic declamation" (<i>musica parlante</i>)				
First opera, <i>Dafne</i> , by Peri, libretto by Rinuccini	(c.) 1580
<i>Euridice</i> , by Peri and Caccini	1594
Monteverde gives a more pronounced form to the Opera, and produces <i>Orfeo</i> , &c.	(c.) 1600
Introduction of the Opera into Germany—Schütz	(c.) 1650
<i>Daphne</i>	1637

Opera introduced at Venice	1637
Italian Opera introduced into France under Mazarin	1645
Opera introduced at Naples	1647
First French Opera, <i>La Pastorale</i> , by Cambert	1659
Improvement of the Recitative, by Carissimi, Invention of Arioso	(c.) 1660
[Orchestra of the period, "small French violin," tenor and bass viola, harpsichord, theorbo, flute à bec, trumpets, trombones, &c.]			
Opera introduced at Rome	1671
First English Opera, <i>Psyche</i> , by Lock	1673
Lully, the supposed originator of the overture, which he composed in two movements, <i>Adagio</i> and <i>Allegro</i>	(c.) 1680
Purcell composes <i>The Tempest</i> , and other English Operas	1690
A. Scarlatti develops the Aria, giving it what is now known as the "ancient binary" form	(c.) 1700
Handel's first Opera, <i>Almira</i> , at Hamburg	1705
Italian Opera introduced into England; performance of <i>Arrinoë</i> (with English words, however,) at Drury Lane	1706
Revival of Italian Opera in England—Handel's <i>Radamistus</i> produced	1720
Handel's new Opera Company started	1729
Gluck's first Opera, <i>Artaxerxes</i> , produced at Milan	1741
Gluck visits England; writes operas for the Haymarket Opera House	1745
Hasse writes for the German stage, but on Italian models	(c.) 1750
<i>Les Bouffons</i> appear in France	1752
Production of Gluck's <i>Orfeo</i> at Vienna	1764
Gluck goes to Paris	1773
The "Gluckist and Piccinist" factions in Paris	1776
Mozart's <i>Idomeneo</i> produced at Munich	1781
Metastasio, the celebrated poet and Opera librettist, dies	1782
Mozart's <i>Don Giovanni</i> first performed	1787
Mozart's <i>Zauberflöte</i> first performed at Vienna	1791
Arne, Arnold, Storace, and others produce a number of English Operas	1750—1800
Cherubini's <i>Les Deux Journées</i> produced	1800
Beethoven's <i>Leonora</i> produced at Vienna	1805
<i>Leonora</i> reproduced as <i>Fidelio</i> , with new overture	1814

First performance of Spohr's <i>Faust</i> , at Prague	...	1816
Weber's <i>Der Freischütz</i> and <i>Preciosa</i> produced	...	1820
[Weber is supposed to have set the fashion of incorporating principal airs of the opera in the overture.]		
Meyerbeer's <i>Les Huguenots</i> produced	...	1836
Wagner's <i>Nibelungen</i> (Tetralogy) produced at a public festival in Bayreuth, Germany	...	1876

27. We have hitherto restricted our attention to the development of vocal music, accompanied or unaccompanied. We now turn to the consideration of purely **Instrumental Music**, a very wide branch of our subject, as it ranges from the pianoforte *morceau* to the elaborated symphony—from the “solo instrument” to the “full orchestra.” The independent employment of instrumental music dates from a very early period. The Egyptian monuments show that bands of harps and other instruments existed in almost pre-historic times; certainly we can form no idea of the style or effect of the concerted music produced by these ancient minstrels. In the latter days of the old Grecian empire there sprang up a race of flute-players, but we are equally ignorant as to the nature of their performances. In the earlier ages of the Christian era instruments were generally used as an accompaniment to the voice; in fact the history of modern instrumental music as a distinct art, and as we now understand it, does not commence until about the sixteenth century. It is true that Royalty had its private bands as well as its vocalists, at a much earlier date, but if we except the startling “pibroch” of the Scottish bagpipes, the precise nature of the music performed is practically lost to us. Probably the *repertoire* of these old bands—such as the band of *weyghtes* or hautboys employed by Edward III. of England—consisted only of dance-tunes and the well worn airs of popular songs. Nevertheless these ancient dance-tunes may be regarded as supplying the germs of some of the most elaborated forms of modern composition. The *coranto*, the *gavotte*, the

gigue the *sarabande*, the *allemande*, the *galliard*, were all ancient dances, afterwards made "classical" by the studies of Corelli, Bach, Purcell, and other illustrious composers of the seventeenth and eighteenth centuries. The *suites-des-pièces* of these writers consisted of sets of three, four, or even a greater number of movements modelled upon these old dance-forms, and grouped together with a due regard to contrast between the pace or measure of each kind of dance. The following short extracts, taken from various sources,* will give the reader some idea of the principal dance-forms utilized in these *suites* :—

EX. 26. CORANTO. (*Lively.*)

WHITELOCKE.

EX. 27. ALLEMANDE. (*Slow.*)

DUMONT.

* We should make special acknowledgment of the following : Hawkins' *History of Music* ; Stainer and Barrett's *Dictionary of Musical Terms*.

EX. 29 GALLIARD. (Lively.)

FRESCOBALDI.

EX. 30. Gigue or Jig. (*Lively.*)

ECCLER.

EX. 31. SARABANDE (*Slow and stately.*)

PURCELL.

Other dances were the *Bourrée*, *Carillon*, *Chaconne*, *Cotillon*, *Minuet*, *Passepied* (a variety of the minuet), *Polacca*, *Pavaine*, *Passecaïlle*, *Musette*, *Tarentella*, *Hornpipe* (a species of *figue*), *Rigadoon*, &c. Most of these dances were in use in the times of Elizabeth and Louis XIV., while the minuet and the gavotte remained fashionable at Court for a long time afterwards. The *suites* were written principally for the harpsichord, but

also for strings, and for the organ. Many *suites* were arranged for violins and harpsichord, with a *basso continuo*, or figured bass for the latter. Among the most distinguished writers of *suites* are Corelli, Bach, Purcell, Handel, Couperin, Kühnau, Domenico Scarlatti, Alberti, &c.

28. Lutes and viols (of which more hereafter) were long employed only as accompaniments to the voice. Hawkins writes: "Concerning compositions of many parts adapted to viols, of which there are many, it is to be observed, that when the practice of singing madrigals began to decline, and gentlemen and others began to excel in their performance on the viol, the musicians of the time conceived the thought of substituting instrumental music in the place of vocal; and for this purpose some of the most excellent masters of that instrument, namely Dowland, the younger Ferabosco, Coperario, Jenkins, Dr. Wilson, and many others, betook themselves to the framing compositions called *Fantazias*, which were generally in six parts, answering to the number of viols in a set or chest, . . . and abounded in fugues, little responsive passages, and all those other elegancies observable in the structure and contrivance of the madrigal." As we have seen, viols were afterwards employed in *suites-des-pièces*.

29. It is to the *suite* that we owe the *Sonata*, justly regarded as one of the highest forms of composition. The primitive sonata, however, is scarcely to be identified with the class of composition now bearing that name. Those of Frescobaldi and others of this time are mostly single movements, and are sometimes called *Canzone*. In Purcell's time the sonata generally consisted of three or more movements; the celebrated *Golden Sonata*, for two violins and a figured bass (by Purcell), is in five movements—*Largo*, *Adagio*, *Canzona** *Allegro*, *Grave*, and *Allegro*, all (except the fourth

* The term *Canzona* is to be noted here.

movement, which is in the relative minor) being in the key of F. The *Sonata di Chiesa*, belonging to about the same period, consisted, as the name implies (*Church Sonata*), of slow and solemn movements, mostly adapted to the organ, while the secular and more lively composition was denominated *Sonata di Camera* (*Chamber Sonata*). The movements usual in the modern Sonata are, 1. The *Allegro*. This is the most important of all as to its form, which is of the kind commonly called *Sonata*, or more correctly, Binary; i. e. it consists of two subjects or themes, the first in the tonic, the second in the dominant,—or relative major if the first theme be in a minor key,—and the development and recurrence of these two themes are to a great extent guided by established rules, though much is left to the individual skill and style of the composer. The modern binary form was developed by Haydn; after him came Mozart; while Beethoven perfected it in his well-known sonatas and symphonies. 2. The *Andante* or *Adagio*. This movement, usually with one principal theme, *cantabile*, is generally in a related key other than that of the dominant; e. g. if the first movement be written in the key of C, the *Andante* may be in F. 3. The *Minuet* or *Scherzo*. The latter, a more vigorous movement than the Minuet, was introduced by Beethoven. 4. *Allegro* or *Presto*. This is written in the original key (the same as that of the first movement) and is generally of a freer character—the Rondo form, consisting of only one principal theme of somewhat frequent recurrence. But the forms of these after-movements are not so essential to the sonata as that of the first. In some compositions the second and last movements will be found to be written in strict binary form; while in others even the first movement will be found wanting in the essentials of the “sonata” proper. Thus, the first movement of Beethoven’s popular “Sonata in A flat” (*Op. 26*) is nothing more than an “air with variations.” while the sonatas of Schubert are

particularly erratic as to form. Sonatas have been written for the violin, the organ, the harpsichord or pianoforte, and for other instruments; the following are the names of the principal composers who have written for the harpsichord, and later on for the pianoforte :—

Suites and (Early) Sonatas for Harpsichord.

Graziani (1609—1672).
 Cesti (1624—1675).
 Lully (1634—1687).
 Biber (1648—1698).
 Corelli (1653—1713).
 Purcell (1658—1695).
 A. Scarlatti (1659—1725).
 Kühnau (1667—1722).
 Buononcini (1672—1750).
 Albinoni (1674—1745).
 Mattheson (1681—1722).
 D. Scarlatti (1683—1757).
 Durante (1684—1755).
 J. S. Bach (1685—1750).
 Handel (1685—1750).
 Alberti (1705—1745).
 Boyce (1710—1779).
 W. F. Bach (1710—1784).
 C. P. E. Bach (1711—1788).
 Schobert (c. 1750).

Modern Sonatas for the Pianoforte.

Haydn (1732—1809).
 Clementi (1752—1832).
 Mozart (1756—1791).
 Pleyel (1757—1831).
 Dussek (1761—1812).
 Steibelt (1764—1823).
 Beethoven (1770—1827).
 Cramer (1771—1858).
 Hummel (1778—1837).
 Field (1782—1837).
 Ferd. Ries (1784—1838).
 Kalkbrenner (1784—1846).

Modern Sonatas for the Pianoforte.

Onslow (1784—1853).
Weber (1786—1826).
Czerny (1794—1868).
Moscheles (1794—1870).
Schubert (1797—1828).
Schumann (1810—1856).
Mendelssohn (1809—1847).
Chopin (1810—1849).
Henselt (b. 1814).
Sterndale Bennett (1816—1875).

It should be added that the above composers were more or less distinguished as performers on the harpsichord or pianoforte.

30. The *Sonata di Camera* has already been mentioned; the class "Chamber Music" (*Musica di Camera*) includes many varieties of composition—all music, in fact, which is capable of performance by a few persons. Songs, glees, pianoforte solos or duets, and other instrumental solos with or without pianoforte accompaniment, would properly come within the category. But the term "Chamber Music" is now commonly used to indicate works written for two or more instrumental performers, of whom there should be only *one* to each part or instrument. Stringed, wood, and even brass instruments of a not too noisy character, have been employed in this species of music. Each performer being a soloist, especial care is taken with each part, so that the skill of the player and the characteristic qualities of his instrument may be suitably displayed. The earliest instrumental chamber music of which anything certain is known was that composed for the "sets of viols," and to which we alluded in par. 27. The "fantasias" of Dowland, Jenkins, and others of that date were generally written in six parts, for the six instruments comprising a "chest of viols." The modern compositions of this class, from the duet to the octet, are usually written in the "sonata" form

described above, and may be familiarly described as sonatas for several instruments in concert, with this distinction, that each part is an individual voice; not a mere contributory to complete harmony. Sammartini (1700—1775), Haydn, Boccherini, Mozart, Viotti, Pleyel, Shield (1754—1829), Grétry, Cherubini, Dussek, B. Romberg, Beethoven, Reicha, Georges Onslow, Hummel, Neukomm, Spohr, Ferdinand Ries, Weber, Fesca, Schneider, Schubert, Mayseder, Hauptmann, Molique, Reissiger, Mendelssohn, Schumann, Bennett, are among the most distinguished composers of chamber-music of the approved type.

31. The history of the *Concerto* may almost be said to run side by side with that of the *Musica di camera*, and may be regarded as forming the link between the latter and the purely orchestral *symphony*. The modern concerto is a composition for one principal instrument and the full orchestra, but the orchestra, although it cannot be regarded in the light of a mere accompaniment, is entirely subservient to the solo instrument, only coming in *fortissimo* when the soloist is in rest.* The most usual concertos are those for the pianoforte, or the violin; but compositions of this kind have been written for the organ (by Handel, &c.), and for almost every orchestral instrument of importance—such as the flute (by Kuhlau), the clarinet (by Weber), and the violoncello (by B. Romberg). The musical form of the earlier concertos by Corelli and others prior to, or contemporary with, Bach, was very similar to that of the “sonata” of the same period; the present form is like that of the symphony, except that the concerto has fewer movements. The *minuet* is seldom, if ever, introduced in the modern concerto. We append a list of the principal composers of concertos.

* There are, of course, occasional exceptions to this rule, especially when the organ, or the pianoforte, is the solo instrument.

For the violin: Corelli, Tartini (1692—1770), Nardini, Lolli (1730—1802), Viotti (1753—1824), Baillot (1771—1842), Beethoven, Paganini (1784—1840), Spohr, De Beriot (1802—1870), Mendelssohn, &c.

For the pianoforte (or harpsichord): J. S. Bach, Handel, Hasse, Sammartini, Friedemann Bach, C. P. E. Bach, J. C. Bach (the foregoing all for the harpsichord), Haydn, Boccherini, Grétry, Dittersdorf, Naumann, Clementi, Mozart, Pleyel, Dussek, Steibelt, Cramer, Beethoven, Weber, and others whose names have been mentioned as composers of pianoforte sonatas.

32. The term **Symphony** has been, and is still, so variously applied as to cause some confusion to young students. The introduction of a few bars usually written in songs is generally so called, while Handel and other composers of that time have inserted in their oratorios or cantatas short *intermezzi* for the orchestra under the same name.* But the symphony proper, in the sense in which it is mentioned throughout this work, is a lengthy and highly elaborated composition for the full orchestra. The construction of the symphony is very similar to that of the pianoforte-sonata, both as regards the employment of the "binary" form and the number and style of the contrasting movements; the only difference being—if difference it can be called—that the movements are more extended than in the ordinary sonata. The symphony is the highest form of orchestral work, and any number of instruments of the same and of various kinds may be employed, while solos for any players can be freely introduced. Beethoven has added voices to one of his symphonies—the ninth, commonly called the *Choral Symphony*. We have already said that any kind of instrument may be employed in the symphony; but the following may be regarded as a fair specimen of the usual score:—

* e. g. the *Pastoral Symphony* in the *Messiah*.

- | | | |
|------------------------|--|-----|
| 1. Flutes, | generally two parts written. | |
| 2. Hautboys, | generally two | " " |
| 3. Clarionets, | generally two | " " |
| 4. Bassoons, | generally two | " " |
| 5. Horns, | two to four | " " |
| 6. Trumpets, | generally two | " " |
| 7. Trombones, | two or three | " " |
| 8. Kettle Drums, | generally two, tuned in 4 th or 5 th . | |
| 9. First Violins, | several instruments to one part. | |
| 10. Second Violins, | " | " |
| 11. Violas (or Tenors) | " | " |
| 12. Violoncelli, | " | " |
| 13. Double Basses, | " | " |

Boccherini was one of the first to write symphonies in correct form, but Haydn is really the founder of the symphonic form as we have it to-day. Mozart elaborated it, Beethoven perfected it. Although many since Beethoven have produced symphonies, some of them really fine works, it cannot be said that any advance either in form or orchestral effect has been made within the last 50 years. Some of the later writers have written a species of shortened symphony, called the *concert-overture*; this is of about the same length as the opera-overture, but more strict as to form. Overtures to well-known operas have always been popular in the concert-room, and the concert-overture is a result of this popularity. Schumann, Mendelssohn, and Bennett; Brahms, and many other living composers, have written this class of orchestral work, which is more modern than the symphony. The following list includes as many writers of symphonies as the student need remember:—

Hasse (1699—1788).

Sammartini (1700—1775).

Haydn (1732—1809), *London Symphonies, Toy Symphonies, &c.*, 118 in all.

Gossec (1734 *—1829), *Symphonie en Re* (F).

* Schlüter erroneously gives the year 1773. Gossec died in his ninety-sixth year.

Boccherini (1740—1806).
 Naumann (1741—1801).
 Grétry (1741—1813).
 Clementi (1752—1832).
 Mozart (1756—1791), *Jupiter Symphony*, and many others.
 Pleyel (1757—1831), 29 symphonies.
 A. Romberg (1769—1821).
 Beethoven (1770—1827), nine symphonies (*Pastorale, Eroica, Choral*, &c.).
 Reicha (1770—1836).
 Neukomm (1778—1858).
 Onslow (1784—1852).
 Spohr (1784—1859), *Die Weihe der Töne (The Power of Sound)*, &c.
 Moscheles (1794—1870).
 Schubert (1797—1828), *Symphony in C*, &c.
 Berlioz (1803—1869), *Romeo et Juliette*, &c.
 Mendelssohn (1809—1847), *Scottish, Reformation*, and other symphonies.
 Schumann (1810—1856), *Symphonies in C, B flat*, &c.
 Liszt (b. 1811), *Faust Symphony, Tasso*, &c.
 Bennett (1816—1875), *Symphony in C minor*, &c.
 Niels Gade (b. 1817).

Amongst other symphonists now living may be mentioned J. Raff, Brahms, Joachim, Rubinstein, Sullivan, Prout, and Silas.

33. Having enumerated the principal forms of instrumental music, it now behoves us to give some account of the ancient and modern musical instruments; we shall, however, confine our attention to those of especial note. Luscinius, in his *Musurgia* (1536), enters into many particulars concerning obsolete instruments, of some of which he supplies excellent wood-cuts: many of these are included in Hawkins' *History of Music*, and to this work we must refer those of our readers who are curious upon the subject. The more interesting among them shall be alluded to in the course of the present section.

34. The precise origin of the *Lyre* (λύρα), one of the most ancient of musical instruments, is wrapped in

obscurity, unless its invention is to be assigned to Jubal, "the father of all that handle the 'harp' and the organ." The lyre is undoubtedly of Asiatic origin, was imported into Egypt, and thence into Greece. It is a stringed instrument, of a size to be held by one hand against the shoulder, while the other hand pulls or "plucks" the strings. It has no neck or frets, consequently the pitch of the strings cannot be altered in playing, as with the "kithara" or guitar genus, to which we shall refer by and bye. The lyre may in fact be regarded as the prototype of the harp, and secondarily of the harpsichord—from which last we immediately derive the pianoforte. Into the old traditions of the Greeks, who attribute the invention of the lyre to Mercury, we shall not enter. Originally the Greek lyre had but four strings; these were increased by Terpander to seven; while later musicians extended the number to eight, ten, fifteen, and, lastly, even to sixteen strings. These strings were attuned to the several Greek modes, and were plucked with the fingers,* as an accompaniment to the voice.

35. The **Harp**, which stands next in relation to the lyre, is one of the most ancient and universal of stringed instruments, and has generally possessed a greater number of strings and consequently a larger compass than the lyre. The shape of the modern harp must be familiar to every reader, and its triangular form is almost identical with that of the Egyptian and Assyrian harps as depicted on the ancient monuments. The further we go back, however, we shall find these instruments more and more bow-like in shape; so that there is good reason to believe that the first idea of the harp was derived from the bow of the archer, the

* Instead of the fingers, a little stick or staff, made of bone, metal, or a quill, and called a *plectrum* (πλήκτρον), was frequently used for this purpose: hence the lyre, kithara, harp, lute, &c., are known as "*plectrical* instruments."

twang of the tightened string or cat-gut when plucked giving forth a more or less definite tone or note. In Wales the harp is still regarded as the national instrument, as it has been from the earliest times ; it is said, however, that the Irish harp is even more ancient, that, in fact, the Britons acquired it from the Irish Celts. The harp has been tuned in various ways, sometimes with a double row of strings (double harp or *Arpa doppia*) proceeding by semitones ; and the *triple* harp—that is, having *three* rows of strings, is otherwise known as the “Welsh harp.” The harp has long been recognized by composers as a valuable instrument in the orchestra. The *Arpa doppia*, or double harp, already mentioned, was employed by Monteverde in his opera *Orfeo*. In Handel’s *Saul* the harp is used as a solo instrument, though the movements written for it are not of a very distinctive character, and might have been played with a similar effect upon the harpsichord. In the scores of several modern operas the harp has been introduced with splendid effect, and Wagner has employed several of these instruments together. The invention of the pedal action has by some been attributed to Hochbrucker, 1720 ; by others to Velter, 1730. This renders it possible that the pedal harp was used in *Saul*, which was composed in 1738-9. In *Esther*, which was produced in 1720, the old Welsh harp was employed. About a century later (1820) Erard introduced the *double* action, by which means the strings may be raised two semitones, thus affording greater facility for modulation. The older, or *single*-action harp, had seven pedals, raising the notes respectively affected one semitone only ; the usual compass of this instrument was nearly six octaves, its normal scale being that of E flat.

36. The **Spinnet** (or Spinnet), sometimes called “the Couched Harp,” was a keyed instrument, and was the prototype of the harpsichord. By some writers it is mentioned as identical with the **Virginals**, described

by Luscinius in his *Musurgia* (1536). Certain it is that the action, compass, and shape of the instruments were very similar, if not identical. Either instrument had a single string for each note, which was sounded by the plectral action of a quill and jack set in motion by the key. The compass varied between three and four octaves, commencing from C or F below the bass stave. The smaller instruments were generally placed upon a table while being played upon. We have before alluded to the "Virginals" as the favourite musical instrument of Queen Elizabeth, for whom Dr. Tye composed many little "pieces" or studies. Byrde also wrote several compositions for the Virginals, which were printed in the collection known as Queen Elizabeth's Virginal Book.

37. The **Harpsichord** (Harpicon, Clavicembalo, Clavecin, Cembalo), introduced into this country about the beginning of the seventeenth century, was an enlargement upon the spinet, both as regards power and compass. The notes were produced by the same action as that of the spinet, but in the harpsichord there were two, sometimes three, and even four brass or steel wires to each note, and "stops" were provided, by means of which the tone power could be intensified or diminished at the will of the player. Many instruments had a contrivance for the gradual opening and shutting of the lid, which gave the effect of a swell. Some had, besides, an upper keyboard, with a separate set of single strings which gave an effect similar to that produced by the soft pedal of the modern pianoforte. The usual compass of the harpsichord was five octaves, starting from the lowest bass note F:—

During the latter part of the seventeenth, and the greater portion of the eighteenth centuries, almost every orchestra contained the harpsichord, which occupied an important place in the scores, and was generally played by the conductor. The names of the more distinguished harpsichord players will be found included in the list of composers for that instrument given in paragraph 28 of the present section. A perusal of the harpsichord music of the Bachs and their contemporaries will show that, especially regarding the peculiar action of the instrument, the performers of that time were possessed of a wonderful degree of manipulative skill, some of their compositions being of a character to tax the executive powers of many of the best pianists of our own day. Until the middle of the last century the use of the thumb in playing was not allowed; it was Emmanuel Bach who, in 1753, first introduced a system of "fingering" in which the thumb was admitted. But no method of fingering, nor mechanical contrivance, could make the harpsichord a perfect instrument; it lacked, from the nature of its action, the capacity for producing that subtle, ever-varying "light and shade" which constitutes what is known as "expression."

38. It was the **Pianoforte** (Hammer-clavier) which, possessing the vital power of "expression," eventually superseded the harpsichord. The harp-like shape and the metal wires remained as in the older instrument, but the quills and jacks were displaced by the little hammers with which every one is familiar. Every degree of *piano* and *forte* being thus producible by the touch of the performer, the new instrument obtained its present name by common consent, as indicating a feature hitherto unknown in connection with keyed instruments. The idea of the pianoforte seems to have occurred coincidently to several persons about the same date; the earliest amongst them, however, appears to have been Cristofali, in 1711. The other co-inventors were Marius, Wood, and Schröter. The first noted

maker of pianofortes was Silbermann, whose instruments were much approved by Bach. This great musician does not appear, however, to have discarded the harpsichord in favour of the new instrument. It was not until 1760, ten years after the death of Bach, that the pianoforte came into popular favour. The earliest makers were Stein, Broadwood, Collard, Erard, and others whose names are well known at the present day in connection with pianoforte manufacture. Under the heads "Sonata" and "Concerto" we have mentioned the names of the principal composers for the pianoforte; the same musicians were celebrated likewise as *virtuosi*, or performers upon this instrument. We should, however, add to that list the following artists, who made pianofortes playing their special vocation: Herz, Thalberg, Schuloff; and amongst living celebrities, Hallé, Clara Schumann, Arabella Goddard, Liszt,* Rubinstein,* Von Bülow, Essipoff, Pauer.

39. The Lute, now obsolete, may be regarded as the most important of the many varieties of the *kithara*† genus. The period of the invention of the lute is still a matter of speculation; some say that it is of Asiatic origin. Dante (*d.* 1321) alludes to it in a manner which proves that it was a well-known instrument in his time. Mersennus (*d.* 1640) tells us that the lute consisted of three parts:—first, the table or flat sound-board lying under the lower end of the strings; secondly, the back or body, formed by nine convex ribs jointed together; thirdly, the neck, and in front of it the finger-board, over which nine frets or lines of cat-gut were stretched. The usual number of the strings was six, the five largest being doubled, making eleven strings in all. Many of the later instruments, however,

* *Vide* i. 68, 69.

† The *kithara* was distinguished from the *lyre* in the addition of a neck with frets lying close under the strings, by which means the pitch of each string could be raised by the "stopping" or pressure of the fingers.

had as many as twenty-four strings. The lute was usually tuned as under :

with two strings to each note, the highest excepted. The *Orpharion-lute* had from sixteen to twenty strings, which were of metal instead of cat-gut. The Bass-lute (*Theorbo*, Arch-lute, *Kithara bijuga*) had, as the last name implies, two necks, or, more correctly, two heads and fret-boards of different sizes and placed side by side,—the longer fret-board for the bass strings, and the shorter for the upper and middle strings. The theorbo came into use about the beginning of the seventeenth century, and formed a valuable constituent in the early orchestra. Thomas Mace, in his quaintly-written treatise, *Musick's Monument* (1676), has given an interesting description of the theorbo, for which he was a very popular composer. Music for the lute was written in a peculiar kind of notation, called *tablature*, consisting of letters and other signs upon a six-line stave. Performers on the lute or theorbo were termed “lutenists,” and until recent years existed the office of “Lutenist in the Chapel Royal.” The theorbo fell into disuse about the middle of the last century. Some writers affirm that the latest employment of this instrument in the orchestra was by Francesco Conti, in 1708, but this statement is not correct. Handel used it in his *Ode on Saint Cecilia's Day*, which was composed and produced in 1739, as an accompaniment to the air “The Soft Complaining Flute.” The score is marked “*Liuta*,” but the compass employed

conclusively indicates the theorbo. In old scores we frequently find the part for the theorbo written as a *basso continuo*, or figured bass. Among the most eminent lutenists were Mace, Kapsberger, Lambert, Conti, Gaetano, and Gauthier. Hawkins gives the following specimen of lute music, composed by Thomas Mace :

EX. 32. MY MISTRESS.

THOMAS MACE.

Other varieties of the *kithara* family were the ghittern or cither, the citole, the mandolin (employed by Mozart in *Don Giovanni*), and the guitar, which has enjoyed a more recent popularity. The hackbret or dulcimer may scarcely be said to belong to the same order, as its strings were not "plucked," but beaten by small pellets or hammers, upon the principle of the modern pianoforte.

40. The family of stringed instruments played with a bow has been a very numerous one. The most ancient viol on record appears to be the *ravenstrom* (or *ravanastron*), still played in India by the mendicant monks of Buddha. Tradition says that this primitive instrument was invented by one of the kings of Ceylon, but as the date assigned to this monarch is somewhere about five thousand years before Christ, the tradition is worth very little indeed. It is said, however, that the *ravenstrom* was the precursor of the *goudok*, as

Russian fiddle; and the Welsh *crwth*, which had six strings strung across a flat bridge, and was played partly with the bow, and partly by plucking with the fingers. Another ancient variety is the *urh-heen* of the Chinese, which consists of a mallet-shaped box, into which a stick or tube is fixed, with three or four strings strung from pegs at one end of the stick and passing over a bridge fixed upon the mallet-like box. The *trumpet-marine* consisted of a triangular box with one string strung across a very low bridge. From the *rebab* of Egypt, a single-stringed fiddle with a square-shaped body, is probably derived the *rebec*, a three-stringed instrument in shape more nearly resembling the modern violin. From the *rebec* sprang in fact the family of viols to which frequent allusion has been made. The *Viol*, or *vitula*, dates from the tenth or eleventh century; it usually had six strings, and the finger-board was furnished with frets. The size of the viol was approximate to that of the viola, or tenor violin now used in the orchestra. The "chest of viols" has been described by an old writer as "a large hutch with several apartments and partitions in it, each lined with green baize. Every instrument was sized in bigness according to the part played upon it, the treble being the smallest," &c. A model chest of viols contained six instruments,—two trebles, two tenors, and two basses. From the chest of viols we obtain the **Violoncello**; also the *Viol-da-gamba*, or leg-viol, so called from the position in which it is held by the performer. The finger-board of the *gamba* was provided with frets, and the strings, six in number, were thus tuned:

The viol-da-gamba was an instrument much favoured by Bach, who wrote *obligati* parts for it in some of his

scores—one notable instance occurs in the *Passion* according to St. Matthew. Bach invented a similar instrument, having a somewhat higher compass, which he named *Viola pomposa*, but this was soon superseded by the violoncello. The *Baryton*, or *Viol-di-Bardone*, was another instrument of the viol class, having six to seven cat-gut strings played with the bow, under which lay sixteen metal strings which were plucked with the fingers of the left hand. Prince Esterhazy, the patron of Haydn, was exceedingly fond of this instrument, for which Haydn composed upwards of one hundred and sixty studies. A very similar instrument, both as to the number of cat-gut strings and the metal strings beneath, was the *Viol-d'amour*, which Meyerbeer has employed for a special effect in *Les Huguenots*. The **Double bass** (*contra-basso*), the largest of all the viols, is said to have been invented by Salo, in 1580; Montclair introduced it into the orchestra in 1696.

41. The actual inventor of the **Violin**, or little viol, is not known, nor yet the precise date of its introduction. The earliest mention of the instrument as a constituent of the orchestra seems to be that given by Monteverde in the list of the orchestra at the performance of his *Orfeo*, 1650 :—" *Duoi violini piccoli alla Francese* ;"—two little violins of the French sort. But that at this date the violin was not a novelty is patent from the fact that the violin manufacture was commenced by the elder AMATI about the year 1600. We further hear of one BALTAZARINI giving violin performances in England in 1577. From the recent research of a German antiquarian it seems tolerably conclusive that the violin manufacture was initiated in Germany, and was imported thence into Italy. The principal Italian makers of the seventeenth century were the AMATI, the GUARNERI, and the STRADIVARI families (all of Cremona), who so jealously guarded the peculiar secrets of their manufacture, that no modern maker has so far been able to reproduce instruments of the same quality.

Others of the same period were JACOBUS STAINER or STEINER, ALBANUS, and the KLOTZ family—these were the principal German makers. The following distinguished violinists are named in approximate chronological order: BALTAZARINI, LULLY, BALTZAR, BANISTER, BASSANI, CORELLI, TARTINI, LOCATELLI, JARNOVIK, BITTI, ALBINONI, GIARDINI, CAMPAGNOLI, LUNATI, DIEUPART, PERGOLES, LE CLAIR, GEMINIANI, LOLLI, VIOTTI, BAILLOT, KREUTZER, RODE, MAYSEDER, PAGANINI, LAFONT, SPOHR, DE BÉRIOT. The principal violinists of the present day it is unnecessary to mention.

42. Among WIND INSTRUMENTS, probably the most ancient is the *Flute*, of which there have been many varieties. The word "flute" is supposed to be derived from *futa*, a lamprey, or small eel, which has on its side seven marks or holes corresponding to those of the instrument. The flute was exceedingly popular with both the Greeks and the Romans, who introduced flute playing into their religious ceremonies, and almost on every public occasion—indeed, even at their funerals. At first, and until a comparatively recent date, the mouth-piece and shape of the flute was not unlike the flageolet. Some flutes were "double," i.e., having two tubes connected with a single mouth-piece. Luscinius describes flutes of four sizes, ranging from treble to bass. The *Recorder*, frequently alluded to by the old English writers, was a kind of flageolet, and varied in length from about twelve inches to three feet, the largest being the *Bass Recorder*. The *Pilgrim's Staff* was the name given to one kind of flute from its great length and consequent resemblance to the staves carried by religious pilgrims in their processions. The *Cornet*, not to be confounded with the modern brass instrument of the same name, was a bow-shaped flute, tapering towards the mouth-piece, and came into use in the reign of Elizabeth. The tone of the cornet was regarded as very closely resembling the human voice, and for this reason, at the Restoration, when Cathedral

choristers were yet very scarce, owing to the discouragement of choral services by the Puritans, this instrument was used to strengthen the treble parts. The old English flute, or *flute-à-bec*,—so called because the mouth-piece had some resemblance to the bill or “beak” of a bird,—was the flute commonly used in the orchestra up to the time of Handel, who introduces into some of his scores the modern horizontal or German flute (*flauto traverso*), as the *traverso*, evidently to distinguish it from the *flute-à-bec*, still in general use in his day.

43. Of the present REED INSTRUMENTS the Oboe (or *hautboy*) is one of the oldest. Its use in England may be traced as far back as the fourteenth century. They were employed in the court band of Edward III., and were then known as *weyghtes* or *waites*; and it is further supposed that the Christmas “waits” derived their appellation from the fact that these *waites* or *hautboys* were a prominent feature of those nocturnal entertainments. In the plays of Shakespeare, we find frequent allusion to the “hautboys” in the stage directions announcing the entry of royal or martial pageants. The *Corno Inglese* (*Cor Anglais*) is, familiarly speaking, a larger oboe, and forms the “alto” of the smaller instrument. The *Orfeo* of Gluck contains a part for this instrument, as well as the overture in Rossini's *Guillaume Tell*; while Meyerbeer has introduced it into many of his scores. The instrument has also been employed by Wagner and some other modern writers. The “natural bass” of the above instruments is the Bassoon (called in Italian *fagotto*, from its resemblance, when the parts are severed and tied together, to a bundle of sticks or faggots), said to have been invented in the year 1539 by an Italian named Afranio, but there is no doubt that it was of much earlier date, though of different shape and compass, and was known as the *Bombard*, or Bass *Weyghte*. It is not, however, to be confounded with the *Bassoon* mentioned by Luscinius, which was really a bass

instrument of the trombone (or sackbut) class. Handel was one of the first among important composers to introduce the bassoon into the orchestra, and his use of the instrument in *Saul* (in the Incantation scene, *Infernal Spirits*, and *Why hast thou forced me?*) is an instance well known to musicians. The same master has employed the bassoon to great advantage in *Thou didst blow*, in *Israel in Egypt*. Since Handel's time the bassoon has taken an important place in the orchestra. The *Double Bassoon*, the compass of which is an octave below that of the bassoon, was first introduced into the orchestra at the Handel Commemoration in Westminster Abbey, 1784. Owing to the unwieldy size of the instrument it has been very sparingly employed by musicians; nevertheless Beethoven has introduced it in two of his symphonies—the C minor, and the “Choral,” with imposing effect.

44. The modern Clarinet was the invention of Denner of Nuremberg, in 1690; some writers, however, give the date as 1720. Its predecessor was the *Chalameau*,* or *Schalmey*, sometimes mentioned as the precursor of the oboe. The term “chalameau” is still employed to denote the lower and middle registers of the clarinet, which was first used in the orchestra about the middle of the last century. It had a place in the score of an opera, *Orione*, by J. C. Bach (a son of the great master), composed about 1760. The alto and bass clarinets are simply larger varieties of the smaller instrument, each producing a correspondingly lower compass. The *Basset-Horn* (*Corno di bassetto*), which has been described as taking an intermediate place between the clarinet and bassoon, is of comparatively modern date, although seldom used in modern scores. Lotz, of Presburg, in Germany, introduced it in 1782; and Mozart appears to be the first master of note who adopted it. His *Clemenza di Tito*, and more notably

* From *salamus*, a reed.

still, the *Requiem*, both contain remarkable illustrations of the striking properties, the individual excellencies of this much neglected instrument. The *Basset-Horn* resembles in shape a large clarinet, having a metal bell. The compass of the instrument ranges from the lower bass F to the middle C in the treble stave. The instrument might be considered obsolete but for its employment in military bands. The *Serpent*, which dates from 1590, scarcely belongs to the clarinet class, but it may be mentioned here in concluding our notice of wood instruments. The *Serpent* has a compass similar to that of the bassoon, but its alleged uncertainty of tone-production has long since brought it into disfavour, although we have heard it remarked by instrumentalists of experience, that in the hands of a skilful player it could still be made to form a most valuable addition to the orchestra of the present day.

45. We can only glance at the principal members of the numerous family of BRASS INSTRUMENTS. The *Horn (Corno)*, though the least assertive among brass instruments, adds so greatly to the colouring of symphonic music, that it has always occupied an honoured place in the orchestra. It is also one of the most ancient of instruments, being at least of mediæval origin. The Horn for which Beethoven and other great masters wrote, is the primitive one called the French Horn, which simply produces the natural harmonics of the open tube, other notes, always sparingly used, being artificially formed by the insertion of the hand in the bell. In 1748, Hampel, a German, invented a plan for the production of the semitones; Kölbel, Müller, and others tried further improvements, but the later invention of Saxe (the use of pistons) completely overcame the mechanical difficulties, while at the same time the tone of the instrument deteriorated. The *Trumpet (Clurino, tromba)* is of equal antiquity with the horn, and its notes are similarly produced, but of higher pitch and more brilliant tone. The scores of the last

century show that the trumpets of that time were capable of producing higher notes than at the present day, the probability being that the instruments were then altogether smaller in the tube and bell.* The Trombone, formerly known as the *sackbut*, figured in the scores of the sixteenth century. G. Gabrieli (1540—1612) employed four sackbuts in the accompaniments to his *Surrexit Christus*, and at this the musician is inclined to smile; but it is not improbable that they were used to double or lead the voice parts, each represented by a goodly number of singers. Again, the trombone was included in the score of Monteverdi's *Orfeo*. The presence of the trombone in some of Handel's scores has been ascribed to Mozart, but this is now considered more than doubtful. There are four species or sizes of trombone, the soprano, the alto, the tenor, and the bass. The first and fourth kinds are seldom now used; the latter owing to its being fatiguing to the performer, and of sluggish utterance. Other bass instruments are the *Bombardon*, the *Tuba*, the *Euphonium*, of comparatively recent date; and the *Ophicleide*, which was invented to supersede the serpent in the orchestra.

46. It now remains to us to give a short summary of the development of the Organ, the most comprehensive of all instruments. In histories of the organ it is usual to give a description of a small collection of pipes worked by hydraulic action, known as "the water-organ of the ancients;" but although diagrams are supplied with the description, the account is somewhat apocryphal. The *Magrepha*, or organ of ten pipes, with a keyboard, is alleged to have existed in the second century, but doubts have been expressed regarding the nature of this instrument also. It is, however, an historical fact, that an organ, the gift of

* The *Claret*, *Felt*, and *Thürnerhorn*, mentioned by Luscinus were all ancient varieties of the Clarion or trumpet.

Constantine, was in the possession of King Pepin of France *circa* A.D. 757. Still earlier (*circa* 700), Aldhelm, a monk, makes mention of an organ with "gilt pipes," though he gives no clue to the size of the instrument. In the tenth century, an organ having 400 pipes is mentioned by Wolstan; the organ was played with "keys," and was blown by thirteen separate pairs of bellows. Drawings of this period still extant represent the organ as an instrument having but few pipes, blown with evident labour by two or more persons, and played upon by a monk. The keys of these organs were of wood, of from three to six inches in breadth, and requiring to be played upon by hard blows of the fist. Thus it is plain that these instruments were not capable of yielding more than the plain song or melody of ancient Church music, or at most, the crude *organum* or diaphony to which we have elsewhere alluded. The "half-notes," or semitones, were introduced at Venice about the end of the eleventh century; even at this date the compass of the instrument was limited to two octaves. The invention of the organ pedal is attributed to Bernhardt, * about 1490; and the compass was an octave from B flat or A. These pedals were nothing more than small pieces of wood of a size to be played with the toe—in fact, the heel was not used until a comparatively recent period. The "swell organ" was first introduced by Jordan in 1712; the Venetian swell, by which a more gradual *crescendo* and *diminuendo* is effected was the invention of England, towards the end of the last century. The swell was further improved by Green, a well-known organ-builder of the same period. As the organ developed, in the course of time, into the character of a solo instrument,† the ingenuity of musicians and organ-builders (who

† The *Regale*, or *Regale*, was a small portable organ (now obsolete), in use during the sixteenth and seventeenth centuries. This, probably, was the instrument which proved so great a solace to Milton in his blindness.

* *Vide* i. 24.

were as great enthusiasts in their calling as the Italian violin-makers were in theirs) was exercised in the production of new varieties of tone and register. The smaller wind-instruments were more or less successfully imitated, and their names are still associated with certain organ-stops—notably the *Krumhorne* (*Cremorne*, *Cremona*), the *Gemshorn*, and the *Hohl flöte*. The most celebrated builders in England during the last century were Abraham Jordan, "Father" Schmidt, Harris, Suetzler, Schröder, Avery, Byfield, and Green. Organ-playing as a separate art undoubtedly owes much to Frescobaldi, who has been called "The father of organ-playing;" he wrote fugues and other compositions in which he expressly studied the capacities of the instrument of his day. The following list of celebrated organists includes those chiefly who were reputed for their special skill as performers, or composers of organ-music. We have not thought it necessary to mention living organists:—

Dr. John Bull (1563—1622).
 Viadana (1560—1625).
 Frescobaldi (1580—1640).
 Gibbons (1583—1625).
 Kerl (1625—1690).
 Froberger (1637—1695).
 Buxtehude (c. 1640—1707).
 Stradella (1645—1678).
 Blow (1648—1708).
 Purcell (1658—1695).
 Couperin (1668—1733).
 Caldara (1678—1763).
 Mattheson (1681—1764).
 Walther (1683—1729).
 J. S. Bach (1685—1750).
 Handel (1685—1759).
 Hasse (1699—1783).
 Boyce (1710—1779).
 Marpurg (1719—1789).
 Albrechtsberger (1736—1809).
 Stadler (1748—1833).
 Vogler (1749—1818).

Rink (1770—1846).

Mendelssohn (1809—1847).

S. Sebastian Wesley (*d.* 1876).

George Cooper (*d.* 1876).

47. The foremost among INSTRUMENTS OF PERCUSSION is the **Drum** (*tambour*, tympanum), consisting of a hollow hemisphere or cylinder of wood or metal, over the mouth or ends of which is placed a skin or parchment, in tension. The pitch of the note produced may be raised or lowered by the tightening or slackening, as the case may be, of the parchment disc; this being effected by screws or bracings of leather working upon cords. The drum most commonly used in the orchestra is the hemispherical or "*kettle-drum*," generally a pair tuned at the distance of a fourth or fifth from each other—tonic and dominant. Beethoven has produced some remarkable effects from the drum—for example, the enharmonic change in the first movement of the fourth symphony (in B flat), when the original tonic (B flat) drum is unexpectedly employed as A \sharp . Berlioz, than whom no man better understood the resources of the orchestra, made a special study of the drum; and in his Requiem upon the death of Napoleon I. introduced several sets of kettle-drums *sordini*. The great or long drum (*bass drum*, *grosse caisse*) is very sparingly used by composers, who employ it only in *fortissimi* passages, such as in the chorus "*Come with torches*" in the *Walpurgis Night* of Mendelssohn. The *Glockenspiel* is a frame of bells—sometimes of steel bars, possessing a fair compass of simply diatonic intervals, and struck with hammers, with the hand, or by keys as in the pianoforte. Mozart uses a glockenspiel with exquisite effect in his *Zauberflöte*. The *Carillon* which Handel used in *Saul* was an instrument very similar to, if not identical with, the glockenspiel.

48. In the above review—necessarily cursory—of the principal musical instruments, past and present, we have mainly followed the plan adopted by Berlioz in

his *Treatise on Instrumentation*; and, like him, we have reserved to the last our mention of that most exalted of all "instruments of music," the HUMAN VOICE. We have already, in our first section (i. 8, 9, 11, 12, 13, 29), alluded to the schools of singing founded by Ambrose, Gregory, Charlemagne, and other early patrons of music, or musicians, in connection with ecclesiastical music. Of the early institution of church choirs we have already treated in the present section (par. 3), and with the growth of the contrapuntal art may be traced the development of choral harmony, with its divisions of soprano, alto or contralto, tenor and bass. With respect to solo-singing, we have to look to the troubadours, the minnesänger, and other secular vocalists for the birth of the present art, but more immediately to the opera, which gave a new and larger scope for vocal skill. In the earlier days of the opera the female as well as the male characters were acted by men (for a long time women were not allowed upon the stage), to which end, by an artificial process, the treble voice of boyhood was preserved to them through life. Among such male *soprani* may be mentioned, Senesino, Bernacchi, Caffarelli, Farinelli; in fact, male *soprani* continued in favour with the public long after the advent of female opera singers. Of the latter, Hawkins gives a long list, of which we may note the following: San Nicola, Santini (afterwards the wife of Antonio Lotti), Boschi, Mrs. Tofts, Maria Gallia (who took the part of *Rosamund* in Clayton's opera of that name), Margarita de l'Epine, Mrs. Barbier, Anastasia Robinson (afterwards Countess of Peterborough), Faustina; other celebrated female singers of the last century were Tesi, Cuzzoni, Francesca Gabrieli, Mrs. Billington, &c. Belonging to the present century were Catalani (d. 1849), Sontag, Clara Novello, Pasta, Jenny Lind, Malibran, Giulia and Giulietta Grisi, Mara, Alboni, Titiens (d. 1877), Patti, Nillson, Patey; some of whom are still living, and some in retirement. Among the tenor and

bass singers of the last fifty years are: Tamburini, Lablache, Staudigl, Wachtel, Rubini, Raff, Kelly, Mario, Braham, Sims Reeves, Santley, &c. Many of these artists distinguished themselves in oratorio as well as in opera.

49. The ancient schools of singing have been succeeded by *Conservatoires* or Academies, where every branch of the musical art is cultivated and taught. Amongst the Academies which possess an historic fame are the Conservatoires of Milan, Bologna, Berlin, Leipsic, Paris, and the Royal Academy of Music in London. The Royal Academy of Music, which was founded in 1822, and afterwards incorporated by Charter, has passed through many vicissitudes, but has succeeded in establishing for itself a position worthy of the English nation, and has given to the world many esteemed musicians, of whom the late Sterndale Bennett is a notable instance. Other institutions established for the promotion of musical learning are, the College of Organists, established in 1864, for the benefit of organists and other church musicians; Trinity College, London, instituted in 1872, and afterwards incorporated by Charter, for the promotion of musical and general education; the National Training School for Music, which commenced its useful work in 1876; the Royal Irish Academy of Music; and other important institutions, all of which, in their several capacities and spheres of work, have combined to further the musical progress of this country. Nor can we omit a reference to the Tonic Sol-fa movement, which for several years has been spreading through our own and other English-speaking countries, and has undoubtedly done much to improve the musical knowledge and taste of the masses. In 1875, the leaders of the movement obtained a Charter for an institution which bears the name of the Tonic Sol-fa College, and many connexional choral bodies have been formed, and trained on the Tonic Sol-fa principles, the most important of which are the

syllabic notation and the "Moveable Do." It is not within the province of this work to discuss the merits or demerits of this system, about which there has been much unprofitable controversy.

50. It now only remains to us to enumerate the principal writers on the Science of music. The voluminous Latin Treatise of BOËTHIUS (*d.* 525) was based to a great extent upon the ancient dissertations of Pythagoras, Aristoxenus, Ptolemy, and others, and entered with great minuteness into the mathematical ratios of intervals, dealing of course with the old Greek scales. CASSIODORUS (*c.* 470—560), a distinguished scholar of the same period, also wrote concerning the science of music, but added little or nothing to the extensive and somewhat mystic lore amassed by Boëthius. Allusion has already been made to the more practical treatises of Guido, Isidore of Seville, and Franco of Cologne. Succeeding writers, such as Odington, Tinctor, De Handlo, Gaffurius, Franchinus, and others, founded their observations on the Boëthian and Guidonian systems. The inauguration of the modern science is due chiefly to *Dr. William Holder* (*d.* 1697) and *Rameau* (1683—1764). *Dr. Holder's* treatise on *Harmony* (1694) is worthy of note as containing the scheme of natural harmonics, familiarized to us by the later works of Logier and Ouseley. *Hawkins* thus summarizes this portion of *Dr. Holder's* work: "He makes a concord to consist in the coincidence of the vibrations of the chords of two instruments, and speaks to this purpose:—If the vibrations correspond in every course and recourse, the concord produced will be the unison; if the ratio of the vibrations be as 2 to 1, in which case they will unite alternately, viz., at every course, crossing at the recourse, the concord will be the octave. If the vibrations be in the ratio of 3 to 2, their sounds will consort in a fifth, uniting after every second, *i. e.*, at every other or third course; and if as 4 to 3, in a diatessaron or fourth, uniting after every

third recourse, viz., at every fourth course, and so of the other consonances according to their respective ratios." On that part of the theory of music which relates to the formation or derivation of chords there have been many writers, but among these none has, we imagine, been the cause of so much controversy among musicians as the theories of Dr. Day, whose chief exponent at the present time is Professor Macfarren. To explain the respective doctrines held by Day, Onseley, and Stainer would need, to do justice to the subject, a separate work; here we can only assure the young student that whatever differences may exist among theorists as to the etymology of a chord (*a. g.*, whether it has one root or two roots) the mode of its employment and resolution are identical in every case—that is, the practical effect is the same. The harmony treatises of Crotch, Catel, Callcott, and Goss, have dealt almost exclusively with the practical side of the subject. The works of the three former writers, however, are generally regarded as being "behind the times." Of Counterpoint and Fugue the most prominent expositors have been: Zarlino (1517—1593), *Fux*, or Fuchs (1660—1732), Padre Martini (1706—1784), *Marpurg* (1718—1795), Albrechtsberger (1736—1809), *Cherubini* (1760—1842), and *Reicha* (1770—1836). Bach's *Art of Fugue*, published in 1748, is simply a collection of fine examples, all on one subject, of this form of composition. Chief among the critics, historians, and miscellaneous writers on musical science and art, during the past and present centuries are: J. Mattheson (1681—1764), essayist and historian; J. J. Rousseau (1712—1778), essayist; Sir John Hawkins (1720—1791), historian; Dr. Charles Burney (1726—1814), historian; O. F. Langlé (1741—1807), theorist; Grétry (1741—1813), essayist; J. N. Forkel (1749—1818), essayist and historian; C. F. Zelter (1758—1832), essayist; A. E. Choron (1772—1834), theorist; Giuseppe Baini (1775—1844), historian; F. J. Fétis (1784—1872), essayist and

historian; A. B. Marx (1799—1866), theorist; H. Berlioz (1803—1869), essayist; R. Schumann (1810—1856), essayist; also Ambros, Liszt, Engel, Rimbault, Chappell, Hullah, Ritter, &c., &c.

51. There is, however, another and a distinct class of musical philosophers, whom we may call the **SCIENTISTS** of the present day; men whose researches as physicists have led them into a special inquiry into the natural laws and phenomena of sound. To this class belong Wheatstone, Tyndal, Blaserna, and many others whose names must be familiar to every reader of contemporary musical literature. But undoubtedly the most distinguished amongst musical scientists is **HELMHOLTZ**, the German physicist and physician, whose work *Die Lehre von den Tonempfindungen*, recently translated into English by Mr. A. J. Ellis, has opened, as it were, a new world to the view of the musician. It may be said that the art of music profits little by these physical discoveries; but while the science is still in its infancy, we cannot predicate with certainty concerning the result of all this recent research. It may be that, at any moment, while the pen is in the hand, or the lips are moved to speech, some sudden burst of light, some new and splendid apocalypse, shall, by the instrumentality of science, irradiate the whole world of music, revealing forms of beauty, and spheres of vision, hitherto beclouded or unknown.

EXAMINATION QUESTIONS.*

SECTION I.

- 1 What do you know of the musical scales of the Greeks?
- 2 From whom did the Greeks derive the rudiments of their musical knowledge?
- 3 In what sense is the term "Harmony" employed by the Greek writers?
- 4 Who were the most noted among Greek Theorists?
- 5 Who introduced the art of flute-playing into Greece?
- 6 What ancient nation employed Greek slaves as singers and players?
- 7 When may the history of music as a separate art be said to commence?
- 8 About what date, and by whom, was the first singing school instituted in Rome?
- 9 Upon what evidence do we infer that St. Sylvester was acquainted with the method of antiphonal chanting?
- 10 When did St. Ambrose live; and what did he do for Church Music?
- 11 What were the "Authentic Modes?" The "Plagal Modes?" Give a list of them as arranged by St. Gregory.

* The Student is requested to search out for himself the answers to these questions, the numbers prefixed to them having (designedly) no reference to the body of the work.

- 12 What was meant by the term Diaphony? Organum?
- 13 Name some of the improvements effected by Guido in the old system of notation.
- 14 What title has been applied to Guido?
- 15 From what devices are our present C and F clefs derived?
- 16 When was the note *Si* introduced?
- 17 Who introduced the system of musical measure (*musica mensurabilis*)?
- 18 Give the names and shapes of the notes used by Franco.
- 19 What was the state of counterpoint in Franco's time?
- 20 Who was the inventor of "rest" signs?
- 21 Give some account of Adam de la Hale.
- 22 Name some of the most distinguished troubadours of De la Hale's time.
- 23 Who has been credited with having established the first correct principles of consonances and dissonances?
- 24 To whom is ascribed the introduction of florid counterpoint?
- 25 State what you know of Dufay, and of the rise of the Belgian School.
- 26 Which of the early Belgian composers has been styled "the Sebastian Bach of the fifteenth century," and on what grounds?
- 27 What is your impression concerning the character of the "fugues" composed by the early Belgian masters?
- 28 Des Prés effected an important advance in the art of musical composition. What was it?
- 29 Name some of the most distinguished pupils of Des Prés.
- 30 What was Luther's opinion of Des Prés' music?
- 31 A pupil of Des Prés has been styled "the founder of the Venetian School." Give his name.
- 32 To whom is ascribed the introduction of the Madrigal?

- 33 Who was the most distinguished contemporary of Willaert ?
- 34 Who introduced the chromatic element into musical composition ?
- 35 Who was the first to use the terms *Adagio*, *Allegro*, &c. ?
- 36 What were the principal failings of the Belgian School ?
- 37 When was the organ-pedal invented, and by whom ?
- 38 Give the date of the invention of moveable music-types, and the name of the inventor.
- 39 Who has been called the "father of English contrapuntists ?"
- 40 Who wrote the anthem, *I will exalt Thee, O Lord !*
- 41 What was Merbecke's principal work ?
- 42 Give a short account of Thomas Tallis.
- 43 Which of the early English musicians wrote a motett in forty parts ?
- 44 Give the name of a famous canon by William Byrde.
- 45 Who was the first professor of music at Gresham College ?
- 46 What was "The Virginal Book ?" for whom was it written ?
- 47 Give the title of a celebrated collection of madrigals published about the beginning of the seventeenth century, and name some of the principal contributors to the work.
- 48 Who was Costanzo Festa ? What is his place in the history of Church Music ?
- 49 Name a distinguished pupil of Goudimel.
- 50 Give an account of the controversy which occasioned the production of *Missa Papae Marcelli*.
- 51 What was the name given to the style of composition of which *Missa Papae Marcelli* was the inauguration ?
- 52 Who was Nanini ?

- 53 A six-part motett, *Lamentabatur Jacobus*, composed by a Spaniard, is still performed in the Sistine Chapel at Rome. Give the name of the composer.
- 54 In what style of composition did Marenzio particularly excel?
- 55 Who introduced instrumental accompaniments in the music of the Church? Name the instruments employed by this composer.
- 56 Trace the origin of the Opera.
- 57 What was *musica parlante*?
- 58 Give the name, date, and composer of the first Italian Opera.
- 59 On what special occasion was *Euridice* produced?
- 60 To what great composer of the seventeenth century was it reserved to give a more pronounced form to the Opera?
- 61 For what practices was Monteverde subjected to the unfavourable criticisms of his contemporaries?
- 62 Name the principal Operas of Monteverde.
- 63 Give an account of the circumstances attending the rise of Oratorio.
- 64 Account for the term *Oratorio*, as applied to that class of composition.
- 65 What was the first oratorio produced, and who was the composer?
- 66 Name some of the improvements effected in oratorio by Carissimi.
- 67 An oratorio by Carissimi has recently been revived. Give the title.
- 68 Which of the Italian composers is said to have written the first Church concertos and solo songs for the Church?
- 69 Give the earliest known date of the employment of the *basso continuo*, or figured bass.
- 70 Name an accomplished Italian Organist of the seventeenth century.
- 71 Who was "the first to write harmony as distinguished from counterpoint?"

- 72 Name the best-known composition of Allegri.
- 73 To whom is attributed the introduction of the Chorale?
- 74 Who was the "father of German Oratorio?"
- 75 Give the title of the first German Opera, the date of its production, and the name of the composer.
- 76 To what important musical post was Gibbons appointed?
- 77 Name a well-known Anthem by Orlando Gibbons.
- 78 By what well-known composition is Matthew Lock chiefly remembered? Is it universally admitted that Lock composed that work?
- 79 Name "the greatest English musical genius."
- 80 Who was Henry Purcell's master?
- 81 Enumerate the principal amongst Purcell's works.
- 82 Who was Dr. Aldrich?
- 83 Name an anthem by Dr. Croft containing a six part fugue.
- 84 Who composed the celebrated anthem, *Hear my crying*?
- 85 Give a short account of Dr. Boyce, naming some of his principal works.
- 86 A contemporary of Boyce wrote as many as twenty-three operas. Give his name.
- 87 Name an anthem by Battishill, written for seven voices.
- 88 What German composer is supposed to form the link between Schütz and Bach?
- 89 Who wrote *The Bleeding and dying Jesus*? In what respect does the plan of this work differ from that of the Passion-music of Bach?
- 90 Give an account of the career of Sebastian Bach.
- 91 How many Passion-oratorios did Bach write?
- 92 What was the mode of performance originally intended for the *Christmas Oratorio*?
- 93 Did Bach write any music for the Roman Church?
- 94 Describe the *Suites Anglaises*.

- 95 Which of the sons of Sebastian Bach introduced a new system of fingering in clavichord playing?
- 96 Give an account of the earlier years of Handel.
- 97 What was Handel's first opera? His first oratorio?
- 98 From what earlier work was the *Acis and Galatea* of Handel in part derived?
- 99 When and where was Handel's *Esther* first performed?
- 100 Who was the most favoured rival of Handel?
- 101 Where was the *Messiah* first performed, and with what result?
- 102 Give a list of Handel's Oratorios.
- 103 A German contemporary of Handel was much admired by the Italians, who named him "the divine Saxon." Give his name.
- 104 Who was the composer of *Der Tod Jesu*?
- 105 "Mozart was greatly impressed with the beauty of *Medea*." Who composed the opera referred to?
- 106 In what respects did Alessandro Scarlatti improve the opera?
- 107 Name some of the principal masters of fugue in the eighteenth century.
- 108 When and by whom was the Italian Opera introduced into France?
- 109 Who is regarded as the originator of the overture?
- 110 Give an account of *Les Bouffons*. What influence did they exercise upon the lyric stage in France?
- 111 State the circumstances of the rivalry between Gluck and Piccini.
- 112 Who is generally regarded as the founder of the modern symphony?
- 113 Name the principal operas of Mozart.
- 114 Who added to the accompaniments in the *Messiah*?
- 115 What was the *Liedertafel*? Who organized it?
- 116 Which of the French composers in Beethoven's time was in his opinion "the most estimable of living musicians?"

- 117 How many symphonies did Beethoven write?
 - 118 What was the original title of the opera *Fidelio*?
State what you know of the history of this work.
 - 119 To what cause did Beethoven owe much of his command of orchestral resources?
 - 120 What was the nature of Beethoven's physical affliction, and at what period of his career did it become apparent?
 - 121 In what capacity was Hummel considered a formidable rival of Beethoven?
 - 122 Name the most remarkable of the operas composed by Spontini.
 - 123 Relate the circumstances attending the death of Weber.
 - 124 It is said that Weber introduced a new feature in the treatment of the opera-overture; what was it?
 - 125 Who composed *The Erl-King*?
 - 126 When and under what circumstances was the *Lobgesang* produced?
 - 127 Who was the founder and first director of the Leipzig Conservatorium of Music?
 - 128 On what occasion was the *Elijah* produced?
 - 129 What is a remarkable characteristic of Chopin's music?
 - 130 Name a celebrated motett by Dr. Crotch.
 - 131 Give the name of the composer of a concert-overture, entitled *The Wood Nymph*.
-

SECTION II

- 132 Write out, from memory, the principal musical epochs and events of the first five centuries after Christ.

- 133 Who was the principal musician of the eleventh century?
- 134 What remarkable musical event took place in Germany about the year 1200?
- 135 About what period did Franco introduce the system of mensurable music?
- 136 Name the principal musicians of the fourteenth century.
- 137 In the fifteenth century, three celebrated composers were born the same year. Who were they?
- 138 What was the prevalent "School" or style of the thirteenth century?
- 139 Name the principal contemporaries of Tallis, i. English; ii. German; iii. Italian; and assign to each his characteristic as a composer.
- 140 Give the date of the introduction of copper-plate engraving for the printing of music.
- 141 Two celebrated English composers died the same year in the sixteenth century. Name them.
- 142 At what date was the Violin introduced into England; and by whom?
- 143 Give the date of the production of the first opera.
- 144 Give the title and date of the first Oratorio.
- 145 When was the harpsichord introduced into England?
- 146 Give the dates of the first German, English, and French Operas respectively, with their titles and authors.
- 147 When was the *Macbeth Music* published?
- 148 In one year of the seventeenth century two great German musicians were born. Give their names.
- 149 Who were Purcell's contemporaries at home and abroad?
- 150 Give the dates of the production of Handel's *Esther*, *Messiah*, *Israel in Egypt*.
- 151 When was introduced a new system of fingering for the clavichord, and what was the principal innovation?

- 152 In what year took place the first Handel commemoration?
- 153 When was the bassoon introduced into the orchestra?
- 154 When was Haydn's *Creation* produced?
- 155 Name the principal contemporaries of Beethoven.
- 156 In the year 1809 a great German master died, and another distinguished German composer was born. Name them.
- 157 Give the dates of birth and death of Beethoven.
- 158 Give the dates respectively of the invention of pedals to the harp and of the double action by Erard.
- 159 Name six of the most distinguished French composers of the present century.
- 160 Give a list of the leading English musicians during the reign of Queen Victoria.

SECTION III.

- 161 What were the Ambrosian chants?
- 162 Describe the antiphonal mode of singing.
- 163 Define the terms *Decani*, *Cantoris*, *Precentor*.
- 164 Can you account for the origin of the modern major and minor scales?
- 165 Write out the following "Gregorian modes," marking the semitones: Dorian; Phrygian; Hypo-Lydian; Mixo-Lydian.
- 166 Give specimens of *Organum* or Diaphony, as practised by Hucbald or Guido.
- 167 Write out the divisions of the great stave of eleven lines.
- 168 Of how many lines did the stave generally used in the thirteenth century consist?
- 169 Who is supposed to have founded a Chair of Music at Oxford?

- 170 To whom is attributed the invention of the Canon?
- 171 Define *Counterpoint*, *Canon*, *Cantus firmus*.
- 172 Who is to be regarded as the first composer of modern music; and for what reason?
- 173 What was the art of Descant? Faburden? Write a specimen of the latter.
- 174 Describe the orchestra employed at the performance of *L'Anima e Corpo* by the direction of the composer.
- 175 Give a list of the principal composers of Oratorio.
- 176 Enumerate the movements in the *Missa Sollemnis* of the Roman Church.
- 177 What distinguishes the Requiem from the ordinary Mass?
- 178 Name any composers who have written Requiem Masses.
- 179 Describe the various kinds of Anthems in use in the English Church.
- 180 Can you name any peculiarity in the construction of the "Old Hundredth?"
- 181 Describe the Madrigal, and give a list of the most noted composers of madrigals.
- 182 What is *basso continuo*? For what purpose was it introduced, and what is the principal use made of it in the present day?
- 183 Name four operas which may be regarded as so many landmarks in operatic history.
- 184 What are the principal theories of Richard Wagner in regard to the musical drama?
- 185 Who was Metastasio?
- 186 What English monarch employed a band of hautboys?
- 187 Describe some of the principal dance forms in the *suites-des-pièces*.
- 188 Mention some of the most distinguished writers of *suites*.
- 189 What is a "Sonata?"

- 190 Name three great composers who assisted in establishing the modern binary form.
- 191 Define the term *Musica di Camera*.
- 192 What is the place of the Concerto in instrumental music?
- 193 Name any well-known composer who has written a Concerto for the Flute?—for the Clarinet?—for the Organ?
- 194 Define the Symphony, in the old and in the modern sense.
- 195 Who is the “father of the modern Symphony?”
- 196 Give instances of the employment of the harp in oratorios by Handel.
- 197 Describe the Spinnet, the Virginals, and the Harpsichord.
- 198 Mention some of the earliest makers of the *hammer-clavier*. What is the name usually given to this instrument? and for what reason?
- 199 Describe the more important varieties of the Lute.
- 200 Give a brief account of the ancient viol family, and describe the principal bowed instruments now in use.
- 201 Describe the old Cornet, Recorder, and Pilgrim's Staff.
- 202 How do you account for the higher compass of the trumpet as indicated in the orchestral scores of the last century?
- 203 Name as many as you can of the principal organ-builders of the eighteenth century, mentioning the improvements introduced by some of them.
- 204 Mention some of the most celebrated amongst English Organists.
- 205 What great French composer made a special study of the effects to be obtained from the drum?
- 206 Mention some of the greatest female singers of the last and present centuries.

ART AND MUSIC.

A CONCISE HISTORY OF MUSIC. From the commencement of the Christian Era to the present time. By H. G. B. HUNT, B. Mus., Christ Church, Oxford. With numerous Tables, etc. 12mo, \$1.00.

Mr. Hunt has produced a well-arranged and really concise history of the subject with which he deals. The book is divided into three sections, the first of which is a general review of musical epochs and events, while the second presents a series of chronometrical tables, and the third summarizes a history of the art.

CHICAGO TRIBUNE.—“As the book now stands, it is the most concise and correct history of music that we have ever seen compiled as a text book. No musician, and in fact no connoisseur, or person making any pretention to musical taste should be without this little work as a ready reference.”

NEW YORK OBSERVER.—“The subject is one of the most appropriate for study in schools, and we know no other book to be compared with this one for such use. There are bulky books full of information, but this one is concise and methodical.”

BOSTON GLOBE.—“Altogether, this is an admirable compend, worth more than many pretentious works, and quite indispensable to the student of music. As a text book, it seems to be one of the best possible.”

HISTORIES OF MUSIC. By Dr. F. L. RITTER, Director of the School of Music at Vassar College. I.—Music in England. 12mo, \$1.50. II.—Music in America. New and revised edition. 12mo, \$2.00.

THE INDEPENDENT.—“Both these volumes are written on a high plan, with sound standards in view and with abundant knowledge. The volume on our own musical history has nothing to compare with it.”

ART JOURNAL.—“Dr. Ritter's scholarly attainments have well fitted him for this task, and his historical researches have rescued many things from oblivion that deserve to be recorded. The work is a valuable contribution to musical literature, and will be welcomed by amateur and musician alike.”

MUSICAL WORLD.—“We are glad that we saw the publication of the first history of music in this country, for the book has the right tendency, and it will be a constant stream of light that shall disturb the owls and bats in their towers of strength and seclusion, and drive them still further into the backwoods.”

MANUAL OF MUSICAL HISTORY. From the epoch of ancient Greece to our present time. By **FREDERIC LOUIS RITTER**, Mus. Doc. 12mo, 75 cents net.

This Manual of Musical History is intended to serve the music student as an introduction to more elaborate and voluminous works on the history of music, and especially the author's other historical writings.

It has also been devised with a view to furnish the teacher or lecturer, who has under his charge classes in musical history, a reliable brief text book on the subject, leaving it to him to dwell on such additional amplification and explanation as inclination and musical taste may dictate to him.

BOSTON DAILY ADVERTISER.—"This book will be found of great value not only to teachers, but to all those who would have an admirable summary of the leading phases in the artistic development of music. A feature of the book that will be especially prized is the appendix containing the names of the principal structural forms of music, and the principal instruments with their compass, as used in modern orchestras."

HANDBOOK OF DRAWING. By **WILLIAM WALKER**, Teacher of Freehand Drawing in Owen's College, Manchester. With upward of two hundred Woodcuts and Diagrams. 12mo, \$1.75.

The following extract from the author's preface will serve to indicate the object and scope of this book, which is perhaps the first attempt to present the intellectual side of *practical art education* in a form intelligible to the youngest and most untrained mind. The free use of sketches and diagrams renders every step of the argument as clear to the mind of the student as it was to the author's.

EXTRACT FROM THE PREFACE.—"The purpose of this work is to furnish such information on Elementary Art Education as is not likely to be met with in any other compact form. It has been prepared under the guiding principle that all true education consists in the cultivation of the judgment. Books of Examples, good and bad, are in abundance; but the language of art—any more than Greek or German—is not to be learned by merely copying its signs. Art has its grammatical elements and rules and should be studied in its exact delineative and intellectual aspect, as well as in its more emotional expressions."

BOSTON LITERARY WORLD.—"Walker's Handbook of Drawing is by far the most intelligent, perspicuous and suggestive work of its kind which we have seen this long while. It fact we do not remember its equal. In plan and manner it is especially well adapted for a text book, and its profuse illustrations are a great help in conveying the author's idea."

BOSTON COURIER.—"It furnishes in compact form, just such information on elementary art education as the student needs, in order to enable him to make truthful and significant outlines and drawings from models."

THE ESSENTIALS OF PERSPECTIVE. With numerous illustrations drawn by the author. By L. W. MILLER, Principal of the School of Industrial Art of the Pennsylvania Museum, Philadelphia. 1 vol., oblong 8vo, \$1.50.

This work combines the results of long experience and ripe judgment. The style is clear, direct, and practical, and the instructions are happily supplemented by numerous drawings, which, the author informs us, are the same that he has used for many years in teaching perspective from the blackboard.

ART AMATEUR.—"It contains all that the landscape-painter needs of perspective science, put in plain words, and unencumbered by unnecessary demonstrations. Altogether it is an excellent text book."

JOURNAL OF EDUCATION.—"The illustrations with which the book abounds make it of unusual value to the teacher. The mechanical and typographical make-up of the book is without defect. It is just the book to place in the hands of a young person with a natural bent toward art."

N. Y. SUN.—"It is an admirable manual of instruction containing numerous illustrations by the author. He has simplified his work by leaving out of it unessential things with the object of making more clear the really important truths of perspective."

A SHORT HISTORY OF ARCHITECTURE. By ARTHUR LYMAN TUCKERMAN. With illustrations by the author. Crown 8vo, \$1.50.

The author has exercised the most careful judgment in his selection of matter, rejecting all that is unessential, and presenting main facts and important principles in a clear and simple style. The work will be found especially valuable for purposes of instruction, being brief and yet comprehensive, adapted to the needs of beginners and yet containing all that is most important for advanced students to know.

FROM THE PREFACE.—"I have written this short History of Architecture to meet the requirements of those who wish to become acquainted with the main facts without having to read voluminous works. The plan I have adopted has been to trace the origin of each style, its characteristic points, and its connection with those which preceded and succeeded it, without introducing technical terms or any but the most important dates. I hope, therefore, that this volume may be of interest to the general reader and may find its way to schools other than those which make art matters their specialty, for it seems to me that if the average school boy were taught as much about the history of the most useful and beautiful of the creations of the people of each age as about the manner and quantity of warfare and slaughter in which they indulged, he would obtain as valuable a quality of information."

HISTORY AND BIOGRAPHY.

THE DAWN OF HISTORY. An Introduction to Pre-Historic Study. New and revised edition. Edited by C. F. KEARY. 12mo, \$1.25.

This work treats successively of the earliest traces of man in the remains discovered in caves or elsewhere in different parts of Europe; of language, its growth, and the story it tells of the pre-historic users of it; of the races of mankind, early social life, the religions, mythologies, and folk-tales of mankind, and of the history of writing. The present edition contains more than a hundred pages of new matter, in which are embodied the results of the latest researches.

BOSTON SAT. EVE. GAZETTE.—“A fascinating manual, without a vestige of the dullness usually charged against scientific works. In its way, the work is a model of what a popular scientific work should be.”

THE ORIGIN OF NATIONS. By Professor GEORGE RAWLINSON, M.A. 12mo, with maps, \$1.00.

The first part of this book, *Early Civilizations*, discusses the antiquity of civilization in Egypt and the other early nations of the East. The second part, *Ethnic Affinities in the Ancient World*, is an examination of the ethnology of Genesis, showing its accordance with the latest results of modern ethnographical science.

CONGREGATIONALIST.—“A work of genuine scholarly excellence, and a useful offset to a great deal of the superficial current literature on such subjects.”

MANUAL OF MYTHOLOGY. For the Use of Schools, Art Students, and General Readers. Founded on the Works of Petiscus, Preller, and Welcker. By ALEXANDER S. MURRAY, Department of Greek and Roman Antiquities, British Museum. With 45 Plates on tinted paper, representing more than 90 Mythological Subjects. Reprinted from the Second Revised London Edition. Crown 8vo, \$ 1.75.

THE CLEVELAND HERALD.—“It has been acknowledged the best work on the subject to be found in a concise form, and as it embodies the results of the latest researches and discoveries in ancient mythologies, it is superior for school and general purposes as a hand book to any of the so-called standard works.”

THE BOSTON JOURNAL.—“Whether as a manual for reference, a text book for school use, or for the general reader, the book will be found very valuable and interesting.”

CHARLES SCRIBNER'S SONS'

EPOCHS OF HISTORY.

CHARLES KENDALL ADAMS, *President of Cornell University*.—"A Series of concise and carefully prepared volumes on special eras of history. Each is devoted to a group of events of such importance as to entitle it to be regarded as an epoch. Each is also complete in itself, and has no especial connection with the other members of the series. The works are all written by authors selected by the editor on account of some especial qualifications for a portrayal of the period they respectively describe. The volumes form an excellent collection, especially adapted to the wants of a general reader."

NOAH PORTER, *President of Yale College*.—"The 'Epochs of History' seem to me to have been prepared with knowledge and artistic skill to meet the wants of a large number of readers. To the young they furnish an outline or compendium which may serve as an introduction to more extended study. To those who are older they present a convenient sketch of the heads of the knowledge which they have already acquired. The outlines are by no means destitute of spirit, and may be used with great profit for family reading, and in select classes or reading clubs."

BISHOP JOHN F. HURST, *Ex-President of Drew Theological Seminary*.—"It appears to me that the idea of Morris in his Epochs is strictly in harmony with the philosophy of history—namely, that great movements should be treated not according to narrow geographical and national limits and distinction, but universally, according to their place in the general life of the world. The historical Maps and the copious Indices are welcome additions to the volumes."

THE NATION.—"The volumes contain the ripe results of the studies of men who are authorities in their respective fields."

EPOCHS OF ANCIENT HISTORY. A series of books narrating the History of Greece and Rome, and of their relations to other countries at successive epochs. Edited by Rev. G. W. COX, and CHARLES SANKEY, M.A. Eleven volumes, 16mo, with 41 Maps and Plans. Sold separately. Price per vol., \$1.00. The set, Roxburgh style, gilt top, in box, \$11.00.

TROY—ITS LEGEND, HISTORY, AND LITERATURE. By S. G. W. BENJAMIN.
THE GREEKS AND THE PERSIANS. By G. W. COX.

THE ATHENIAN EMPIRE. By G. W. COX.

THE SPARTAN AND THEBAN SUPREMACIES. By CHARLES SANKEY.

THE MACEDONIAN EMPIRE. By A. M. CURTIUS.

EARLY ROME. By W. IHNE.

ROME AND CARTHAGE. The Punic Wars. By R. BOSWORTH SMITH.

THE GRACCHI, MARIUS AND SULLA. By A. H. BEESLEY.

THE ROMAN TRIUMVIRATES. By CHARLES MÉRIVALE.

THE EARLY EMPIRE. By W. WOLFE CAPES.

THE AGE OF THE ANTONINES. By W. WOLFE CAPES.

STANDARD TEXT BOOKS.

EPOCHS OF MODERN HISTORY. A series of books narrating the History of England and Europe at successive epochs subsequent to the Christian era. Edited by **EDWARD E. MORRIS**. Seventeen volumes, 16mo, with 74 Maps, Plans, and Tables. Sold separately. Price per vol., \$1.00. The set, Roxburgh style, gilt top, in box, \$18.00.

THE BEGINNING OF THE MIDDLE AGES. By R. W. CHURCH.

THE NORMANS IN EUROPE. By A. H. JOHNSON.

THE CRUSADES. By G. W. COX, M.A.

THE EARLY PLANTAGENETS. By WM. STUBBS.

EDWARD III. By W. WARBUPTON.

THE HOUSES OF LANCASTER AND YORK. By JAMES GAIRDNER.

THE ERA OF THE PROTESTANT REVOLUTION. By FREDERIC SEEBOHM.
With Notes on Books in English relating to the Reformation. By Prof.
GEORGE P. FISHER, D.D.

THE EARLY TUDORS. Henry VII.; Henry VIII. By C. E. MOBERLY.

THE AGE OF ELIZABETH. By M. CREIGHTON.

THE THIRTY YEARS' WAR, 1618-1648. By SAMUEL RAWSON GARDINER.

THE PURITAN REVOLUTION. By SAMUEL RAWSON GARDINER.

THE ENGLISH RESTORATION AND LOUIS XIV. By OSMUND AIRY.

THE FALL OF THE STUARTS. By EDWARD HALE.

THE AGE OF ANNE. By EDWARD E. MORRIS.

THE EARLY HANOVERIANS. By EDWARD E. MORRIS.

FREDERICK THE GREAT. By F. W. LONGMAN.

THE FRENCH REVOLUTION AND FIRST EMPIRE. By WILLIAM O'CONNOR
MORRIS. With Appendix by ANDREW D. WHITE, LL.D.

THE EPOCH OF REFORM, 1830-1850. By JUSTIN MCCARTHY.

THE HISTORY OF ROME, from the Earliest Time to the Period of its Decline. By Dr. THEODOR MOMMSEN. Translated, with the author's sanction and additions, by W. P. DICKSON, D.D., LL.D. With an Introduction by Dr. Leonhard Schmitz. Reprinted from the Revised London Edition. Four volumes crown 8vo, gilt top. Price per set, \$8.00.

LONDON TIMES.—"A work of the very highest merit; its learning is exact and profound; its narrative full of genius and skill; its descriptions of men are admirably vivid. We wish to place on record our opinion that Dr. Mommsen's is by far the best history of the Decline and Fall of the Roman Commonwealth."

DR. SCHMITZ.—"Since the days of Niebuhr, no work on Roman History has appeared that combines so much to attract, instruct, and charm the reader. Its style—a rare quality in a German author—is vigorous, spirited, and animated. Professor Mommsen's work can stand a comparison with the noblest productions of modern history."
